Inside Your Calculator Gerald R. Rising, 2007-08-27 Uncover the mysteries that lie within your calculator This remarkable book explores the simple internal calculator processes—algorithms and programs—that tell us, for example, that the cosine of  $56^\circ$  is 0.5591929035. Using carefully constructed diagrams and figures, the author effectively demonstrates how calculator keys compute powers, roots, logarithms, and trigonometry functions, while also

providing insights into simple programming, the conversion between decimal and binary numeration, and perhaps most importantly, the structure of our numeration systems. Many people believe that the processes that drive calculators demand advanced mathematical concepts; however, this book proves that a minimal understanding of algebra and geometry is all that is needed to follow the step-by-step explanations of how scientific calculators work. Inside Your Calculator: From Simple Programs to Significant Insights is a complete and multifaceted exercise in critical thinking. This book features:

- A detailed explanation of how to use a graphics calculator and program basic functions
- A discussion of the history of mathematics when appropriate, which provides a foundation for further learning
- Fundamental mathematical lessons and interesting applications of pre-calculus mathematics
- A thorough review of the fundamentals of programming, algebra, and geometry needed to gain insight into why the algorithms work and how the results are meaningful in our lives

While the simultaneous use of a calculator is not needed to gain insight into how the algorithms work, those who do have a programmable graphics calculator can experiment with the programs presented in the book. These programs may be used on TI-84 and TI-83 calculators, and additional information for other Texas Instruments calculators as well as the Casio FX series is available on the book's related web site. As a result of over fifty years of award-winning teaching experience in both high school and college classrooms, Dr. Rising anticipates and answers potential questions from readers, and he successfully brings this subject alive in an illuminating and entertaining way. This book is therefore not only ideal for undergraduate mathematics majors as either a primary or supplemental text, but it also appeals to anyone with an interest in mathematics and its ideas. **How Not to Die** Michael Greger, M.D., FACLM, Gene Stone, 2015-12-08 From the physician behind the wildly popular NutritionFacts website, *How Not to Die* reveals the groundbreaking scientific evidence behind the only diet that can prevent and reverse many of the causes of disease-related death. The vast majority of premature deaths can be prevented through simple changes in diet and lifestyle. In *How Not to Die*, Dr. Michael Greger, the internationally-renowned nutrition expert, physician, and founder of NutritionFacts.org, examines the fifteen top causes of premature death in America- heart disease, various cancers, diabetes, Parkinson's, high blood pressure, and more- and explains how nutritional and lifestyle interventions can sometimes trump prescription pills and other pharmaceutical and surgical approaches, freeing us to live healthier lives. The simple truth is that most doctors are good at treating acute illnesses but bad at preventing chronic disease. The fifteen leading causes of death claim the lives of 1.6 million Americans annually. This doesn't have to be the case. By following Dr. Greger's advice, all of it backed up by strong scientific evidence, you will learn which foods to eat and which lifestyle changes to make to live longer. History of prostate cancer in your family? Put down that glass of milk and add flaxseed to your diet whenever you can. Have high blood pressure? Hibiscus tea can work better than a leading hypertensive drug- and without the side effects. Fighting off liver disease? Drinking coffee can reduce liver inflammation. Battling breast cancer? Consuming soy is associated with prolonged survival. Worried about heart disease (the number 1 killer in the United States)? Switch to a whole-food, plant-based diet, which has been repeatedly shown not just to prevent the disease but often stop it in its tracks. In addition to showing what to eat to help treat the top fifteen causes of death, *How*

Not to Die includes Dr. Greger's Daily Dozen -a checklist of the twelve foods we should consume every day.Full of practical, actionable advice and surprising, cutting edge nutritional science, these doctor's orders are just what we need to live longer, healthier lives.

**HP 35s Scientific Calculator** Merri Meierotto,2021-03-03 While the focus is on the HP 35s, many of the concepts discussed can be used with most programmable calculators. Equally important to the programming approaches are the proposed techniques for monitoring the moves of multiple players and the demonstration of a strategy for offensive and defensive play. The HP 35s User's Guide book is an attempt to supplement the HP 35s User's Guide for those things this author had trouble understanding or discovered only after trial and error. It concentrates on topics such as programming, using memory, using Reverse Polish Notation (RPN), using stack registers, program construction, and working with equations (the equation solver). The book is a general programming guide, rather than a how-to guide for specific specialty areas. It does not discuss integration, mathematical transformations, logical operations, or conversion factors. It assumes RPN (Reverse Polish Notation) throughout. The HP 35s User's Guide book does not cover every aspect of the HP 35s. Therefore it is important to have the HP 35s User's Guide which is available free online.

Program Your Calculator Gerald R. Rising,Dr. Eileen K. Schoaff,Dr. Deborah Moore-russo,2013-06-10 ABOUT THE BOOK:Dr. Gerald Rising and Dr. Deborah Moore-Russo, of the University at Buffalo and Dr. Eileen Schoaff of Buffalo State College wrote Program Your Calculator,” to give a basic introduction to programming with the TI-84 calculator through a series of interesting examples. The publisher is William R. Parks – [www.wrparks.com](http://www.wrparks.com)

The printer is CreateSpace. James Easton, instructor at Erie Community College in Buffalo, NY, finds *Program Your Calculator* a very useful text for both individual and classroom settings, especially at a time when programming is rarely taught in mathematics classes. Easton said, Students gain much insight into mathematical concepts through programming. The book opens that opportunity to them and triples the power of the calculator. Professor Rising explains why he considers their book important: Check any science lab or engineering workplace and you will find an extraordinary number of hand-held calculators in daily use, but too few users employ the programming power of their calculators. By programming them according to the instructions this text provides, they can make their tiny devices respond to the specific problems in which they are interested: solving complex equations, replicating experiments, modeling real world applications and creating exquisite graphs. The power of the calculator increases significantly. Programming was a central part of the school mathematics curriculum in the past. Today it is rarely taught except in specialized computer science courses. In Germany and Japan the situation is different: calculator programming is widely taught and applied. Rising says he hopes *Program Your Calculator* will address our nation's deficiency: Our book is a brief, straightforward presentation that can be used in school or college classrooms or by individual learners. A simple example of a program Rising wrote called Lottery models the national MegaMillions lottery. It allows users to buy as many dollar tickets as they wish and see the probable outcome. Running this program, he says, shows in striking fashion what little return players receive from their 'investments.' And Rising has written the popular *Inside Your Calculator*, published by John Wiley and Sons, which explains the math behind the calculator functions.

ABOUT THE AUTHORS: Gerald R. Rising is State University of New York (SUNY) Distinguished Teaching Professor Emeritus, University at Buffalo has been author or co-author of over a dozen textbooks and 100 journal articles. A more recent book is *Inside Your Calculator: From Simple Programs to Significant Insights* (Wiley, 2007). Professor Rising has taught at the University of Minnesota, New York University, University of Connecticut, Cornell University, and Manchester University in England. He served on the Joint American Statistical Association and the National Council of Teachers of Mathematics Committee on the Curriculum in Statistics and Probability, and served as liaison officer between the Mathematical Association of America and the National Council of Teachers of Mathematics. Eileen K. Schoaff is Professor of Mathematics Emeritus, Buffalo State College. She earned a SUNY Chancellor's Award for Excellence in Teaching. Schoaff has written two books and a number of articles. Deborah Moore-Russo is Assistant Professor of Mathematics Education at the University at Buffalo. She taught mathematics for five years at St. Gregory's College in

Oklahoma and for eight years at the University of Puerto Rico at Mayagüez. She has been author or co-author of two mathematics textbooks and 50 articles education.
