Research in Collegiate Mathematics Education VII Fernando Hitt, Derek Allan Holton, Patrick W. Thompson, 2010-03-05 The present volume of Research in Collegiate Mathematics Education, like previous volumes in this series, reflects the importance of research in mathematics education at the collegiate level. The editors in this series encourage communication between mathematicians and mathematics educators, and as pointed out by the International Commission of Mathematics Instruction (ICMI), much more work is needed in concert with these two groups. Indeed, editors of RCME are aware of this need and the articles published in this series are in line with that goal. Nine papers constitute this volume. The first two examine problems students experience when converting a representation from one particular system of representations to another. The next three papers investigate students learning about proofs. In the next two papers, the focus is instructor knowledge for teaching calculus. The final

two papers in the volume address the nature of ``conception" in mathematics. Whether they are specialists in education or mathematicians interested in finding out about the field, readers will obtain new insights about teaching and learning and will take away ideas that they can use.

Church and Society in Late Antique Italy and Beyond Claire Sotinel,2023-05-31 The papers presented here explore in various ways the interactions between clerics and the society in which Christian churches put down roots in Late Antiquity. Some of these complex processes, involved in the christianization of the Late Roman world, form the theme of the first three sections. Amongst other aspects, the essays in these sections examine the Three Chapters controversy and the participation of lay and clerical protagonists in it, the social standing of Italian bishops (including their use of lay personnel and their economic impact), and a comparison of pagan and Christian places of worship. The essays included in the last section deal with communication in Late Antiquity. They present the first results of a long-term project on the changing role of information during the last centuries of the Roman world. Eight papers in the volume are published in English for the first time.
