Calculator Mathematics for the Real Estate Professional Lawrence R. Rosen, 1978 Calculator Mathematics for the Real Estate Professional has two objectives: 1) to show you how to correctly answer the mathematics questions on a real estate licensing examination for salespersons or brokers; 2) to be a time-saving reference for real estate professionals, investors, tenants, accountants, lenders, and attorneys. Even those who are capable of performing complex mathematical computations will welcome the practicality of having the formulas and methods contained in one easy-to-use reference and will benefit from the short-cut, time-saving techniques described, including—how to determine in seconds (without handbooks or tables) the monthly payment on a mortgage loan, the outstanding loan balance at any particular point in time, or the interest portion of mortgage payments for a given year. The first ten chapters explain the various computations one will encounter in licensing examinations and everyday practice. The last three chapters describe how to use a pocket calculator to quickly solve these computations, and provide the method of solving more complex and advanced problems such as: computation of the area of unusually shaped land areas and the various calculations related to 'balloon mortgages. Examples are given for an algebraic language calculator and a reverse Polish calculator as well as for a basic four function model. Real estate practitioners who master the time-saving skills explained will increase their productivity, listings, commissions, and professionalism.
