Calex Hector R. Briceno,2016-12-04 Four great friends die nearly the same time by different circumstances, and they meet again on the way to heaven, but they have trouble getting in because everyone had to pass a little test in regard to their behavior on earth. According to the result, San Pedro allowed them to pass or not and rest up in heaven in the presence of the Lord accompanied by heavenly angels; however, they can't all achieve eternal rest for their souls. The text contains different scenes in the course of the attempt to obtain the pass, all this turns the reading this book into an unforgettable experience.

Multi-Modality Atherosclerosis Imaging and Diagnosis Luca Saba,João Miguel Sanches,Luís Mendes Pedro,Jasjit S. Suri,2013-09-13 Stroke is one of the leading causes of death in the world, resulting mostly from the sudden ruptures of atherosclerosis carotid plaques. Understanding why and how plaque develops and ruptures requires a multi-disciplinary approach such as radiology, biomedical engineering, medical physics, software engineering, hardware engineering, pathological and histological imaging. Multi-Modality Atherosclerosis Imaging, Diagnosis and Treatment presents a new dimension of understanding Atherosclerosis in 2D and 3D. This book presents work on plaque stress analysis in order to provide a general framework of computational modeling with atherosclerosis plaques. New algorithms based on 3D and 4D Ultrasound are presented to assess the atherosclerotic disease as well as very recent advances in plaque multimodality image fusion analysis. The goal of Multi-Modality Atherosclerosis Imaging, Diagnosis and Treatment is to fuse information obtained from different 3D medical image modalities, such as 3D US, CT and MRI, providing the medical doctor with some sort of augmented reality information about the atherosclerotic plaque in order to improve the accuracy of the diagnosis. Analysis of the plaque dynamics along the cardiac cycle is also a valuable indicator for plaque instability assessment and therefore for risk stratification. 4D Ultrasound, a sequence of 3D reconstructions of the region of interest along the time, can be used for this dynamic analysis. Multimodality Image Fusion is a very appealing approach because it puts together the best characteristics of each modality, such as, the high temporal resolution of US and the high spatial resolutions of MRI and CT.

Quantitative Ultrasound and Photoacoustic Imaging for the Assessment of Vascular Parameters Kristen M. Meiburger,2016-11-21 This book describes the development of quantitative techniques for ultrasound and

photoacoustic imaging in the assessment of architectural and vascular parameters. It presents morphological vascular research based on the development of quantitative imaging techniques for the use of clinical B-mode ultrasound images, and preclinical architectural vascular investigations on quantitative imaging techniques for ultrasounds and photoacoustics. The book is divided into two main parts, the first of which focuses on the development and validation of quantitative techniques for the assessment of vascular morphological parameters that can be extracted from B-mode ultrasound longitudinal images of the common carotid artery. In turn, the second part highlights quantitative imaging techniques for assessing the architectural parameters of vasculature that can be extracted from 3D volumes, using both contrast-enhanced ultrasound (CEUS) imaging and photoacoustic imaging without the addition of any contrast agent. Sharing and summarizing the outcomes of this important research, the book will be of interest to a broad range of researchers and practitioners in the fields of medical imaging and biomedical engineering.

Narratives of Disparity Eike Brock,Ana Honnacker,2018-04 Islam and the West are often identified as two distinct civilizations with conflicting characteristics. Assuming that a clash between Islam and the West is not inevitable, this study demonstrates that the divide is fabricated on both sides by Narratives of Disparity (NoDs) which are often built on historical narratives. The interplay of history and fiction in NoDs is exhibited on four novels published in Britain after 9/11, covering the most frequently used tropes: the postcolonial experience, counterterrorism, eurocentrism, traditionalism, honour killings and sexual autonomy.
