Learning through Others Emiliano Loria, 2020-05-29 The theory of natural pedagogy provides a model of social learning based on the direct communicative ostensive relation and aimed to the transfer of generic cultural knowledge. The pedagogical transmission of information originates from an explicit manifestation of teaching made by knowledgeable adults, who are naturally inclined to manifestly provide their cultural baggage to naïve conspecifics. The domain of transferable knowledge encompasses artifact functions, novel means actions, first words, gestural symbols, social practices, and rituals. This teaching process can be fast and efficient in virtue of a natural inclination possessed by infants to seek information and decode signals of ostensive communication. In this sense, the natural pedagogy represents, as the two proponents – György Gergey and Gergely Csibra – claim, «a communicative system of mutual design specialized for the fast and efficient transfer of new and relevant cultural knowledge from knowledgeable to ignorant conspecifics». This book suggests that natural pedagogy utilises early belief attribution competences, which are employed by infants in a variety of contexts to approach and navigate the social world. Therefore, the natural pedagogy, in cooperation with the early mindreading system, may represent one of the most efficient adaptive strategies to firmly create that deep wittgensteinian «nest of propositions» which build cultural shared beliefs structures to be relied upon and followed.

Natural Rivals John Clayton, 2019-08-06 John Muir and Gifford Pinchot have often been seen as the embodiment of conflicting environmental philosophies. Muir, the preservationist and co-founder of the Sierra Club. Pinchot, the first chief of the U.S. Forest Service advocating sustainability in timber harvests, instituted conservation. The idealistic Muir saw nature as something special and separate; the pragmatic Pinchot accepted that people used the products of nature. The environmental movement's original sin, and the root of many of its difficulties, was its

inability to reconcile these two viewpoints—and these two men. So how was it that Muir and Pinchot went camping together—and delighted in each other's company? Does this mean that the seemingly irreparable divide in environmental ethos is not as unbridgeable as it might seem? The perceived rivalry between these two men has obscured a fascinating and hopeful story. Muir and Pinchot actually spent years in an alliance that led to the original movement for public lands. Their shared commitment to the glories of natural landscapes united their disparate talents and viewpoints to create a fledgling and uniquely American vision of land ownership and management.

Nature Puzzlers Lawrence E. Hillman, 1989-11-15 Offers teachers a series of brief nature puzzles to introduce the inquiry method to students. Little or no technical science background is required for students to answer these puzzle questions, which cover a variety of scientific concepts. Encourages the use of cognitive skills in problem solving: questioning, defining, fact-finding, comparing and contrasting, hypothesizing, deduction, and induction. The puzzles are presented in an engaging way, and at three levels of difficulty. Sample titles are: Misguided Salmon (why aren't salmon finding their old spawning sites?); The Bird with ESP (how does a bird know about some things before they happen?); and Scalpel, Suture, Leech (how are leeches used in modern operating rooms?). Each puzzle includes a teacher's key, background information to aid teachers in guiding inquiry, solution, alternate hypotheses, and suggested reading and additional activities. Most appropriate for middle school and older students.
