Audio-visual Person Tracking: A Practical Approach Fotios Talantzis,Aristodemos Pnevmatikakis,Anthony G

Constantinides,2011-12-23 This book deals with the creation of the algorithmic backbone that enables a computer to perceive humans in a monitored space. This is performed using the same signals that humans process, i.e., audio and video. Computers reproduce the same type of perception using sensors and algorithms in order to detect and track multiple interacting humans, by way of multiple cues, like bodies, faces or speech. This application domain is challenging, because audio and visual signals are cluttered by both background and foreground objects. First, particle filtering is established as the framework for tracking. Then, audio, visual and also audio-visual tracking systems are separately explained. Each modality is analyzed, starting with sensor configuration, detection for tracker initialization and the trackers themselves. Techniques to fuse the modalities are then considered. Instead of offering a monolithic approach to the tracking problem, this book also focuses on implementation by providing MATLAB code for every presented component. This way, the reader can connect every concept with corresponding code. Finally, the applications of the various tracking systems in different domains are studied./a

Extracellular Matrix Degradation William C. Parks,Robert Mecham,2011-04-07 Regulated turnover of extracellular matrix (ECM) is an important component of tissue homeostasis. In recent years, the enzymes that participate in, and control ECM turnover have been the focus of research that touches on development, tissue remodeling, inflammation and disease. This volume in the Biology of Extracellular Matrix series provides a review of the known classes of proteases that degrade ECM both outside and inside the cell. The specific EMC proteases that are discussed include cathepsins, bacterial collagenases, matrix metalloproteinases, meprins, serine proteases, and elastases. The volume also discusses the domains responsible for specific biochemical characteristics of the proteases and the physical interactions that occur when the protease interacts with substrate. The topics covered in this volume provide an important context for understanding the role that matrix-degrading proteases play in normal tissue remodeling and in diseases such as cancer and lung disease.

Easy Object Programming for the Macintosh Using AppMaker and THINK C Richard O. Parker,1993 This exploration of object-oriented programming in C, shows how a complex application can be easily created, in a step-by-step manner, using state-of-the-art Macintosh tools. As well as describing the evolution of a complete, multipurpose application starting from a skeleton application automatically generated by AppMaker, this book also uses two mainstream development tools to create applications - AppMaker version 1.5 and THINK C version 5.0.

Did I Say You Could Go Melanie Gideon,2021-08-03 A suspenseful novel about friendships steeped in obsessions, lies and duplicity, with shocking twists that hurtle towards a devastating conclusion.--

Easy Object Programming for the Macintosh Using AppMaker and THINK Pascal Richard O. Parker,1993 Much of the drudgery of programming on the Macintosh is eliminated through the use of the THINK Class Library together with a tightly coupled program generator.
