*Radical Technologies* Adam Greenfield, 2017-06-13 A field manual to the technologies that are transforming our lives. Everywhere we turn, a startling new device promises to transfigure our lives. But at what cost? In this urgent and revelatory excavation of our Information Age, leading technology thinker Adam Greenfield forces us to reconsider our relationship with the networked objects, services and spaces that define us. It is time to re-evaluate the Silicon Valley consensus determining the future. We already depend on the smartphone to navigate every aspect of our existence. We're told that innovations—from augmented-reality interfaces and virtual assistants to autonomous delivery drones and self-driving cars—will make life easier, more convenient and more productive. 3D printing promises unprecedented control over the form and distribution of matter, while the blockchain stands to revolutionize everything from the recording and exchange of value to the way we organize the

mundane realities of the day to day. And, all the while, fiendishly complex algorithms are operating quietly in the background, reshaping the economy, transforming the fundamental terms of our politics and even redefining what it means to be human. Having successfully colonized everyday life, these radical technologies are now conditioning the choices available to us in the years to come. How do they work? What challenges do they present to us, as individuals and societies? Who benefits from their adoption? In answering these questions, Greenfield's timely guide clarifies the scale and nature of the crisis we now confront —and offers ways to reclaim our stake in the future.

Vargic's Miscellany of Curious Maps Martin Vargic,2015-12-01

A remarkable, fascinating and beautiful visual guide to the world as you have never seen it. Vargic's Miscellany of Curious Maps is a wonderfully weird collection of meticulous and striking cartographic creations, such as the infamous Map of Stereotypes. Based on a Westerner's stereotypical view of the world, Slovakian artist and cartophile Martin Vargic assigns more than two thousand labels and prejudices to cities, states, countries, continents, oceans and seas on a large-scale, visually stunning world map, which alone took more than four months to create. The conceptual Map of the Internet and the Map of Sports are exquisite and surprising, and infographic maps showing the number of heavy-metal bands per capita, the probability of getting struck by lightning, average penis length, and the number of tractors per 1,000 inhabitants make it hard not to share with the person next to you. Including more than 70 maps, four foldout maps and two oversized removable posters, this book is a treasure trove of unexpected facts of our quirky, glorious and diverse big beautiful world.

**Man Facing West** Don Gayton,2010 Man Facing West presents a collection of fiction and nonfiction, sewn together with

traces of autobiography. This collection is part of Don Gayton's ongoing life journal, recounting moments of his boyhood in the United States and the Peace Corps, and detailing his opinions regarding the draft and the Vietnam War. Guiding these accounts are the forces of science and geology that have shaped Gayton's career in Canada. As his stories of scheming university students, prodding 19th century scientists, and geologists time-tunneling into the prehistoric past of the prairies appear, we are always aware of Gayton's ability to transform science into magic.

*«Remov'd from human eyes»: Madness and Poetry 1676-1774*

Natali, Ilaria, 2016-08-30 The years 1676 and 1774 marked two turning points in the social and legal treatment of madness in England. In 1676, London's Bethlehem Hospital expanded in grand new premises, and in 1774 the Madhouses Act attempted to limit confinement of the insane. This study explores almost a century of the English history of madness through the texts of five poets who were considered mentally troubled according to contemporary standards: James Carkeesse, Anne Finch, William Collins, Christopher Smart and William Cowper were hospitalized, sequestered or exiled from society. Their works cope with representations of insanity, medical definitions or practices, imputed illness, and the judging eye of the 'sane other', shedding new light on the dis/continuities in the notion of madness of this period.

*Bike Lanes Are White Lanes* Melody L Hoffmann, 2016-07-01

The number of bicyclists is increasing in the United States, especially among the working class and people of color. In contrast to the demographics of bicyclists in the United States, advocacy for bicycling has focused mainly on the interests of white upwardly mobile bicyclists, leading to neighborhood conflicts and accusations of racist planning. In *Bike Lanes Are White Lanes*, scholar Melody L. Hoffmann argues that the bicycle has varied

cultural meaning as a “rolling signifier.” That is, the bicycle’s meaning changes in different spaces, with different people, and in different cultures. The rolling signification of the bicycle contributes to building community, influences gentrifying urban planning, and upholds systemic race and class barriers. In this study of three prominent U.S. cities—Milwaukee, Portland, and Minneapolis—Hoffmann examines how the burgeoning popularity of urban bicycling is trailed by systemic issues of racism, classism, and displacement. From a pro-cycling perspective, *Bike Lanes Are White Lanes* highlights many problematic aspects of urban bicycling culture and its advocacy as well as positive examples of people trying earnestly to bring their community together through bicycling.

*Abstract State Machines, Alloy, B and Z* Marc Frappier, Uwe Glässer, Sarfraz Khurshid, Régine Laleau, Steve Reeves, 2010-02-20  
This book constitutes the proceedings of the Second International Conference on Abstract State Machines, B and Z, which took place in Orford, QC, Canada, in February 2010. The 26 full papers presented were carefully reviewed and selected from 60 submissions. The book also contains two invited talks and

abstracts of 18 short papers which address work in progress, industrial experience reports and tool descriptions. The papers cover recent advances in four equally rigorous methods for software and hardware development: abstract state machines (ASM), Alloy, B and Z. They share a common conceptual framework, centered around the notions of state and operation, and promote mathematical precision in the modeling, verification and construction of highly dependable systems.

The ESRI Guide to GIS Analysis, Volume 2 ,2005 As the tools available through commercial GIS software have grown in sophistication, a need has emerged to instruct users on the best practices of true GIS analysis. In this sequel to the bestselling The ESRI Guide to GIS Analysis, Volume 1, author Andy Mitchell delves into the more advanced realm of spatial measurements and statistics. The premise of The ESRI Guide to GIS Analysis, Volume 2, targets GIS technology as having been well used as a display and visualization medium but not so widely used as an implement for real analysis. Covering topics that range from identifying patterns and clusters, to analyzing geographic relationships, this book is a valuable resource for GIS users performing complex analysis.
