Manual of Cardio-oncology Chiara Lestuzzi,Stefano Oliva,Francesco Ferraù,2017-10-13 This concise and handy manual provides straightforward, up-to-date guidance for cardiologists and other practitioners on the management of cancer patients with cardiac problems, whether they be due to the cancer itself or to antineoplastic treatment. Detailed attention is devoted to the various forms of cardiotoxicity associated with chemotherapy and radiotherapy. The drugs commonly responsible for each toxicity are identified and clear advice is offered on monitoring techniques and treatment approaches. In addition, the issue of cardiotoxicity due to cancer treatment in particular patient groups - children, the elderly, and those with pre-existing cardiac disease - is addressed separately, with guidance on when and how antineoplastic (and/or cardiological) treatments should be modified. Further sections describe the correct responses to cardiac problems secondary to the cancer itself, including thromboembolic disorders and electrolyte imbalances, and the diagnosis, treatment, and follow-up of cardiac tumors. A closing section considers how to improve cooperation between oncologists, cardiologists, and general practitioners to ensure that cancer patients' cardiovascular needs are met in a multidisciplinary approach.

Cardio-Oncology Roberta A. Gottlieb,Puja K Mehta,2016-11-26 Cardio-Oncology: Principles, Prevention and Management is a clinical volume that focuses on the basic science of cardio-oncology, addresses cardiotoxicity as a consequence of cancer therapy, and discusses prevention, diagnosis and management of cardiovascular disease in patients with cancer. This comprehensive volume presents unique perspectives ranging from basic science to clinical medicine in the field of cardio-oncology. It would be a valuable resource for cardiologists, oncologists, internists, and pediatricians caring for patients with cancer who have cardiovascular risk factors, as well as for cardio-oncology researchers. Covers basic science of cardio-oncology to provide readers with the necessary background Addresses cardiotoxicity related to current cancer therapeutic modalities Discusses diagnostic and management approaches of patients with underlying cardiac risk factors as well as otherwise healthy cancer patients

Multi-slice CT in Cardiac Imaging Bernd M. Ohnesorge,2002 Cardiac diseases and in particular coronary artery disease are the leading cause of death and morbidity in the industrialized countries. The development of reliable cardiac imaging techniques is considered a key issue in improving patient care. The introduction of multi-slice computed tomography in 1998 represented a breakthrough of CT technology in cardiac imaging. For the first time, widely available CT systems can be used for non-invasive, angiographic assessment of the heart and the coronary arteries. This book presents and discusses the technical concepts, the potential spectrum of applications and the future perspectives of multi-slice CT in cardiac imaging based on the experience of internationally leading clinical institutions. It shows that this new modality has the potential to become an important and robust tool for non-invasive and early diagnosis of cardiac diseases, thus complementing invasive and non-invasive imaging modalities in clinical routine in the near future.

Cardio-Hepatology Tatsunori Taniguchi,Samuel S. Lee,2022-09-20 Cardio-Hepatology: Connections Between Hepatic and Cardiovascular Disease provides a direct relationship between the cardiac and hepatic pathologies providing the link between the heart and liver and showing how liver diseases predispose to impairment in heart functioning and vice versa. Considering the growing number of patients living (and living longer) with heart failure and/or congenital heart disease, it is important to know when and how to test for liver disease in this population, how to interpret abnormal test results, and what management is appropriate. Coverage includes what should be done for patients to limit, avoid, or postpone the impairment in the liver functioning induced by heart diseases and the impairment in the heart functioning induced by liver diseases, on the basis of scientific-exposed evidence and pathophysiology knowledge. This comprehensive, extended review of the medical literature is perfect for researchers interested in the connection between cardiology and hepatology as well as clinicians making therapeutic decisions for patients suffering from heart or liver chronic diseases. Reviews and discusses all current knowledge about the interactions between heart and liver pathologies Provides guidance on current topics surrounding the assessment of the liver in heart failure Presents important clinical cardiovascular assessments in cirrhotic patients

Cardio-Renal Clinical Challenges David Goldsmith,Adrian Covic,Jonas Spaak,2014-11-12 In modern medicine, the aging population is prone to many simultaneous cardiovascular (CV) risk factors which often produce co-incident pathology. Nowhere is this more obvious than in the interaction between Chronic Kidney Disease (CKD), Diabetes and diverse CV diseases (CVD). This is a complex and challenging area, as the presence of CKD/diabetes promotes CVD while also complicating its treatment. The emergence of CKD as a public health priority is one of the most challenging problems of modern medicine. It is now solidly established that renal dysfunction portends a high risk for cardiovascular disease. Cardiovascular diseases remains the main cause of death in western societies and the amplification of the death risk conveyed by coexisting CKD, even though still poorly understood, appears considerable. The bidirectional link that associates renal and cardiovascular diseases, the high risk of the death signalled by their coexistence and the considerable epidemiological burden imposed by this link is at the basis of the emergence of a new discipline aiming at making the borders between nephrology and cardiovascular medicine even more permeable than before. The term Cardio-Renal Syndrome was coined around 5 years ago to try to formalize this link, and act as a stimulus to interaction between clinical teams, researchers and others to achieve better management and outcomes for all. This book takes clinical presentations and clinical problems as its base, and then discuss the evidence for best management of common clinical problems as well as the reasons for the complex interplay between the cardiac and renal systems. Moreover, it addresses the issue of organizing healthcare to maximize the opportunities for prevention and best healthcare economic returns, building on cutting edge initiatives at the Karolinska, Stockholm. The book will be of immediate value and interest to all cardiologists and renal physicians.

Cardiovascular Toxicities of Breast Cancer Treatment: Emerging Issues in Cardio-Oncology Sharad Goyal,Bruce George Haffty,2016-05-20 Cancer and cardiovascular disease (CVD) are the two most common causes of mortality and morbidity worldwide. The incidence of both cancer and cardiovascular disease increases with age. With increased life expectancy, the burden of both these diseases will increase substantially in coming years. Patients with CVD share multiple common risk factors and lifestyle behaviors in addition to frequently suffering from multiple comorbid conditions. Tobacco use, hypertension, high cholesterol, diabetes, physical inactivity, and poor nutrition are all established risk factors of heart disease. Patients with diseases such as breast cancer may develop CVD from treatment, such as use of chemotherapy and RT. Effects on the heart are a potentially significant and serious clinical problem in radiation therapy treatment of breast cancer. Over the course of the past 50 years, there have been great advances in the delivery of RT due to the development of new techniques, beam energy, improvement in imaging modalities, and development of image registration strategies. It is hypothesized that

cardiac damage from RT is correlated to the dose absorbed by the heart and differs between left- and right-breast radiotherapy. The damage to cardiac micro- and macro-vasculature is the pathophysiological cause of RT-related heart disease. Given the growing clinical relevance of cardio-oncology, this Frontiers in Oncology Research Topic provides a venue for disseminating focused reviews and cutting edge research in this quickly growing field. We encourage submission of original papers and reviews dealing with cardiac toxicity after breast cancer treatment, motion management to reduce cardiac exposure, imaging to evaluate potential cardiac toxicities and primary prevention of cardiac disease in the breast cancer patient.

This book, written by respected cardiologist José Marín-García, features discussion on the Hap-Map: the largest international effort to date aiming to define the differences between our individual genomes. This unique reference further reviews and investigates genome sequences from our evolutionary relatives that could help us decipher the signals of genes, and offers a comprehensive and critical evaluation of regulatory elements from the complicated network of the background DNA. Offers updated discussion of cutting-edge molecular techniques including new genomic sequencing / NGS / Hap-Map / bioinformatics / systems biology approaches Analyzes mitochondria dynamics and their role in cardiac dysfunction, up-to-date analysis of cardio-protection, and cardio-metabolic syndrome Presents recent translational studies, gene therapy, transplantation of stem cells, and pharmacological treatments in CVDs
