*Figure and Force in Animation Aesthetics* Ryan Pierson, 2019 How can we describe movements in animated films? In *Figure and Force in Animation Aesthetics*, Ryan Pierson introduces a powerful new method for the study of animation. By looking for figures--arrangements that seem to intuitively hold together--and forces--underlying units of attraction, repulsion, and direction--Pierson reveals startling new possibilities for animation criticism, history, and theory. Drawing on concepts from Gestalt psychology, Pierson offers a wide-ranging comparative study of four animation techniques--soft-edged forms, walk cycles, camera movement, and rotoscoping--as they appear in commercial, artisanal, and avant-garde works. In the process, through close readings of little-analyzed films, Pierson demonstrates that figures and forces make fertile resources for theoretical speculation, unearthing affinities between animation practice and such topics as the philosophy of mathematics, scientific and political revolution, and love. Beginning and ending with the imperative to look closely, *Figure and Force in Animation Aesthetics* is a performance in seeing the world of motion anew. Keywords: animation, film theory, Gestalt psychology, phenomenology, film-philosophy, modernism--

**Basic Animation Stand Techniques** Brian G. D. Salt, 2014-05-18 Basic Animation Stand Techniques describes the use and importance of the animation stand in making animated films for the screen. The book describes the fundamental operation and construction of the animation stand where the film camera is mounted. The text explains in detail how the animation stand holds the camera, which points vertically straight down on the table containing the artwork. The selection describes the zoom movement, the light box, and the cell punch. Then the book discusses the three kinds of methods of animation, namely, modification, substitution, and mechanical movement. The book teaches some basic techniques of animation as well as the use of superimposition, image replacement, back projection, aerial image, fades, or mixes. The text explains exposures at different sized fields and camera exposure sheets, the latter containing detailed instructions on how to shoot each single frame. The book also notes the settings that can be achieved on a modern animation stand, including the counters and calibration of gears and wheels. For example, a movement can be as precise as a hundredth of an inch, while a rotation can be made in a tenth of a degree. The book also provides a fairing table, different exposures for different films, and a method to approximate the amount of film stock left in a magazine. The text is valuable for artists, animators, animation technicians, film directors, and others working in the film industry.

Visit [www.luminosoa.org](http://www.luminosoa.org) to learn more. In this beautifully written and deeply researched study,

Hannah Frank provides an original way to understand American animated cartoons from the Golden Age of animation (1920-1960). In the pre-digital age of the twentieth century, the making of cartoons was mechanized and standardized: thousands of drawings were inked and painted onto individual transparent celluloid sheets (called “cels”) and then photographed in succession, a labor-intensive process that was divided across scores of artists and technicians. In order to see the art, labor, and technology of cel animation, Frank slows cartoons down to look frame by frame, finding hitherto unseen aspects of the animated image. What emerges is both a methodology and a highly original account of an art formed on the assembly line.
