Textile Finishing K. L. Mittal, Thomas Bahners, 2017-08-24 Textiles have been historically and traditionally used to make clothes, but even in ancient times there were technical textiles for making sails, tents, etc. Today, technical textiles are used in various industries for a host of purposes and applications. Recently, there have been exciting developments on various fronts in the textile field to impart novel and innovative functionalities to textiles, e.g., easy-to-clean or dirt-repellent, flame retardancy, anti-bacterial, and fog-harvesting properties, to name a few. Also, textiles for electronics based on graphene, CNTs and other nanomaterials, conductive textiles, textiles for sensor function, textile-fixed catalysts, textiles for batteries and energy storage, textiles as substrates for tissue engineering, and textiles for O/W separation have appeared in the literature. All this has been possible through adopting novel ways for finishing textiles, e.g., by appropriate surface modification techniques, and utilizing biomimetic concepts borrowed from nature. This unique book entitled "Textile Finishing: Recent Developments and Future Trends" is divided into four parts: Part 1: Recent Developments/Current Challenges in Textile Finishing; Part 2: Surface Modification Techniques for Textiles; Part 3: Innovative Functionalities of Textiles; Part 4: Fiber-Reinforced Composites. The topics covered include: Antimicrobial textile finishes; flame retardant textile finishing; "self-cleaning" or easy-to-clean textiles; metallization of textiles; atmospheric pressure plasma, and uv-based photochemical surface modification of textiles; tunable wettability of textiles; 3D textile structures for fog harvesting; textile-fixed catalysts; medical textiles as substrates for tissue engineering; and fiber-reinforced "green" or "greener" biocomposites and the relevance of fiber/matrix adhesion.

Analysis of Flame Retardancy in Polymer Science Henri Vahabi, Mohammad Reza Saeb, Giulio Malucelli, 2022-03-10 Analysis of Flame Retardancy in Polymer Science is a scientific/practical book that is conceptualized, designed, and written for students, early-career researchers, and junior engineers to explain the basic principles of fire analysis/characterization methods/methodologies, from flammability, ignition, and fire spread to forced convection and related analyses and to elucidate the mechanisms underlying flame retardancy in both gas and condensed phases followed by correlation between laboratory- and real-scale fire analyses as well as fire analysis from an industrial standpoint. This book is also an indispensable resource for identifying and mounting the latest achievements in fire analysis/characterization methods to frame the effects of fire evaluation strategies to be utilized for research and development. The book also gives a broad description of fire analysis related to different standards and regulations for different applications in different geographic zones. Includes the background, fundamental, and modern features of techniques of characterization of fire and flame behavior Provides an overview of the major techniques used in fire analysis of flame-retardant polymers Characterizes different types of materials at small, bench, and real-life scale Offers a comprehensive overview of fire behavior and testing and associated toxicity issues Integrates the scientific, technical, standard, regulation, and industrial aspects of fire analysis into a book for future developments in the field

Technological Eco-Innovations for the Quality Control and the Decontamination of Polluted Waters and Soils Massimo Zacchini, Paras Ranjan Pujari, 2020-03-12 The Special Issue "Technological Eco-Innovations for the Quality Control and the Decontamination of Polluted Waters and Soils" deals with the most recent research activities carried out at lab and field scale on eco-sustainable tools for the remediation of contaminated environmental substrates. It is particularly devoted to highlight the relevance of biological organisms (plants, microbes, algae) to assess the chemical contamination in water and soil and to remediate such matrices from the pollution

caused by the human activities. Therefore, bioremediation is a primary focus of most of the articles published within the present Special Issue. Bioremediation is a promising environmentally friendly technology to deal with the chemical pollution in different ecosystem compartments and its integration with the traditional approaches might represent a significant breakthrough for the environmental decontamination. An overview of the potential of the eco-innovative technologies, with nature-based solutions associated with the modern analytical techniques, is offered along the contributions forming the Special Issue. In this volume, different contaminants occurring in various environmental matrices are focused, both in controlled conditions and on site, with many interesting outcomes useful from research perspectives.

Treading Grapes Rosemary George, 2011-11-30 Tuscany offers some of the most spectacular scenery in Europe. The unique combination of cypress trees and olive groves mingling with vineyards and woods on undulating hillsides is enchanting. With villages and villas at every turn, what better way to explore the countryside than on foot? Over fifteen months of changing seasons Rosemary George did just that, visiting wine producers along the way, observing and savouring the local colour and the idiosyncrasies of a myriad of winemakers. Each chapter will feature a walk through a wine region and include advice on the key estates, places to visit and favourite restaurants. Chianti, which covers the heart of Tuscany, is the wine we all know and love, with vineyards in the magical hills around Florence and Siena, and the medieval cities of Arezzo and Pisa. However, the face of Tuscan viticulture has changed enormously in recent years with the development of the vineyards of the Maremma, bringing a host of new wines. *Treading Grapes* charts this wonderful renaissance of Tuscan wines, not just of Chianti, but also of the newer prestigious names such as Sassicaia and Ornellaia in the rising area of Bolgheri. It also covers the old-established wines of Brunello di Montalcino and Vino Nobile di Montepulciano, and several others, not least the island of Elba. It will be enjoyed by wine enthusiasts and armchair travellers alike.

Towards Bio-based Flame Retardant Polymers Rodolphe Sonnier, Aurélie Taguet, Laurent Ferry, José-Marie Lopez-Cuesta, 2017-10-06 Sustainable development has become a great concern in modern society. The authors of this brief describe how one strategy to reach this objective is to replace oil-based materials with bio-based materials. They emphasize the great efforts that have been made to synthesize new bio-based polymers or additives or to replace glass fibers by natural fibers in composites. Flame retardancy is one of the most desired properties for many applications in wires and cables, building, transport, electric and electronic devices. The authors of this fascinating and timely brief summarize this important field in three parts. The flame retardancy of biobased polymers, the flame retardancy of natural fibers composites, and the synthesis and efficiency of biobased flame retardants.
