The Law Reports of the Special Court for Sierra Leone (2 vols.) Charles Chernor Jalloh, Simon Meisenberg, 2014-03-17 This volume, which consists of two books and a CD-ROM and is edited by two legal experts on the Sierra Leone court, presents, for the first time in a single place, a comprehensive collection of all the interlocutory decisions and final trial and appeals judgments issued by the court in the case Prosecutor v. Norman, Fofana and Kondewa (The CDF Case). It contains the full text of all substantive judicial decisions, including the majority, separate and concurring as well as dissenting opinions. It additionally provides relevant information for a better understanding of the case, such as the indictments, a list of admitted exhibits and a list of documents on the case file.

Particle Detection with Drift Chambers Walter Blum, Luigi Rolandi, 2013-03-09 This study edition of Blum and Rolandi's successful book addresses those students who want to begin to understand particle detection and drift chambers, by providing a solid foundation for judging the achievable accuracy for coordinate and ionization measurements. It covers topics such as gas ionization by particles and by laser rays; the drift of electrons and ions in gases; electrostatics of wire grids and field cages; amplification of ionization; creation of the signal track parameters and their errors; ion gates; particle identification by measurement of ionization; existing chambers; drift chamber gas. The topics are treated in a text-book style with many figures, together with explicitly performed calculations.

Heavy Flavour Physics Theory and Experimental Results in Heavy Quark Physics C.T.H Davies, S.M Playfer, 2019-03-29 This book provides a thorough introduction to the phenomenology of heavy flavour physics, those working on the B-factories, LHCb, BTeV, HERA and the Tevatron. It explains how heavy quark theory could be implemented on the lattice, and discusses the status of CP-violation in the neutral kaon system.

The Law Reports of the Special Court for Sierra Leone Charles Chernor Jalloh, Simon Meisenberg, 2021-09-27 This volume, which consists of three books and a CD-ROM and is edited by two legal experts on the Sierra Leone court, presents, for the first time in a single place, a comprehensive collection of all the interlocutory decisions and final trial and appeals judgments issued by the court in the case Prosecutor v. Sesay, Kallon and Gabo (The RUF Case)r.

The Evidence for the Top Quark Kent W. Staley, 2004-04-05 The Evidence for the Top Quark offers both a historical and philosophical perspective on an important recent discovery in particle physics: the first evidence for the elementary particle known as the top quark. Drawing on published reports, oral histories, and internal documents from the large collaboration that performed the experiment, Kent Staley explores in detail the controversies and politics that surrounded this major scientific result. At the same time the book seeks to defend an objective theory of scientific evidence based on error probabilities.

Anechoic and Reverberation Chambers Qian Xu, Yi Huang, 2019-01-04 A comprehensive review of the recent advances in anechoic chamber and reverberation chamber designs and measurements Anechoic and Reverberation Chambers is a guide to the latest systematic solutions for designing anechoic chambers that rely on state-of-the-art computational electromagnetic algorithms. This essential resource contains a theoretical and practical understanding for electromagnetic compatibility and antenna testing. The solutions outlined optimise chamber performance in the structure, absorber layout and antenna positions whilst minimising the overall cost. The anechoic chamber designs are verified by measurement results from Microwave Vision Group that validate the accuracy of the solution. Anechoic and Reverberation Chambers fills this gap in the literature by providing a comprehensive reference to electromagnetic measurements, applications and over-the-air tests inside chambers. The expert contributors offer a summary of the latest developments in anechoic and reverberation chambers to help scientists and engineers apply the most recent technologies in the field. In addition, the book contains a comparison between reverberation and anechoic chambers and identifies their strengths and weaknesses. This important resource: • Provides a systematic solution for anechoic chamber design by using state-of-the-art computational

electromagnetic algorithms • Examines both types of chamber in use: comparing and contrasting the advantages and disadvantages of each • Reviews typical over-the-air measurements and new applications in reverberation chambers • Offers a timely and complete reference written by authors working at the cutting edge of the technology • Contains helpful illustrations, photographs, practical examples and comparison between measurements and simulations Written for both academics and industrial engineers and designers, Anechoic and Reverberation Chambers explores the most recent advances in anechoic chamber and reverberation chamber designs and measurements.

Flavor Physics at the Tevatron Thomas Kuhr, 2012-09-30 The book reviews the latest experimental results of charm and bottom flavor physics at the Tevatron proton-antiproton collider. The measurements of lifetimes, branching ratios and mixing properties of heavy flavored hadrons provide important constraints on fundamental parameters of the standard model – the elements of the CKM matrix. Comparisons of experimental results with theoretical predictions allow to search for physics beyond the standard model or to set bounds on parameters of new physics models. The experimental techniques developed at the Tevatron are highly relevant for the next generation flavor physics experiments at the LHC. This book provides the reader a detailed summary of the status of heavy flavor physics at the end of the Tevatron data taking period and the start of the LHC program.

The Experimental Foundations of Particle Physics Robert N. Cahn, Gerson Goldhaber, 2009-07-23 Our current understanding of elementary particles and their interactions emerged from breakthrough experiments. This book presents these experiments, beginning with the discoveries of the neutron and positron, and following them through mesons, strange particles, antiparticles, and quarks and gluons. This second edition contains new chapters on the W and Z bosons, the top quark, B-meson mixing and CP violation, and neutrino oscillations. This book provides an insight into particle physics for researchers, advanced undergraduate and graduate students. Throughout the book, the fundamental equations required to understand the experiments are derived clearly and simply. Each chapter is accompanied by reprinted articles and a collection of problems with a broad range of difficulty.

Standard Model And Just Beyond, The - Proceedings Of The 4th San Miniato Topical Seminar Francesco Luigi Navarra, Pier Giovanni Pelfer, 1993-07-15 The 4th San Miniato Topical Seminar on "The Standard Model and Just Beyond" was a continuation of the meetings held in 1985, 1987 and 1991, and covered essentially similar topics. The program focused on reviews of the present experimental progress in precise electroweak and QCD tests, heavy flavour physics (particularly mixing) and the search for new particles. The emphasis was on the most recent results coming from the large statistics data samples collected at LEP, other e+e- machines, hadron colliders and fixed target experiments. The present status of the theory was reviewed and one session was dedicated to the discussion of future plans and physics issues.

The American Black Chamber Herbert O. Yardley, 2013-01-15 During the 1920s Herbert O. Yardley was chief of the first peacetime cryptanalytic organization in the United States, the ancestor of today's National Security Agency. Funded by the U.S. Army and the Department of State and working out of New York, his small and highly secret unit succeeded in breaking the diplomatic codes of several nations, including Japan. The decrypts played a critical role in U.S. diplomacy. Despite its extraordinary successes, the Black Chamber, as it came to be known, was disbanded in 1929. President Hoover's new Secretary of State Henry L. Stimson refused to continue its funding with the now-famous comment, Gentlemen do not read other people's mail. In 1931 a disappointed Yardley caused a sensation when he published this book and revealed to the world exactly what his agency had done with the secret and illegal cooperation of nearly the entire American cable industry. These revelations and Yardley's right to publish them set into motion a conflict that continues to this day: the right to freedom of expression versus national security. In addition to offering an exposé on post-World War I cryptology, the book is filled with exciting stories and personalities.

Physics in Collision 9 Jacob Grunhaus, 1990

Proceedings of the 31st International Conference on High Energy Physics ICHEP 2002

S. Bentvelsen, P. de Jong, J. Koch, E. Laenen, 2012-12-02 The first precision measurements on CP violation in the B system are reported. Both the BELLE and the BABAR collaboration presented, among others, results for $\sin 2\beta$ with much improved accuracy. Results from the Sudbury Neutrino Observatory, SNO, also deserve to be mentioned. The convincing evidence of solar neutrino oscillations had been presented by SNO prior to the conference; a full presentation was given at the conference. An incredibly precise measurement of the anomalous magnetic moment of the muon is reported, a fresh result from the Brookhaven National Laboratory. Apart from these distinct physics highlights, there are also the first results from the new Tevatron run and from the relativistic heavy ion collider RHIC. Theorists write of our ever better understanding of the Standard Model and of what might lie beyond. Risky as it is to highlight only a couple of exciting subjects, it is merely meant to whet the appetite for further reading.

Modern Warfare Benjamin Perrin, 2012-05-15 The face of modern warfare is changing as more and more humanitarian organizations, private military companies, and non-state armed groups enter complex security environments such as Iraq, Afghanistan, and Haiti. Although this shift has been overshadowed by legal issues connected to the War on Terror and intervention in countries such as Rwanda and Sudan, it has caused some to question the relevance of the laws of war. *Modern Warfare* explores the law's failure -- and potential -- to ensure compliance in the context of a changing military landscape; by doing so, it opens a path to preventing further unnecessary suffering and violence.

Narratives of Justice In and Out of the Courtroom Dubravka Zarkov, Marlies

Gladius, 2014-04-14 This volume considers the dynamic relations between the contemporary practices of international criminal tribunals and the ways in which competing histories, politics and discourses are re-imagined and re-constructed in the former Yugoslavia and beyond. There are two innovative aspects of the book - one is the focus on narratives of justice and their production, another is in its comparative perspective. While legal scholars have tended to analyze transitional justice and the international war tribunals in terms of their success or failure in establishing the facts of war crimes, this volume goes beyond mere facts and investigates how the courts create a symbolic space within which competing narratives of crimes, perpetrators and victims are produced, circulated and contested. It analyzes how international criminal law and the courts gather, and in turn produce, knowledge about societies in war, their histories and identities, and their relations to the wider world. Moreover, the volume situates narratives of transitional justice in former Yugoslavia both within specific national spaces - such as Serbia, and Bosnia - and beyond the Yugoslav. In this way it also considers experiences from other countries and other times (post-World War II) to offer a sounding board for re-thinking the meanings of transitional justice and institutions within former Yugoslavia. Included in the volume's coverage is a look at the Rwandan tribunals, the trials of Charles Taylor, Radovan Karadzic, the Srebrenica genocide, and other war crimes and criminals in the Yugoslav. Finally, it frames all of those narratives and experiences within the global dynamics of legal, social and geo-political transformations, making it an excellent resource for social science researchers, human rights activists, those interested in the former Yugoslavia and international relations, and legal scholars.

Particle Physics Brian Martin, 2011-03-01 Gaining notoriety as the science behind the controversial experiments of the Large Hadron Collider, particle physics explores our most fundamental and mind-blowing problems: How did the Universe start? What are we made of? How small is the smallest thing? Without presuming any prior scientific knowledge, Brian R. Martin takes readers on a wide-ranging tour of the field, from its beginnings in nuclear physics to the discovery of

quarks to present-day research into string theory, the mystery of antimatter, and the search for the elusive God particle.

An Institutional Perspective on the United Nations Criminal Tribunals Huw Llewellyn, 2021-03-22
Huw Llewellyn offers a comparative institutional analysis of the five United Nations criminal tribunals (for the former Yugoslavia, Rwanda, Sierra Leone, Cambodia and Lebanon), assessing their institutional strengths and weaknesses, and tracing the tension between their governance and judicial independence.
