Trade Mark Law in Europe Ulrich Hildebrandt,2024-01-16 Trade mark law practitioners agree that Ulrich Hildebrandt's Trade Mark Law in Europe hugely enhances their work. This fourth edition follows the same well-known, intensely practical, time-saving format, with each provision of current law (Directive 2015/2436) reproduced in its original English wording and annotated with relevant passages from all relevant decisions of the European Court of Justice, as well as relevant provisions of the Community Trade Mark Regulation and the national trade mark acts of all Member States implementing the Directive. The author's expert commentary on each provision expressly marks major changes to previous versions of the Directive, highlights when case law concerning a previous version remains relevant and translates passages that lack an official English text. Among the fundamental questions addressed are the following: When is it possible to register a geographical indication as a trademark? Are colours and sounds capable of registration? When may the reputation of a mark be invoked to protect it? How mundane could a sign be and still claim to be distinctive? When can it be said that there has been no genuine use of a trade mark? Where does the Court's function theory influence the trademark law? Given a topic or keyword, appendices assist in the quick finding of any provision of the Directive and relevant case law. There is no other resource presenting the original wording of ECJ case law, broken down by specific points of law and directly related on an article-by-article basis to EU and Member State trade mark legislation. As a highly organized presentation of key information, this is an ideal initial tool that makes any research into European trade mark law fast and easy, whether for academic purposes or actual legal practice. Lawyers, in-house counsel, judges, and academics will all welcome this new edition.

Renewable Energy in the GCC Countries Imern Jeridi Bachellerie,2012 The aim of this book is to help identify the potential role that renewable energy sources (RES) can play in the future energy mix of the GCC countries; it looks closely at the major past and present renewable energy initiatives and policies, as well as industrial and research capabilities in the region, with a specific focus on solar and wind energy technologies. In doing so, this study examines the drivers and requirements for the deployment of these energy sources and their possible integration into sectors as different as electricity generation, water desalination or green building. Illustrated by a wealth of practical cases and studies, and aspiring to be used as a reference book, this study aims to help researchers comprehend the overall capabilities and achievements of the GCC countries in the renewable energy field, so that perspectives on the region's strategic energy issues are objective and sustainable models are encouraged. Even when topics beyond their fields are discussed, researchers from many diverse fields will find the style to be accessible, while information remains detailed and 'technical'. The book's multidisciplinary approach gives voice to all stakeholders without judgment or partisanship, leaving the reader free to form his or her own opinion about the challenges that are at stake, and decide the course of action that is required by the current situation.
