Personal Names, Hitler, and the Holocaust I. M.

Nick,2019-05-13 During the Third Reich, in the name of national security, the Nazis introduced legislation to quickly and easily mark residents with Jewish heritage to expedite their isolation, deportation, and final extermination. Then as now, the tool used for this lethal demarcation was as innocuous as it was ubiquitous: personal names.

GDPR and Cyber Security for Business Information Systems

Antoni Gobeo,Connor Fowler,William J. Buchanan,2022-09-01 The General Data Protection Regulation is the latest, and one of the most stringent, regulations regarding Data Protection to be passed into law by the European Union. Fundamentally, it aims to protect the Rights and Freedoms of all the individuals included under its terms; ultimately the privacy and security of all our personal data. This requirement for protection extends globally, to all organisations, public and private, wherever personal data is held, processed, or transmitted concerning any EU citizen. Cyber Security is at the core of data protection and there is a heavy emphasis on the application of encryption and state of the art technology within the articles of the GDPR. This is considered to be a primary method in achieving compliance with the law. Understanding the overall use and scope of Cyber Security principles and tools allows for greater efficiency and more cost effective management of Information systems.GDPR and Cyber Security for Business Information Systems is designed to present specific and practical information on the key areas of compliance to the GDPR relevant to Business Information Systems in a global context.

Privacy vs. Security Sophie Stalla-Bourdillon,Joshua

Phillips,Mark D. Ryan,2014-08-27 Securing privacy in the current environment is one of the great challenges of today's democracies. Privacy vs. Security explores the issues of privacy and security and their complicated interplay, from a legal and a

technical point of view. Sophie Stalla-Bourdillon provides a thorough account of the legal underpinnings of the European approach to privacy and examines their implementation through privacy, data protection and data retention laws. Joshua Philips and Mark D. Ryan focus on the technological aspects of privacy, in particular, on today's attacks on privacy by the simple use of today's technology, like web services and e-payment technologies and by State-level surveillance activities.

Protecting Privacy in Data Release Giovanni

Livraga, 2015-05-18 This book presents a comprehensive approach to protecting sensitive information when large data collections are released by their owners. It addresses three key requirements of data privacy: the protection of data explicitly released, the protection of information not explicitly released but potentially vulnerable due to a release of other data, and the enforcement of owner-defined access restrictions to the released data. It is also the first book with a complete examination of how to enforce dynamic read and write access authorizations on released data, applicable to the emerging data outsourcing and cloud computing situations. Private companies, public organizations and final users are releasing, sharing, and disseminating their data to take reciprocal advantage of the great benefits of making their data available to others. This book weighs these benefits against the potential privacy risks. A detailed analysis of recent techniques for privacy protection in data release and case studies illustrate crucial scenarios. *Protecting Privacy in Data Release* targets researchers, professionals and government employees working in security and privacy. Advanced-level students in computer science and electrical engineering will also find this book useful as a secondary text or reference.

Future Data and Security Engineering. Big Data, Security and Privacy, Smart City and Industry 4.0 Applications Tran Khanh Dang,Josef Küng,Tai M. Chung,Makoto

Takizawa,2021-11-13 This book constitutes the proceedings of the 8th International Conference on Future Data and Security Engineering, FDSE 2021, held in Ho Chi Minh City, Vietnam, in November 2021.* The 28 full papers and 8 short were carefully reviewed and selected from 168 submissions. The selected papers are organized into the following topical headings: big data analytics and distributed systems; security and privacy engineering; industry 4.0 and smart city: data analytics and security; blockchain and access control; data analytics and healthcare systems; and short papers: security and data engineering. * The conference was held virtually due to the COVID-19 pandemic.

Data Privacy Nataraj Venkataramanan,Ashwin Shriram,2016-10-03 The book covers data privacy in depth with respect to data mining, test data management, synthetic data generation etc. It formalizes principles of data privacy that are essential for good anonymization design based on the data format and discipline. The principles outline best practices and reflect on the conflicting relationship between privacy and utility. From a practice standpoint, it provides practitioners and researchers with a definitive guide to approach anonymization of various data formats, including multidimensional, longitudinal, time-series, transaction, and graph data. In addition to helping CIOs protect confidential data, it also offers a guideline as to how this can be implemented for a wide range of data at the enterprise level.

Privacy Risk Analysis Sourya Joyee De,Daniel Le Métayer,2016-09-06 Privacy Risk Analysis fills a gap in the existing literature by providing an introduction to the basic notions, requirements, and main steps of conducting a privacy risk analysis. The deployment of new information technologies can lead to significant privacy risks and a privacy impact assessment should be conducted before designing a product or system that processes personal data. However, if existing privacy impact assessment frameworks and guidelines provide a good

deal of details on organizational aspects (including budget allocation, resource allocation, stakeholder consultation, etc.), they are much vaguer on the technical part, in particular on the actual risk assessment task. For privacy impact assessments to keep up their promises and really play a decisive role in enhancing privacy protection, they should be more precise with regard to these technical aspects. This book is an excellent resource for anyone developing and/or currently running a risk analysis as it defines the notions of personal data, stakeholders, risk sources, feared events, and privacy harms all while showing how these notions are used in the risk analysis process. It includes a running smart grids example to illustrate all the notions discussed in the book.

Data Privacy and Security David Salomon, 2003-05-20 Data Privacy focuses on keeping data private and covers classical cryptography, modern cryptography, and steganography in one volume.

Personal Data Privacy and Protection in a Surveillance Era Christina Akrivopoulou, Athanasios Psygkas, 2011 This book spans a number of interdependent and emerging topics in the area of legal protection of privacy and technology and explores the new threats that cyberspace poses to the privacy of individuals, as well as the threats that surveillance technologies generate in public spaces and in digital communication--Provided by publisher.

Private investigators Great Britain: Parliament: House of Commons: Home Affairs Committee, 2012-07-06 This report concludes that it is getting easier for anyone to advertise themselves as a private investigator - with modern communications and cheap surveillance devices - and while the industry remains unregulated, a number of serious risks remain. The Committee explores the risks of the involvement of private investigators in the justice system and law enforcement and the threat of corruption those links entail. The Committee recommends that the Government set up a robust licensing and registration system as soon as possible. Private investigators and their companies should be governed by a new Code of Conduct for Private Investigators. Under this system a criminal record for

breach of section 55 should disqualify individual from operating as private investigators. It also proposes that dealings between police and investigators should be recorded and that there should be a one year cooling off period between serving as a police officer and entering the investigation industry. While recognising the honest contribution made by most private investigators, this report highlights the involvement of some private investigators in an illegal market in personal data and calls again on the Government to strength the penalties for data offences. The Committee also calls on the Independent Police Complaints Commission to take direct control over investigations in cases alleging police corruption in relation to private investigators

Privacy and Security Issues in Information Systems Rein Turn, Willis H. Ware, Rand Corporation, 1976 Central in privacy protection are the rights of an individual to know what data are maintained on him, challenge their veracity and relevance, limit their nonroutine use or dissemination, and be assured that their quality, integrity, and confidentiality are maintained. In all computer systems that maintain and process valuable information, or provide services to multiple users concurrently, it is necessary to provide security safeguards against unauthorized access, use, or modifications of any data file. Computer systems

must also be protected against unauthorized use, disruption of operations, and physical damage.
