Lynda DeWitt

Look Up to See What the Weather Will Be Guy Brown, 2021-11-07 Should we bring raincoats to the big game? Will the fog lift before we get to the coast? Should we let in the animals in case there is a tornado this afternoon? People love talking about the weather, but it is more than just conversation. Weather can change rapidly and produce suddenly hazardous conditions. Studying data from satellites, radar, and other technology helps us prepare and stay safe. Animals, on the other hand, also need to predict the weather. They rely on their senses to know what to expect so they can stay warm in a blizzard, remain cool in a heat wave, or find food in a fog bank. Hours before we wake up, weather anchor Guy Brown is at the TV studio reviewing atmospheric readings, humidity rates, and Doppler reports. He needs to tell his viewers how to plan for the days ahead. He also introduces some of the animals who forecast weather in environments around the world. With Mario Lugo's vivid art, readers see some of the amazing clouds that bring us wildly different weather and learn how animals use their adaptations to weather the storms. Guy acquaints readers with cloud identification techniques while sharing a glimpse into survival--in town and in the wild.

Completing the Forecast National Research Council,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,Committee on Estimating and Communicating Uncertainty in Weather and Climate Forecasts,2006-10-09 Uncertainty is a fundamental characteristic of weather, seasonal climate, and hydrological prediction, and no forecast is complete without a description of its uncertainty. Effective communication of uncertainty helps people better understand the likelihood of a particular event and improves their ability to make decisions based on the forecast. Nonetheless, for decades, users of these forecasts have been conditioned to receive incomplete information about uncertainty. They have become used to single-valued (deterministic) forecasts (e.g., the high temperature will be 70 degrees Fahrenheit 9 days from now) and applied their own experience in determining how much confidence to place in the forecast. Most forecast products from the public and private sectors, including those from the National Oceanographic and Atmospheric Administration's National Weather Service, continue this deterministic legacy. Fortunately, the National Weather Service and others in the prediction community have recognized the need to view uncertainty as a fundamental part of forecasts. By partnering with other segments of the community to understand user needs, generate relevant and rich informational products, and utilize effective communication vehicles, the National Weather Service can take a leading role in the transition to widespread, effective incorporation of uncertainty information into predictions. Completing the Forecast makes recommendations to the National Weather Service and the broader prediction community on how to make this transition.
