Performance Art in China Thomas J. Berghuis,2006

Performance Art in China takes as its subject one of the most dynamic and controversial areas of experimental art practice in China. In his comprehensive study, Sydney-based theorist and art historian Thomas J. Berghuis introduces and investigates the idea of the role of the mediated subject of the acting body in art, a notion grounded in the realization that the body is always present in art practice, as well as its subsequent, secondary representations. Through a series of in-depth case studies, Berghuis reveals how, during the past 25 years, Chinese performance artists have acted out their art, often in opposition to the principles governing correct behavior in the public domain. In addition to a 25-year chronology of events, a systematic index of places, names and key terms, as well as a bibliography and a glossary in English and Chinese, this study also offers the reader numerous previously unpublished photos and documents.

The Stonewares of Yixing Kuei-hsiang Lo,1986-01-01 Despite its beauty, individuality and variety of design, the red or brown unglazed stoneware produced at Yixing in Jiangsu Province has received less attention than other branches of Chinese ceramic art. The Yixing potters have always specialized in the making of teapots, whose use became widespread during the Ming period as a result of the innovation of making tea from rolled leaves, rather than using it in the fine-ground, powdered form in which it had previously been supplied.

A New Thoughtfulness in Contemporary China Jörg Huber,Zhao Chuan,2014-03-31 Globalization euphoria and enthusiasm for the West are on the decline in contemporary China. Critical voices make themselves heard in artistic and cultural circles, turning towards their personal everyday lives to take stock. Their questions revolve around concrete experiences in the radical upheaval of lifeworlds, the continued significance of traditions after many of them have been thoroughly uprooted, and the paradoxes produced by the predominance of neo-liberalism. The 17 positions assembled in this volume provide a vivid illustration of such a »new thoughtfulness« in a wide variety of aspects ranging from

aesthetics and art to theatre and photography.

Feature Engineering for Machine Learning and Data Analytics

Guozhu Dong, Huan Liu, 2018-03-14 Feature engineering plays a

vital role in big data analytics. Machine learning and data mining algorithms cannot work without data. Little can be achieved if there are few features to represent the underlying data objects, and the quality of results of those algorithms largely depends on the quality of the available features. Feature Engineering for Machine Learning and Data Analytics provides a comprehensive introduction to

feature engineering, including feature generation, feature extraction, feature transformation, feature selection, and feature analysis and evaluation. The book presents key concepts, methods, examples, and applications, as well as chapters on feature engineering for major data types such as texts, images, sequences, time series, graphs, streaming data, software engineering data, Twitter data, and social media data. It also contains generic feature generation approaches, as well as methods for generating tried-and-tested, hand-crafted, domain-specific features. The first chapter defines the concepts of features and feature engineering, offers an overview of the book, and provides pointers to topics not covered in this book. The next six chapters are devoted to feature engineering, including feature generation for specific data types. The subsequent four chapters cover generic approaches for feature engineering, namely feature selection, feature transformation based feature engineering, deep learning based feature engineering, and pattern based feature generation and engineering. The last three chapters discuss feature engineering for social bot detection, software management, and Twitter-based applications respectively. This book can be used as a reference for data analysts, big data scientists, data

preprocessing workers, project managers, project developers, prediction modelers, professors, researchers, graduate students, and upper level undergraduate students. It can also be used as the primary text for courses on feature engineering, or as a supplement for courses on machine learning, data mining, and big data analytics.

China, Cambodia, and the Five Principles of Peaceful

Coexistence Sophie Richardson, 2009-12-10 Why would China jeopardize its relationship with the United States, the former Soviet Union, Vietnam, and much of Southeast Asia to sustain the Khmer Rouge and provide hundreds of millions of dollars to postwar Cambodia? Why would China invest so much in small states, such as those at the China-Africa Forum, that offer such small political, economic, and strategic return? Some scholars assume pragmatic or material concerns drive China's foreign policy, while others believe the government was once and still is guided by Marxist ideology. Conducting rare interviews with the actual policy makers involved in these decisions, Sophie Richardson locates the true principles driving China's foreign policy since 1954's Geneva Conference. Though they may not be right in a moral sense, China's ideals are based on a clear view of the world and the

interaction of the people within it—a philosophy that, even in an era of unprecedented state power, remains tied to the origins of the PRC as an impoverished, undeveloped state. The Five Principles of Peaceful Coexistence—mutual respect for territorial integrity and sovereignty; nonaggression; noninterference; equality and mutual benefit; and peaceful coexistence—live at the heart of Chinese foreign policy and set the parameters for international action. In this model of state-to-state relations, the practices of extensive diplomatic communication, mutual benefit, and restraint in domestic affairs become crucial to achieving national security and global stability.

The Art of Women in Contemporary China Patricia Eichenbaum Karetzky, 2020-01-08 This book presents in eight chapters the work of over 75 Chinese female artists, both pictorial and poetic. Their art is viewed within a framework of eight themes. The broad topics explored include the body; life; the representation of the experience of being a woman; home and the world; a view of children and other women; clothes; social conscience; fantasy; and abstraction—nonfigurative work and its viability as a medium to express the spiritual. These themes provide several lenses through which to enjoy and compare these artists' approaches and outputs.

The volume is unique in its inclusion of poetry by contemporary women whose voices articulate so many of the same concerns as the visual artists. In China, poetry has always been the prime form of artistic expression, and it remains so today. Looking at this poetry affords us a different means of appreciating the art of women in contemporary society.

Asian American Chronology Xiaojian Zhao,2009-06-30 Key moments in Asian American history come alive in this concise and accessible chronology. Understanding the history of Asians in America is key to understanding the development of America itself. *Asian American Chronology: Chronologies of the American Mosaic* presents the most influential events in Asian American history—as

well as key moments that have remained under the historical radar. This in-depth record covers events from the 18th century to the present day, including the 2008 Olympic Games in Beijing. Entries, organized chronologically by category, allow readers to trace the development of Asian peoples and culture in the United States over time, including the role of Chinese labor in building railroads, the importation of Filipino slaves, labor strikes and civil rights issues, Japanese-American internment, women's roles, literature, music, politics, and increased immigration in the mid-20th century. In addition to these broad topics, the book also treats individual events from the Rock Springs Massacre to the Gold Rush to the current prevalence of Japanese players in Major League Baseball.

A General History of Chinese Art Xifan Li, 2022-10-03 This volume investigates the artistic development during the Qing Dynasty, the last of imperial Chinese dynasties, and shows the importance of opera and playwriting during this time period. Further analysis is dedicated to the development of scroll painting and the revival of calligraphy and seal carving. **A General History of Chinese Art** comprises six volumes with a total of nine parts spanning from the Prehistoric Era until the 3rd year of Xuantong during the Qing Dynasty (1911). The work provides a

comprehensive compilation of in-depth studies of the development of art throughout the subsequent reign of Chinese dynasties and explores the emergence of a wide range of artistic categories such as but not limited to music, dance, acrobatics, singing, story telling, painting, calligraphy, sculpture, architecture, and crafts. Unlike previous reference books, A General History of Chinese Art offers a broader overview of the notion of Chinese art by asserting a more diverse and less material understanding of arts, as has often been the case in Western scholarship.
