**Chess Theory from Stamma to Steinitz, 1735–1894** Frank Hoffmeister,2023-08-11 Most chess biographies present the games of famous players--but not their writings. Filling that gap, this book begins with Syrian master and author of chess studies Philip Stamma, and finishes with the first world champion William Steinitz. The main novelties in opening, middlegame and endgame theory in the 160 year period are examined and biographical sketches put the contributions of more than 30 masters into context. The author presents many new insights--for example, regarding the origins of the Ponziani Opening, the Dutch Defense and the Petroff Defense. French star La Bourdonnais used other sources for almost every part of his *Nouveau Traite*. Morphy's analysis of the Philidor Defense was faulty and Anderssen's play included many positional ideas. Harrwitz and Neumann published modern treatises long before Steinitz came out with his *Modern Chess Instructor*. Many ending themes belong to less well-known authors, such as Cozio, Chapais, van Zuylen van Nyevelt, Sarratt, Kling and Horwitz, Berger and Salvio.

**Better Chess Openings** Jef Kaan,2014-11-19 This book contains an overview, selection, and improvement of chess openings; both for (post-)beginners and intermediate players (corrected copy Dec 2021, with figurines!). Including a unique and timeless 'repertoire', carefully selected for home player level (1.e4) and/or more advanced (chess club) players. For the latter, in addition to a second, more in depth repertoire with 1.e4, an optional repertoire is given with 1.d4 (besides some gambits, or general opening systems as well). The most suitable opening moves were selected by thorough analysis, to build up a rock-solid B/W 'repertoire', for two categories of players. Not only mentioning of the opening names, but also of most sub-variations. Compared with up to date opening books and actual GM games. Many diagrams to enhance memorization and understanding. An ideal study guide, and only opening book a chess player needs until master level.

**Von Neumann, Morgenstern, and the Creation of Game Theory** Robert Leonard,2010-06-28 A reconstruction of the creation of game theory in the twentieth century by John von Neumann and Oskar Morgenstern.

*Thought and Choice in Chess* Adriaan D. de Groot,2014-07-24

**Thought and Choice in Chess** Adriaan D. de Groot,2008 Annotation. What does a chessmaster think when he prepares his next move? How are his thoughts organized? Which methods and strategies does he use by solving his problem of choice? To answer these questions, the author did an experimental study in 1938, to which famous chessmasters participated (Alekhine, Max Euwe and Flohr). This book is still usefull for everybody who studies cognition and artificial intelligence. This title can be previewed in Google Books - <http://books.google.com/books?vid=ISBN9789053569986>.

**The LaTeX Graphics Companion** Michel Goossens,S. P. Q. Rahtz,Frank Mittelbach,1997 Complementing The LaTeX Companion, this new graphics companion addresses one of the most common needs among users of the LaTeX typesetting system: the incorporation of graphics into text. It provides the first full description of the standard LaTeX color and graphics packages, and shows how you can combine TeX and PostScript capabilities to produce beautifully illustrated pages. You will learn how to incorporate graphic files into a LaTeX document, program technical diagrams using several different languages, and achieve special effects with fragments of embedded PostScript. Furthermore, you'll find detailed descriptions of important packages like Xy-pic, PSTricks, and METAPOST; the dvips dvi to PostScript driver; and Ghostscript.

**Chess Skill in Man and Machine** P. W. Frey,2012-12-06 Ten years of intensive effort on computer chess have produced notable progress. Although the background information and technical details that were written in 1975 for the first edition of this book are still valid in most essential points, hardware and software refinements have had a major impact on the effectiveness of these ideas. The current crop of chess machines are performing at unexpectedly high levels. The approach epitomized by the series of programs developed by David Slate and Larry Atkin at Northwestern in the middle 1970s (i. e. , a sophisticated search algorithm using very little chess knowledge) was expected to reach an asymptotic level of performance no higher than that of a class A player (USCF rating between 1800 and 2000). This perspective was argued quite vigorously by Eliot Hearst in Chapter 8 of the first edition and was held at that time by many chess experts. Subsequent events have clearly demonstrated that the asymptotic performance level for this type of program is at least as high as the master level (USCF rating between 2200 and 2400). Current discussions now focus upon whether the earlier reservations were wrong in principle or simply underestimated the asymptote. If there is a real barrier which will prevent this type of program from attaining a world championship level of performance, it is not evident from the steady progress which has been observed during the last decade.
