Statistical Tools for Epidemiologic Research Steve Selvin,2011-01-14 In this innovative new book, Steve Selvin provides readers with a clear understanding of intermediate biostatistical methods without advanced mathematics or statistical theory (for example, no Bayesian statistics, no causal inference, no linear algebra and only a slight hint of calculus). This text answers the important question: After a typical first-year course in statistical methods, what next? Statistical Tools for Epidemiologic Research thoroughly explains not just how statistical data analysis works, but how the analysis is accomplished. From the basic foundation laid in the introduction, chapters gradually increase in sophistication with particular emphasis on regression techniques (logistic, Poisson, conditional logistic and log-linear) and then beyond to useful techniques that are not typically discussed in an applied context. Intuitive explanations richly supported with numerous examples produce an accessible presentation for readers interested in the analysis of data relevant to epidemiologic or medical research.

Triglycerides and Cholesterol Research Linda T. Welson,2006 Triglycerides are the chemical form in which most fat exists in food as well as in the body. They are also present in blood plasma and, in association with cholesterol, form the plasma lipids. Triglycerides in plasma are derived from fats eaten in foods or made in the body from other energy sources like carbohydrates. Calories ingested in a meal and not used immediately by tissues are converted to triglycerides and transported to fat cells to be stored. Hormones regulate the release of triglycerides from fat tissue so they meet the body's needs for energy between meals. Cholesterol is a soft, waxy substance found among the lipids (fats) in the bloodstream and in all the body's cells. It's an important part of a healthy body because it's used to form cell membranes, some hormones and is needed for other functions. But a high level of cholesterol in the blood -- hypercholesterolemia -- is a major risk factor for coronary heart disease, which leads to heart attack. Cholesterol and other fats can't dissolve in the blood. They have to be transported to and from the cells by special carriers called lipoproteins. This book presents leading new research from around the world.

The Great Cholesterol Myth Jonny Bowden,Stephen Sinatra,2012-11-01 Heart disease is the #1 killer. However, traditional heart disease protocols--with their emphasis on lowering cholesterol--have it all wrong. Emerging science is showing that cholesterol levels are a poor predictor of heart disease and that standard prescriptions for lowering it, such as ineffective low-fat/high-carb diets and serious, side-effect-causing statin drugs, obscure the real causes of heart disease. Even doctors at leading institutions have been misled for years based on creative reporting of research results from pharmaceutical companies intent on supporting the \$31-billion-a-year cholesterol-lowering drug industry. The Great Cholesterol Myth reveals the real culprits of heart disease, including: - Inflammation - Fibrinogen - Triglycerides - Homocysteine - Belly fat - Triglyceride to HCL ratios - High glycemic levels Bestselling health authors Jonny Bowden, Ph.D., and Stephen Sinatra, M.D. give readers a 4-part strategy based on the latest studies and clinical findings for effectively preventing, managing, and reversing heart disease, focusing on diet, exercise, supplements, and stress and anger management. Get proven, evidence-based strategies from the experts with The Great Cholesterol Myth. MYTHS VS. FACTS Myth-High cholesterol is the cause of heart disease. Fact-Cholesterol is only a minor player in the cascade of inflammation which is a cause of heart disease. Myth-High cholesterol is a predictor of heart attack. Fact-There is no correlation between cholesterol and heart attack. Myth-Lowering cholesterol with statin drugs will prolong your life. Fact-There is no data to show that statins have a significant impact on longevity. Myth-Statin drugs are safe. Fact-Statin drugs can be extremely toxic including causing death. Myth-Statin drugs are useful in men, women and the elderly. Fact-Statin drugs do the best job in middle-aged men with coronary disease. Myth-Statin drugs are useful in middle-aged men with coronary artery disease because of its impact on cholesterol. Fact-Statin drugs reduce inflammation and improve blood viscosity (thinning blood). Statins are extremely helpful in men with low HDL and coronary artery disease. Myth-Saturated fat is dangerous. Fact-Saturated fats are not dangerous. The killer fats are the trans fats from partially hydrogenated oils. Myth-The higher the cholesterol, the shorter the lifespan. Fact-Higher cholesterol protects you from gastrointestinal disease, pulmonary disease and hemorrhagic stroke. Myth-A high carbohydrate diet protects you from heart disease. Fact-Simple processed carbs and sugars predispose you to heart disease. Myth-Fat is bad for your health. Fact-Monounsaturated and saturated fats protect you from metabolic syndrome. Sugar is the foe in cardiovascular disease. Myth-There is good (HDL) cholesterol and bad (LDL) cholesterol. Fact-This is over-simplistic. You must fractionate LDL and HDL to assess the components. Myth-Cholesterol causes heart disease. Fact-Cholesterol is only a theory in heart disease and only the small component of LP(a) or "bb shot" LDL predisposes one to oxidation and inflammation.

Clinical Methods Henry Kenneth Walker,Wilbur Dallas Hall,John Willis Hurst,1990 A guide to the techniques and analysis of clinical data. Each of the seventeen sections begins with a drawing and biographical sketch of a seminal contributor to the discipline. After an introduction and historical survey of clinical methods, the next fifteen sections are organized by body system. Each contains clinical data items from the history, physical examination, and laboratory investigations that are generally included in a comprehensive patient evaluation. Atherothrombosis and Coronary Artery Disease Valentin Fuster,Eric J. Topol,Elizabeth G. Nabel,2005 Written by the world's foremost authorities, this volume provides comprehensive coverage of current approaches to the prevention, diagnosis, and management of atherothrombosis and its coronary and noncoronary complications. This edition has been thoroughly updated, sharply focused on clinical information, and trimmed to one manageable volume. Coverage begins with a review of risk factors and prevention, emphasizing lipid abnormalities, hypertension, smoking, diabetes, and obesity. Subsequent sections examine the pathogenesis of atherosclerosis, markers and imaging, acute coronary syndromes, chronic stable angina, and noncoronary atherothrombosis. Clinical presentations, medical management, and the latest interventional strategies are included.
