Choo-choo Charlie Presents Steam Locomotives Bob Shepherd, 2016-02-26 Strawberries Press (just refer to us as Strawberries) is a new publishing company with refreshingly different ideas about writing, illustrating, and developing children's picture books. We refer to the presentations and elements that go into the production of our picture books as the interactive reading and learning concept. Strawberries books are beautifully illustrated and designed to be high-quality publications that children will love and treasure. For example, our interactive picture book for train enthusiasts entitled Choo-Choo Charlie Presents Steam Locomotives provides a fun story by Charlie the Locomotive while teaching kids about steam engines and how they work, the definition of a train, the history of steam locomotives, and how to determine a locomotive's wheel configuration number. Children even get to watch a singing cartoon video of Choo-Choo Charlie the Engineer and how he uses candy to make his train run. A fun test is included at the end of the book. Just send Strawberries the completed test and your child will receive a beautifully printed Reading Certificate that he or she can proudly frame and display for all his or her friends to see. Reading traditional picture books, watching videos, visiting websites that contain associated subjects, taking fun tests, and earning Reading Certificates represent the interactive parts of the Strawberries reading and learning concept. Strawberries picture books are specifically written for preadolescents between the ages of approximately 8 and 12. Younger readers with advanced reading skills and older readers who enjoy simpler subject presentations will also benefit from Strawberries books.

The World's Last Steam Trains Chris Davies, 2022-03-30 China was the last country in the world to manufacture and operate steam locomotives. By the early 1980s, there were an estimated 10,000 operational steam locomotives in the country, but by the 1990s, diesel and electric locomotives started to replace them on the main lines and the number in service reduced substantially as the millennium approached. The last steam locomotives were finally withdrawn from China Rail in 2003. After that, some continued to operate heavy freight trains on local railways for a short while, but most were deployed for use on the country's industrial railways, mainly at coal mines and steel works. This trend continued into the first decade of the 21st century, but subsequently, the number of steam engines in service declined substantially and were confined to just a handful of industrial locations. Steam rail operations in China are now facing extinction. The modernization of the railways with the switch from steam to diesel, the closure of unsafe and loss-making collieries and China's drive to reduce pollution and combat climate change from burning coal, have all conspired towards the demise of the industrial lines operating steam in China. This book looks at the last of the standard-gauge steam operations in China, including Sandaoling, the last steam-worked opencast

coal mine in the world; Fuxin, a coal-mining city in Liaoning Province, which until recently, operated the largest surviving fleet of SY locomotives; Baiyin, in Gansu Province, which operated some of the last steam-hauled passenger trains in the world; and Wu Jiu, a remote coal-mining outpost in Inner Mongolia. Beautifully illustrated with over 120 color photographs and a description of the operations, this is a striking portrait of the last of the world's operating steam trains.
