*Framing a National Narrative* Marte H. Hult, 2003 The first in-depth analysis of the independent work of Norwegian folklorist Peter Christen Asbjørnsen, and a unique look at Norwegian identity formation. When Peter Christen Asbjørnsen (1812-1885) published his collection of folktales, which became a classic of Norway's romantic period, his accomplishment went far beyond the folklorist's goal of documenting fascinating stories from various regions of his country. His *Norske Imdreeventyr og folkesagn* was not only a work of literature but also a codification of certain assumptions for the readers of its time. It reflected cultural and intellectual currents in microcosm and helped to create a worldview that is still relevant in Norway today. In this long overdue analysis of Asbjørnsen's collection, Marte Hvam Hult establishes him as a major force in the development of Norwegian national identity and argues that his work should assume a more prominent place in the Norwegian literary canon. Asbjørnsen is best known as Jorgen Moe's collaborator on the famous collection of folktales, *Norske folkeeventyr*, which sparked debate about how the Norwegian language should appear in print. In *Norske huldreeventyr og folkesagn*, Asbjørnsen blended a literary perspective with that of a folklorist to create a remarkable synthesis of the real and the imagined. Studying this collection from a literary point of view, Hult considers such themes as the appropriation of a harsh natural environment and human interaction with both the ethnic and supernatural Other. She discusses how Asbjørnsen helped to establish the modern Norwegian novel and how his depiction of plurality can help Norwegians forge a more cosmopolitan national identity.

**Frame by Frame** Hannah Frank, 2019-05-07 At publication date, a free ebook version of this title will be available through Luminos, University of California Press's

Open Access publishing program. Visit [www.luminosoa.org](http://www.luminosoa.org) to learn more. In this beautifully written and deeply researched study, Hannah Frank provides an original way to understand American animated cartoons from the Golden Age of animation (1920–1960). In the pre-digital age of the twentieth century, the making of cartoons was mechanized and standardized: thousands of drawings were inked and painted onto individual transparent celluloid sheets (called “cels”) and then photographed in succession, a labor-intensive process that was divided across scores of artists and technicians. In order to see the art, labor, and technology of cel animation, Frank slows cartoons down to look frame by frame, finding hitherto unseen aspects of the animated image. What emerges is both a methodology and a highly original account of an art formed on the assembly line.

Advances in Visual Information Systems Robert Laurini, 2000-10-18 Presently, in our world, visual information dominates. The turn of the millenium marks the age of visual information systems. Enabled by picture sensors of all kinds turning digital, visual information will not only enhance the value of existing information, it will also open up a new horizon of previously untapped information sources. There is a huge demand for visual information access from the consumer. As well, the handling of visual information is boosted by the rapid increase of hardware and Internet capabilities. Advanced technology for visual information systems is more urgently needed than ever before: not only new computational methods to retrieve, index, compress and uncover pictorial information, but also new metaphors to organize user interfaces. Also, new ideas and algorithms are needed which allow access to very large databases of digital pictures and videos. Finally we should not forget new systems with visual interfaces integrating the above components into new types of image, video or multimedia databases and hyperdocuments. All of these technologies will enable the construction of systems that are radically different from conventional information systems. Many novel issues will need to be addressed: query formulation for pictorial information, consistency management thereof, indexing and assessing the quality of these systems. Historically, the expression Visual Information Systems can be understood either as a system for image information or as visual system for any kind information.
