**Stereoscopic Cinema and the Origins of 3-D Film, 1838-1952** Ray Zone,2014-02-03 Though it may come as a surprise to both cinema lovers and industry professionals who believe that 3-D film was born in the early 1950s, stereoscopic cinema actually began in 1838, more than 100 years before the 3-D boom in Hollywood was created by the release of Arch Oboler's African adventure film, Bwana Devil, filmed in Natural Vision 3-D. Stereoscopic Cinema and the Origins of 3-D Film, 1838--1952, is a comprehensive prehistory of the stereoscopic motion picture. In the late nineteenth century, stereoview cards were popular worldwide, and soon filmmakers wanted to capture these living pictures with motion, sound, and color. Writing a new chapter in the history of early cinema, Ray Zone not only discusses technological innovation and its cultural context but also examines the aesthetic aspects of stereoscopic cinema in its first century of production.

**3-D Filmmakers** Ray Zone,2005 La 4e de couv. porte : In '3-D filmmakers : conversations with creators of stereoscopic motion pictures', stereographer and film historian Ray Zone presents the insights of twenty-one professionals who have worked in this specialized field. In this collection of interviews, Zone explores the art and craft of 3-D filmmaking with producers, screenwriters, directors, and cinematographers. Interviewees range from Arch Oboler - producer of Bwana Devil, the 1952 feature that triggered the boom of 3-D films - to producers and cinematographers who have worked with single-strip 3-D film production in the 1970s and '80s, 3-D films in theme parks, current IMAX films, and the new and still-evolving format of digital 3-D cinema. These interviews provide a fascinating behind-the-scenes look at more than five decades of this unique medium. This one-of-a-kind book will interest aspiring filmmakers, stereo photography enthusiasts, cinema buffs, devotees of popular culture, and film historians.

**3D Moviemaking** Bernard Mendiburu,2013-07-01 Hollywood is going 3D, read this book to understand why and how, and to secure your next job on a 3D movie. Making a 3D movie is much more than shooting with a 3D camera and showing it in a 3D theater. Each and every step of the movie production cycle will be affected by 3D, just like sound and color affected the whole industry. After an introduction on how the human brain perceive depth, this book explains, in a step-by-step approach, how 3D affects screen writing, art direction, principal photography, editing, visual effects and even movies distribution. It's a must read for anyone in the profession who wants to understand the next revolution in cinema.

*A History of Three-Dimensional Cinema* David A. Cook,2021-09-14 A History of Three-Dimensional Cinema chronicles 3-D cinema as a single, continuous and coherent medium, proceeding from 19th-century experiments in stereoscopic photography and lantern projection (1839–1892) to stereoscopic cinema's "long novelty period" (1893–1952). It proceeds to examine the first Hollywood boom in anaglyphic stereo (1953–1955), when the mainstream industry produced 69 features in 3-D, mostly action films that could exploit the depth illusion, but also a handful of big-budget films—for example, Kiss Me Kate (George Sidney, 1953) and Dial M for Murder (Alfred Hitchcock, 1954)—until audiences tired of the process; the anaglyphic revival of 1970–1985, when 3-D was sustained as a novelty feature in sensational genres like soft-core pornography and horror; the age of IMAX 3-D (1986–2008); the current era of digital 3-D cinema, which began in 2009 when James Cameron's Avatar became the highest-grossing feature of all time and the studios once again stamped into 3-D production; and finally the future promise of Virtual Reality.

**Expressive Spaces in Digital 3D Cinema** Owen Weetch,2016-10-07 This book puts forward a more considered perspective on 3D, which is often seen as a distracting gimmick at odds with artful cinematic storytelling. Owen Weetch looks at how stereography brings added significance and expressivity to individual films that all showcase remarkable uses of the format. Avatar, Gravity, The Hole, The Great Gatsby and Frozen all demonstrate that stereography is a rich and sophisticated process that has the potential to bring extra meaning to a film's narrative and themes. Through close reading of these five very different examples, Expressive Spaces in Digital 3D Cinema shows how being sensitive to stereographic manipulation can nuance and enrich the critical appreciation of stereoscopic films. It demonstrates that the expressive placement of characters and objects within 3D film worlds can construct meaning in ways that are unavailable to 'flat' cinema.

*Think in 3D* Clyde Dsouza,2012 Think in 3DStereoscopic 3D is crossing over from Hollywood into mainstream Television, Advertising, and even Education. This book is designed to inspire a new kind of 3D thinking in Directors, Cinematographers and Film School Graduates, to encourage further exploration and integration of Stereoscopic 3D into the process of visual storytelling.Stereoscopic 3D should not only be about rigs and parallax any more than traditional filmmaking is about focal lengths and aspect ratios. Certainly there are techniques and considerations that have to be taken into account when making good Stereo 3D, but ultimately it is only how Stereoscopic 3D influences the audience's experience of a film that is

important. This book is not a nuts and bolts, mirror rigs and depth budget handbook; instead it is a dialogue, a story and conversation designed to provoke new kinds of Stereo 3D thinking, as we delve into this fascinating new medium of visual communication. The book will lead you through an exploration of the most important questions about S3D's present, then inspire you to venture into the Why and What If? Hopefully that will lead to insights and inspire Directors, DPs and upcoming Stereographers, to unleash the true potential that S3D has as an integral, enriching part of the filmmaking process.

*Digital Visual Effects in Cinema* Stephen Prince, 2011-12-07 Avatar. Inception. Jurassic Park. Lord of the Rings. Ratatouille. Not only are these some of the highest-grossing films of all time, they are also prime examples of how digital visual effects have transformed Hollywood filmmaking. Some critics, however, fear that this digital revolution marks a radical break with cinematic tradition, heralding the death of serious realistic movies in favor of computer-generated pure spectacle. *Digital Visual Effects in Cinema* counters this alarmist reading, by showing how digital effects-driven films should be understood as a continuation of the narrative and stylistic traditions that have defined American cinema for decades. Stephen Prince argues for an understanding of digital technologies as an expanded toolbox, available to enhance both realist films and cinematic fantasies. He offers a detailed exploration of each of these tools, from lighting technologies to image capture to stereoscopic 3D. Integrating aesthetic, historical, and theoretical analyses of digital visual effects, *Digital Visual Effects in Cinema* is an essential guide for understanding movie-making today.

*3-D Revolution* Ray Zone, 2012 Stereoscopic cinema began in the early 19th century and exploded in the 1950s in Hollywood. Its status as an enduring genre was confirmed in 2009 by the success of 3-D movie 'Avatar'.
