The Routledge Companion to Smart Cities Katharine S. Willis, Alessandro Aurigi, 2020-03-27 The Routledge Companion to Smart Cities explores the question of what it means for a city to be 'smart', raises some of the tensions emerging in smart city developments and considers the implications for future ways of inhabiting and understanding the urban condition. The volume draws together a critical and cross-disciplinary overview of the emerging topic of smart cities and explores it from a range of theoretical and empirical viewpoints. This timely book brings together key thinkers and projects from a wide range of fields and perspectives into one volume to provide a valuable resource that would enable the reader to take their own critical position within the topic. To situate the topic of the smart city for the reader and establish key concepts, the volume sets out the various interpretations and aspects of what constitutes and defines smart cities. It investigates and considers the range of factors that shape the characteristics of smart cities and draws together different disciplinary perspectives. The consideration of what shapes the smart city is explored through discussing three broad 'parts' – issues of governance, the nature of urban development and how visions are realised – and includes chapters that draw on empirical studies to frame the discussion with an understanding not just of the nature of the smart city but also how it is studied, understood and reflected upon. The Companion will appeal to academics and advanced undergraduates and postgraduates from across many disciplines including Urban Studies, Geography, Urban Planning, Sociology and Architecture, by providing state of the art reviews of key themes by leading scholars in the field, arranged under clearly themed sections.

The Fight to Save the Town Michelle Wilde Anderson, 2022-06-21 A sweeping and eye-opening study of wealth inequality and the dismantling of local government in four working-class US cities that passionately argues for reinvestment in people-centered leadership and offers “a welcome reminder of what government can accomplish if given the chance” (San Francisco Chronicle). Decades of cuts to local government amidst rising concentrations of poverty have wreaked havoc on communities left behind by the modern economy. Some of these discarded places are rural. Others are big cities, small cities, or historic suburbs. Some vote blue, others red. Some are the most diverse communities in America, while others are nearly all white, all Latino, or all Black. All are routinely trashed by outsiders for their poverty and their politics. Mostly, their governments are just broke. Forty years

after the anti-tax revolution began protecting wealthy taxpayers and their cities, our high-poverty cities and counties have run out of services to cut, properties to sell, bills to defer, and risky loans to take. In this “astute and powerful vision for improving America” (Publishers Weekly), urban law expert and author Michelle Wilde Anderson offers unsparing, humanistic portraits of the hardships left behind in four such places. But this book is not a eulogy or a lament. Instead, Anderson travels to four blue-collar communities that are poor, broke, and progressing. Networks of leaders and residents in these places are facing down some of the hardest challenges in American poverty today. In Stockton, California, locals are finding ways, beyond the police department, to reduce gun violence and treat the trauma it leaves behind. In Josephine County, Oregon, community leaders have enacted new taxes to support basic services in a rural area with fiercely anti-government politics. In Lawrence, Massachusetts, leaders are figuring out how to improve job security and wages in an era of backbreaking poverty for the working class. And a social movement in Detroit, Michigan, is pioneering ways to stabilize low-income housing after a wave of foreclosures and housing loss. Our smallest governments shape people’s safety, comfort, and life chances. For decades, these governments have no longer just reflected inequality—they have helped drive it. But it doesn’t have to be that way. Anderson shows that “if we learn to save our towns, we will also be learning to save ourselves” (The New York Times Book Review).

Urban Planning Education Andrea I. Frank, Christopher Silver, 2017-06-26 This book examines planning education provision and approaches globally, through a comparative and longitudinal perspective. It explores the emergence of planning education in the 20th century, with its rich variation and yet a remarkable degree of cross-fertilization. Each of the sections of the book is framed by an overview essay which has been prepared by the editors to provide the reader with a critical exposure to relevant scholarship drawing on the detailed case studies and exploratory essays on key issues in planning education. The first part of this volume focuses on the emergence of planning education programs in the twentieth century as a way to understand the current planning education environment. Then we explore how education in urban, regional and spatial planning has developed in different ways in different countries and continents. The final part of this volume aims to envision how planning can adapt and develop to remain relevant to the development of human environments in the 21st century. Urban planning education has become a pervasive practice throughout the world as urbanization and development pressures have increased over the past half century, and as demand increased for professional trained experts to guide those processes. The approaches vary widely, based in part upon the discipline from which the planning program developed as well as the context-specific challenges within the country or region where the program resides.

The machinic city Marcos P. Dias, 2021-03-23 As human and machine agency become increasingly intermingled and digital media is overlaid onto the urban landscape, The machinic city argues that performance art can help us to understand contemporary urban living. Dias analyses several performance art interventions from artists such as Blast Theory, Rafael Lozano-Hemmer and Rimini Protokoll, which draw from a rich history of avant-garde art movements to create spaces for deliberation and reflection on urban life and to speculate on its future. While

cities are increasingly controlled by autonomous processes mediated by technical machines, Dias analyses the performative potential of the aesthetic machine, as it assembles with media, capitalist, human and urban machines. The aesthetic machine of performance art in urban space is examined through its different components – design, city and technology actants. This unveils the unpredictable nature and emerging potential of performance art as it unfolds in the machinic city, which consists of assemblages of efficient and not-so-efficient machines.

Critical Media Pedagogy Ernest Morrell, Rudy Duenas, Veronica Garcia, Jorge Lopez, 2015-04-25 This practical book examines how teaching media in high school English and social studies classrooms can address major challenges in our educational system. The authors argue that, in addition to providing underserved youth with access to 21st century learning technologies, critical media education will help improve academic literacy achievement in city schools. Critical Media Pedagogy presents first-hand accounts of teachers who are successfully incorporating critical media education into standards-based lessons and units. The book begins with an analysis of how media have been conceptualized and studied; it identifies the various ways that youth are practicing media, as well as how these practices are constantly increasing in sophistication. Finally, it offers concrete examples of how to develop a rigorous, standards-based content area curriculum that embraces new media practices and features media production.

More Playful User Interfaces Anton Nijholt, 2015-05-18 This book covers the latest advances in playful user interfaces – interfaces that invite social and physical interaction. These new developments include the use of audio, visual, tactile and physiological sensors to monitor, provide feedback and anticipate the behavior of human users. The decreasing cost of sensor and actuator technology makes it possible to integrate physical behavior information in human-computer interactions. This leads to many new entertainment and game applications that allow or require social and physical interaction in sensor- and actuator-equipped smart environments. The topics discussed include: human-nature interaction, human-animal interaction and the interaction with tangibles that are naturally integrated in our smart environments. Digitally supported remote audience participation in artistic or sport events is also discussed. One important theme that emerges throughout the book is the involvement of users in the digital-entertainment design process or even design and implementation of interactive entertainment by users themselves, including children doing so in educational settings.

Seeing Cities Through Big Data Piyushimita (Vonu) Thakuriah, Nebiyu Tilahun, Moira Zellner, 2016-10-07 This book introduces the latest thinking on the use of Big Data in the context of urban systems, including research and insights on human behavior, urban dynamics, resource use, sustainability and spatial disparities, where it promises improved planning, management and governance in the urban sectors (e.g., transportation, energy, smart cities, crime, housing, urban and regional economies, public health, public engagement, urban governance and

political systems), as well as Big Data's utility in decision-making, and development of indicators to monitor economic and social activity, and for urban sustainability, transparency, livability, social inclusion, place-making, accessibility and resilience.

Internet of Things - Global Technological and Societal Trends from Smart Environments and Spaces to Green Ict Ovidiu Vermesan, Peter Friess, 2022-09-01 The book's aim is to define the Internet of Things (IoT) in a global view, present the research agenda for Internet of Things technologies by addressing the new technological developments and providing a global balanced coverage of the challenges and the technical and industrial trends. Energy consumption by the data, communication and networking devices and global CO2 emission is increasing exponentially. ICT has a dual role in this process: it accounts for about two percent of global CO2 emissions and at the same the ICT including IoT technologies and applications have a direct effect on lowering CO2 emissions, increasing energy efficiency, reducing power consumption, and achieving efficient waste recycling. The book builds on the ideas put forward by the European research Cluster on the Internet of Things Strategic Research Agenda and presents global views and state of the art results on the challenges facing the research, development and deployment of IoT at the global level. IoT together with the other emerging Internet developments such as Internet of Energy, Media, People, Services, Business/Enterprises are the backbone of the digital economy, the digital society and the foundation for the future knowledge based economy and innovation society. IoT developments show that we will have 16 billion connected devices by the year 2020, which will average out to six devices per person on earth and to many more per person in digital societies. Devices like smart phones and machine to machine or thing to thing communication will be the main drivers for further IoT development.

Gender in Spanish Urban Spaces Maria C. DiFrancesco, Debra J. Ochoa, 2018-01-03 This edited collection examines the synergistic relationship between gender and urban space in post-millennium Spain. Despite the social progress Spain has made extending equal rights to all citizens, particularly in the wake of the Franco regime and radically liberating Transición, the fact remains that not all subjects—particularly, women, immigrants, and queers—possess equal autonomy. The book exposes visible shifts in power dynamics within the nation's largest urban capitals—Madrid and Barcelona—and takes a hard look at more peripheral bedroom communities as all of these spaces reflect the discontent of a post-nationalistic, economically unstable Spain. As the contributors problematize notions of public and private space and disrupt gender binaries related with these, they aspire to engender discussion around civic status, the administration of space and the place of all citizens in a global world.

The Great Good Place Ray Oldenburg, 1999-08-18 The landmark survey that celebrates all the places where people hang out--and is helping to spawn their revival A New York Times Book Review Editor's Choice Third places, or

great good places, are the many public places where people can gather, put aside the concerns of home and work (their first and second places), and hang out simply for the pleasures of good company and lively conversation. They are the heart of a community's social vitality and the grassroots of a democracy. Author Ray Oldenburg portrays, probes, and promotes these great good places--coffee houses, cafes, bookstores, hair salons, bars, bistros, and many others both past and present--and offers a vision for their revitalization. Eloquent and visionary, this is a compelling argument for these settings of informal public life as essential for the health both of our communities and ourselves. And its message is being heard: Today, entrepreneurs from Seattle to Florida are heeding the call of The Great Good Place--opening coffee houses, bookstores, community centers, bars, and other establishments and proudly acknowledging their indebtedness to this book.

Dying for an iPhone Jenny Chan, Mark Selden, Ngai Pun, 2020-06-02 Suicides, excessive overtime, and hostility and violence on the factory floor in China. Drawing on vivid testimonies from rural migrant workers, student interns, managers and trade union staff, *Dying for an iPhone* is a devastating expose of two of the world's most powerful companies: Foxconn and Apple. As the leading manufacturer of iPhones, iPads, and Kindles, and employing one million workers in China alone, Taiwanese-invested Foxconn's drive to dominate global electronics manufacturing has aligned perfectly with China's goal of becoming the world leader in technology. This book reveals the human cost of that ambition and what our demands for the newest and best technology means for workers. Foxconn workers have repeatedly demonstrated their power to strike at key nodes of transnational production, challenge management and the Chinese state, and confront global tech behemoths. *Dying for an iPhone* allows us to assess the impact of global capitalism's deepening crisis on workers.'
