Post-AGB Objects as a Phase of Stellar Evolution R. Szczerba, S.K.

Górny, 2001-08-31 The term proto-planetary nebulae (PPNe), in the context of the late stages of stellar evolution, was created just over 20 years ago, to express the belief that in the near future these objects will become planetary nebulae (PNe). The first proto-planetary nebulae (also called post-Asymptotic Giant Branch or post-AGB objects) were discovered in the mid-1970s in the course of the Air Force Sky Survey. Investigation of this phase of stellar evolution developed very rapidly in the 1980s after the IRAS mission when it became clear that proto-planetary nebulae emit a significant part of their energy in the mid- and far-infrared. A new impetus in this field began in the 1990s with high spatial resolution imaging in mid-infrared and optical wavelengths. Evidence has been found that proto-planetary nebulae (at least their central parts) are quite asymmetric while shells of AGB stars display spherical shapes. The most intriguing challenge now is to understand which physical processes are dominant during formation and evolution of proto-planetary nebulae. Is it magnetic field, evolution in binary systems, planets, axisymmetric superwind mass loss and its further shaping by fast wind, collimated jets interacting with a spherically symmetric AGB remnant or maybe an interplay between these different processes? Another challenge is to explain why the mass loss process near the end of the AGB evolution is modulated on timescales of a few hundred years. The model presented during this workshop seems to be very promising in this respect.

Cognitive-Behavioral Management of Tic Disorders Kieron O'Connor, 2005-08-05

Tics affect more than 10% of the population, and can be an unpleasant and disruptive problem. They include chronic tic disorder, Tourette's syndrome and habit disorders such as hair pulling, nail biting and scratching. Treatment is either by medication (without convincing evidence) or psychological means. Before the introduction of habit reversal psychologists had no real alternatives to offer, and even this method lacks evidence for its efficacy and is not widely used. Illustrated throughout with case study examples and containing detailed guidelines for patient and therapist on the use of CBT, this book provides a comprehensive review of what is known about the occurrence and diagnosis of tics. Kieron O'Connor explores the various theories currently available to explain the causes and progression of these disorders, and discusses the assessment and treatment options available. Finally he takes the most widely accepted psychological therapy - cognitive behaviour therapy - and applies it for the first time to the treatment of tics.

Planetary Nebulae in Our Galaxy and Beyond (IAU S234) International

Astronomical Union. Symposium,2006 Planetary nebulae represent the brief transition between Asymptotic Giant Branch stars and White Dwarfs. As multi-wavelength laboratories they have played a key role in developing our understanding of atomic, molecular, dust and plasma processes in astrophysical environments. The means by which their wonderfully diverse morphologies are obtained is currently the subject of intense research, including hydrodynamical shaping mechanisms and the role of binarity, stellar magnetic fields and rotation. Their contribution to the chemical enrichment of galaxies is another very active research area, as is the ever growing use of their narrow high luminosity emission lines to probe the dynamics and mass distributions of galaxies and the intergalactic media of clusters of galaxies. IAU S234 summarises the current status of research on the properties and processes of planetary nebulae, as reported in reviews and papers by leading experts working in the field.

Cardiovascular Disorders in Hemodialysis Claudio Ronco,Alessandra

Brendolan,Nathan W. Levin,2005-01-01 Hemodialysis therapy has become a well-established form of renal replacement, and due to continuous improvements in technology, a series of new biomaterials and techniques for the clinical routine have been developed. Nevertheless, cardiovascular disorders in hemodialysis and uremia represent one of the most important aspects of modern nephrological care. This publication is therefore dedicated to cardiovascular risk factors, the role of the endothelium, problems related to mineral disorders and finally to the possible impact of new technologies on the final outcome in hemodialysis. Being a state-of-the-art appraisal of today's technology and current issues in hemodialysis with special regard to cardiovascular disorders and risk factors, this book is a synthesis between an educational effort aimed at the newer generations of physicians and nurses in the field of hemodialysis and a state-of-the-art description of the most advanced technologies in this field. At the same time, the lessons learned from large international trials, either already completed or to be completed in the years to come, are presented.

Alternative Models of Addiction Hanna Pickard, Serge H. Ahmed, Bennett Foddy, 2015-12-07 For much of the 20th century, theories of addictive behaviour and motivation were polarized between two models. The first model viewed addiction as a moral failure for which addicts are rightly held responsible and judged accordingly. The second model, in contrast, viewed addiction as a specific brain disease caused by neurobiological adaptations occurring in response to chronic drug or alcohol use, and over which addicts have no choice or control. As our capacity to observe neurobiological phenomena improved, the second model became scientific orthodoxy, increasingly dominating addiction research and informing public understandings of addiction. More recently, however, a dissenting view has emerged within addiction research, based partly on new scientific research and partly on progress in philosophical and psychological understandings of relevant mental phenomena. This view does not revert to treating addiction as a moral failure, but nonetheless holds that addictive behaviour is fundamentally motivated by choice and subject to at least a degree of voluntary control. On this alternative model of addiction, addictive behaviour is an instrumental means to ends that are desired by the individual, although much controversy exists with respect to the rationality or irrationality of these ends, the degree and nature of the voluntary control of addictive behaviour and motivation, the explanation of the difference between addictive and non-addictive behaviour and motivation, and, lastly, the extent to which addictive behaviour and motivation is correctly characterised as pathological or diseased. This research topic includes papers in the traditions of neuroscience, psychology, philosophy, law and social science that explore alternative understandings of addiction.
