Is It Safe? Protecting Your Computer, Your Business, and Yourself Online Michael R. Miller, 2008-06-06 Is It Safe?

PROTECTING YOUR COMPUTER, YOUR BUSINESS, AND YOURSELF ONLINE IDENTITY THEFT. DATA THEFT.

INTERNET FRAUD. ONLINE SURVEILLANCE. EMAIL SCAMS.

Hacks, attacks, and viruses. The Internet is a dangerous place. In years past, you could protect your computer from malicious activity by installing an antivirus program and activating a firewall utility.

Unfortunately, that's no longer good enough; the Internet has become a much darker place, plagued not only by rogue software but also by dangerous criminals and shadowy government agencies. *Is It Safe?*

addresses the new generation of security threat. It presents information about each type of threat and then discusses ways to minimize and recover from those threats. *Is It Safe?* differs from other security books by focusing more on the social aspects of online security than purely the technical aspects. Yes, this book still covers topics such as antivirus programs and spam blockers, but it recognizes that today's online security issues are more behavioral in nature—phishing schemes, email scams, and the like. Are you being scammed? Learn

how to spot the newest and most insidious computer security threats—fraudulent retailers, eBay scammers, online con artists, and the like. Is your identity safe? Avoid being one of the nine million Americans each year who have their identities stolen. Today's real Internet threats aren't viruses and spam. Today's real threat are thieves who steal your identity, rack up thousands on your credit card, open businesses under your name, commit crimes, and forever damage your reputation! Is Big Brother watching? Get the scoop on online tracking and surveillance. We examine just who might be tracking your online activities and why. Is your employer watching you? How to tell when you're being monitored; and how to determine what is acceptable and what isn't. Michael Miller has written more than 80 nonfiction books over the past two decades. His best-selling books include Que's YouTube 4 You, Googlepedia: The Ultimate Google Resource, iPodpedia: The Ultimate iPod and iTunes Resource, and Absolute Beginner's Guide to Computer Basics. He has established a reputation for clearly explaining technical topics to nontechnical readers and for offering useful real-world advice about complicated topics.

Dyscalculia: from Science to Education Brian
Butterworth, 2018-12-07 Dyscalculia is caused by developmental

differences in the structures and patterns of activation in the brain. Affected learners require timely and tailored interventions, informed and shaped by neurological findings. In this ground-breaking text, Professor Butterworth explains the latest research in the science of dyscalculia in a clear non-technical way. Crucially, he shows that dyscalculia is caused by a core deficit in the ability to accurately and swiftly represent the number of objects in a set, an ability that underpins learning arithmetic, and clearly differentiates dyscalculia from other forms of early maths learning difficulties. Butterworth uniquely links research to pedagogical practice, to explain how science can be used for the identification of dyscalculia, and for the development of strategies to best help affected learners acquire arithmetical competence. The text provides robust interventions that focus on helping pupils to strengthen their ability to process numerosities and link them to the familiar number symbols, counting words and digits. It shows that science has clear and specific implications both for assessment and intervention. A landmark publication for the dyscalculia community, *Dyscalculia: From Science to Education* will become an essential resource for teachers, professionals, parents and sufferers, as well as for university courses that include specific learning disabilities.

Human Factors in the Training of Pilots Jefferson M.

Koonce, 2002-05-23 In this educational yet entertaining text, Jeff Koonce draws on his 44 years of pilot experience and 31 years as a professor of psychology and human factors engineering in addressing the questions of how to apply sound human factors principles to the training of pilots and to one's personal flying. The author discusses principles of human f

VLSI for Neural Networks and Artificial Intelligence Jose G.

Delgado-Frias, W.R. Moore, 2013-06-29 Neural network and artificial intelligence algorithms and computing have increased not only in complexity but also in the number of applications. This in turn has posed a tremendous need for a larger computational power that conventional scalar processors may not be able to deliver efficiently. These processors are oriented towards numeric and data manipulations. Due to the neurocomputing requirements (such as non-programming and learning) and the artificial intelligence requirements (such as symbolic manipulation and knowledge representation) a different set of constraints and demands are imposed on the computer architectures/organizations for these applications. Research and development of new computer architectures and VLSI circuits for neural networks and artificial intelligence have been increased in order to meet the new performance requirements. This book presents novel approaches and trends on VLSI implementations of machines for these applications. Papers have been drawn from a number of research communities; the subjects span analog and digital VLSI design, computer design, computer architectures, neurocomputing and artificial intelligence techniques. This book has been organized into four subject areas that cover the two major categories of this book; the areas are: analog circuits for neural networks, digital implementations of neural networks, neural networks on multiprocessor systems and applications, and VLSI machines for artificial intelligence. The topics that are covered in each area are briefly introduced below.

Philosophical Manuscripts David Lewis, 2023-09-28 David Lewis (1941-2001) was a celebrated and influential figure in analytic philosophy. When Lewis died, he left behind a large body of unpublished notes, manuscripts, and letters. This volume contains two

longer manuscripts which Lewis had originally intended to turn into books, and thirty-one shorter items. The longer manuscripts are 'The Paradoxes of Time Travel', his David Gavin Young Lectures at the University of Adelaide, and 'Confirmation Theory', which is based on a graduate course on probability and logic that he gave at UCLA. Lewis's described his purposes in 'The Paradoxes of Time Travel' as being, '(1) to solve a philosophical problem hitherto largely ignored or casually mis-solved by philosophers [...]; (2) to introduce the layman to various topics in metaphysics, since our problem turns out to connect with many more familiar ones; and (3) to show of several of my favorite doctrines and methods in metaphysics'. By contrast, 'Confirmation Theory' is a technical work in which Lewis aimed to present in a unified fashion what he considered to be the best from competing theories of confirmation. Lewis described the work as 'Mathematically self-contained, with proofs for the major theorems; but the mathematics is kept down to hairy high-school algebra'. The thirty-one shorter items cover such topics as causation, freedom of the will, probability, counterparts, reference, logic, value, and divine evil. They are included here both for their intrinsic philosophical interest and their historical value. This volume also contains an intellectual biography of the young David Lewis by the editors.
