Engaging the Line Brandon R. Dimmel,2016-10-15 For decades, people living in communities along the Canada-US border enjoyed close social and economic relationships with their neighbours across the line. The introduction of new security measures during the First World War threatened this way of life by restricting the movement of people and goods across the border. Many Canadians resented the new regulations introduced by their provincial and federal governments, deriding them as “outside influences” that created friction where none had existed before. Engaging the Line examines responses to wartime regulations in six communities and offers a glimpse at the origins of our modern, highly secured border.

Demographic Analysis Roland Pressat,2020-10-11 Population control requires that the birth rate equal to the death rate. If it is too low population will decline; if it is too high, population will increase. If either condition persists long enough the population will diminish towards zero or increase towards infinity. Fortunately, the birth trajectory does not have to be set once and for all, but can be adjusted within limits. Since birth and death rates determine whether we are heading for population extinction or explosion, they are well designated vital statistics. Their understanding and use are a central theme of demographic analysis. Demographic Analysis presents those techniques that are often called for in the study of demographic problems. Such techniques permit researchers to fill the gap between the large amounts of data made available by censuses and the theoretical and practical questions that need to be answered; the techniques of this book effectively bring the data into confrontation with the problems. In his treatment of population projection, Pressat applies methods developed in earlier sections for mortality and fertility. The emphasis is on population projection and accords with its usefulness in demographic analysis. The meaning of a demographic rate or trend is brought out by seeing to what condition it would lead if continued. No assumption is made that the concrete future will follow either path. The substance of the book is devoted to the main themes of mortality and fertility. Underlying these as well as nearly every other kind of data with which the demographer deals is the problem of location in time - the relation of vital events to the calendar, and also to the age of the persons undergoing them. Pressat's detailed attention to this problem forms a solid basis for how current methodology accounts of demographic changes.
