Clinical Skills Program Nancy A.. Mason,Leslie A.. Shimp,1993

Developing Clinical Practice Skills for Pharmacists Kimberly A. Galt,2006 Caring leads to better patient care. Patients and their families become guest lecturers in this compendium of real-life case studies specifically designed to teach all-important clinical skills systematically. *Developing Clinical Practice Skills for Pharmacists* helps student pharmacists gain the insight they need to cultivate informed, compassionate, and effective patient care. Various clinical skills are illustrated through genuine pharmacy practice settings that underscore the essential, patient-centered role of today's pharmacist. This is the first text to teach clinical skills using real life cases. Students gain greater understanding and develop stronger skills to help avert medical errors and foster better outcomes. Answer guides, additional instructional materials, and detailed examples of forms and instruments make this text a valuable tool for establishing effective patient-pharmacist relationships.

Developing Clinical Proficiency in Athletic Training Kenneth L. Knight,Kirk Brumels,2010 *Developing Clinical Proficiency in Athletic Training*, A modular approach, 4th edition, presents a modular approach consisting of three levels and 147 modules that guide students in an athletic training program through educational competencies. It does not teach skills, but rather organizes them into a system for progressive development and assessment. Emphasizing the clinical learning process, experiences, and education, this edition, which was previously titled *Assessing Clinical Proficiencies in Athletic Training*, contains 27 new modules; three new groups of modules on developing clinical skills, the

body, injury and illness pathology, exercise and disease, the body's response to injury, and professional development; and a new module on foundational behaviors of professional practice, added to all three levels. It integrates the 2006 National Athletic Trainers' Association Athletic Training Educational Competencies.

Canadian Clinical Nursing Skills and Techniques E-Book Anne Griffin

Perry, Patricia A. Potter, Wendy Ostendorf, Shelley Cobbett, 2019-05-21 Introducing the only fully comprehensive skills text on the market, distinctly for Canadian students! Canadian Clinical Nursing Skills and Techniques helps equip you with the skills you need to successfully care for patients within the Canadian social and institutional context. Building on the strength of Clinical Nursing Skills & Techniques' comprehensive coverage of over 200 basic, intermediate and advanced skills, this textbook features nearly 1,000 full-colour photographs and drawings, a nursing process framework, step-by-step instructions with rationales, and a focus on critical thinking and evidence-informed practice. Written by the highly respected author team of Anne Griffin Perry, Patricia A. Potter, Wendy Ostendorf, and Canadian author Shelley L. Cobbett, it offers all the guidance and tools you need to perform nursing skills with complete confidence! Comprehensive coverage includes over 200 basic, intermediate, and advanced nursing skills. Streamlined theory content in each chapter features a quick, easy-to-read bullet format to help reduce repetition and emphasize the clinical focus of the book. Unique! Evidence-Informed Nursing Practice chapter covers the entire process of conducting research, including collecting, evaluating, and applying evidence from published research. Unique! Unexpected Outcomes and Related Interventions sections alert you to what might go wrong and how to appropriately

intervene. Clinical Debriefs case-based review questions at the end of each chapter focus on issues such as managing conflict, care prioritization, patient safety, and decision-making to help you better prepare for the clinical setting. Nursing process framework incorporates the areas of delegation and collaboration; reporting and recording; safety guidelines; and teaching, pediatric, geriatric, and home care considerations. Basic skills presented in streamlined procedural guidelines format makes it easy learn and review basic nursing skills. Clinical Decision Points within skills address key safety issues or possible skill modifications for specific patient needs. Rationales for each skill step explain why steps are performed in a specific way, including their clinical significance and benefit, and incorporate the latest research findings. Patient-Centered Care for Pharmacists Kimberly A. Galt, Galt, 2012-02-20 Patient-centered care is at the heart of today's pharmacy practice, and ASHP's Patient-Centered Care for Pharmacists gets to the heart of the subject. Formerly Developing Clinical Practice Skills for Pharmacists, this revised resource has been redeveloped to compliment the changing emphasis in pharmacy practice to patient-centered care and the contemporary context of healthcare delivery. To understand and treat the whole person and learn to use a realistic approach to time and resources, students must connect their drug science knowledge to actual practice. Useful in multiple courses in multiple levels, Patient-Centered Care for Pharmacists is a valuable resource that gives students and teachers alike more for their money. In P1, P2, and P3 courses in areas from clinical skills to communications, students can follow realistic case studies through typical processes to

witness patient centered care in action. Strong, well-developed case studies provide insight into today's vital topics:· Cultural differences among patients· Documentation and health records· Patient care plan development· Effective patient communication· And much more.

Nursing Interventions & Clinical Skills E-Book Anne Griffin Perry, Patricia A. Potter, Wendy Ostendorf, 2019-01-08 Master nursing skills with this guide from the respected Perry, Potter & Ostendorf author team! The concise coverage in Nursing Interventions & Clinical Skills, 7th Edition makes it easy to learn the skills most commonly used in everyday nursing practice. Clear, step-by-step instructions cover more than 160 basic, intermediate, and advanced skills — from measuring body temperature to insertion of a peripheral intravenous device — using evidence-based concepts to improve patient safety and outcomes. A streamlined, visual approach makes the book easy to read, and an

Evolve companion website enhances learning with review questions and handy checklists for each clinical skill. Coverage of more than 160 skills and interventions addresses the basic, intermediate, and advanced skills you'll use every day in practice. Safe Patient Care Alerts highlight risks or other key information to know in performing skills, so you can plan ahead at each step of nursing care. Unique! Using Evidence in Nursing Practice chapter provides the information needed to use evidence-based care to solve clinical problems. Coverage of evidence-based nursing techniques includes the concept of care bundles, structured practices that improve patient safety and outcomes, in addition to the coverage of teach-back. Delegation & Collaboration guidelines help you make decisions in whether to delegate a skill to unlicensed assistive personnel, and indicates what key information must be shared. Teach-Back step shows how to evaluate the success of patient teaching, so you can see whether the patient understands a task or topic or if additional teaching may be needed. Recording guidelines describe what should be reported and documented after performing skills, with Hand-off Reporting sections listing important patient care information to include in the handoff. Special Considerations indicate the additional risks or accommodations you may face when caring for pediatric or geriatric patients, as well as patients in home care settings. A consistent format for nursing skills makes it easier to perform skills, organized by Assessment, Planning, Implementation, and Evaluation. Media resources include skills performance checklists on the Evolve companion website and related lessons, videos, and interactive exercises on Nursing Skills Online. NEW! 2017 Infusion Nurses Society standards are included on administering IVs and on other changes in evidence-based practice. NEW Disaster Preparedness chapter

focuses on caring for patients after biological, chemical, or radiation exposure. NEW! SBAR samples show how to quickly and effectively communicate a patient's condition in terms of Situation, Background, Assessment, and Recommendation. NEW! Practice Reflections sections include a clinical scenario and questions, helping you reflect on clinical and simulation experiences. NEW! Three Master Debriefs help you develop a better understanding of the big picture by synthesizing skill performance with overall patient care.

Core Concepts in Athletic Training and Therapy Susan Kay Hillman, 2012-01-31
Core Concepts in Athletic Training and Therapy provides a balanced introduction to the knowledge, skills, and clinical abilities that span the profession of athletic training. Students in athletic training, coaching, or other health care fields will find current information covering the breadth of theory and application of athletic training, including evidence-based practice, prevention and health promotion, clinical examination and diagnosis, acute and emergency care, therapeutic interventions, and health care administration. It also presents advanced topics of pathophysiology and psychological response to sport injury to better prepare students for continued study. Compared to other introductory athletic training texts, Core Concepts in Athletic Training and Therapy is the only text that aligns with the newest athletic training education competencies from the National Athletic Trainers' Association (2011). Written by a team of respected athletic

training educators with experience at the professional and collegiate levels, the text breaks new ground by condensing key concepts to a comprehensive level while not overwhelming students with content that will be addressed in depth in advanced courses. Numerous features assist students in learning the fundamentals:

- Each of the six parts opens with a discussion of the competencies that are covered in that part and concludes with a reference list of those competencies by description and number, making it easy to monitor the knowledge required.
- A companion web resource contains 41 clinical proficiency exercises, carefully chosen to complement the introductory level of the text and align with required educational objectives. The modules may be completed online or printed, and cross-references at the end of each chapter guide students to the appropriate modules to apply the chapter content.
- Case studies sprinkled throughout the text demonstrate real-world situations and include critical thinking questions that underscore principles of rehabilitation and exercise.
- Full-color photographs depict specific conditions and techniques, giving students an accurate picture of real practice.
- For instructors, a complete set of ancillaries assists in preparing and presenting lectures, leading class discussion, and planning assignments and assessments.

In addition, *Core Concepts in Athletic Training and Therapy* is the first text to offer a complete chapter on evidence-based practice, the newest educational competency required of entry-level athletic trainers by the NATA. The rest of the text introduces general information about life as an athletic trainer, such as training, education, licensure, certification, employment opportunities, and the roles in a sports medicine team. The core of the text then focuses on required knowledge and skills related to injury prevention, injury recognition and

classification (including region-specific examination strategies, basic objective tests, physical exam strategies, and injury mechanisms), acute care, therapeutic interventions, and the role of pharmaceuticals in the healing process. To round out the text, it addresses health care administration and discusses strategies for the management of athletic training programs. With learning features and a web resource that integrate clinical learning into an introductory course, *Core Concepts in Athletic Training and Therapy* is the essential resource for current and future athletic trainers. Long after its first use, it will prove a valuable reference for athletic training students as they progress through the curriculum, prepare for certification, and begin careers in the profession. *Core Concepts in Athletic Training and Therapy* is part of Human Kinetics' Athletic Training Education Series. Featuring the work of respected authorities in athletic training, this collection of outstanding textbooks, each with its own supporting instructional resources, parallels and expounds on the content areas in the accreditation standards of the NATA Education Council.

Nursing Skills Online Version 2.0 for Nursing Interventions + Clinical Skills Anne Griffin Perry, Patricia Ann Potter, Martha Keene Elkin, 2011-04-29 Nursing Skills Online is an interactive and evaluative learning system designed to support Elkin's Nursing Interventions and Clinical Skills 4th edition text. Focusing on the skills that are most labor-intensive to teach and pose the greatest risk to patient safety, this course is the perfect tool to help users review and evaluate their competency before performing skills in the clinical setting. This online course consists of 17 modules organized around the 5-step nursing process. Each module challenges users with a series of realistic, case-based lessons that consist of objectives, a content overview, reading assignments, numerous interactive exercises, and a post-test. Lessons include helpful tables, graphs, charts, illustrations, photographs, animations, audio clips, and videos throughout - all designed to make the learning experience more visual, realistic, and engaging.

The DRCOG Revision Guide Susan Ward, 2014-09-04 The DRCOG Revision Guide has been written by examiners as a must-have guide for anyone preparing for this

examination. The format is closely aligned to the DRCOG syllabus with a chapter covering each one of the seven syllabus sections. The specimen questions can be used to check existing knowledge and ascertain where to concentrate your revision efforts. The guide contains 350 example questions that accurately represent each of the three question types that are featured in the examination. The answers sections contain detailed explanations and some insights from the examiners to help with exam technique. Suggested reading material and references to the sources of information used to set the questions are given throughout. The book ends with a complete mock examination to help you to practise time management and test your overall understanding. If you are preparing to sit the DRCOG examination, this is an essential guide for exam success.

Manual of Simulation in Healthcare Richard H. Riley, 2008 Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide. Simulation and skills centres have become established to integrate simulation into mainstream education in all medical, nursing, and paramedical fields. Borrowing from the experience and methodologies of industries that are using simulation, medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula. This book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation. Simulation has been used to enhance the educational experience in a diverse range of fields; therefore a wide variety of disciplines are represented. The book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing and course development, and

promotion. Section two deals with simulators and related training devices that are required to equip a stand-alone or institution-based centre. The features, strengths, and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements. There is a guide to producing scenarios and medical props that can enhance the training experience. The third section covers adult education and it reviews the steps required to develop courses that comply with 'best practice' in medical education. Teaching skills, facilitating problem-based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education. The manual concludes with guides for the major specialties that use simulation, including military, paediatrics, CPR and medical response teams, obstetrics, and anaesthesia.
