*Correction for Ionospheric Refraction for COBRA DANE* Richard S. Allen, Delia E. Donatelli, Maria C. Picardi, 1977 A hit-to-hit correction for range error arising from ionospheric refraction has been developed for the COBRA DANE radar. First a FORTRAN procedure was developed to compute monthly median refraction corrections over the field of view. These were provided to the radar in the form of equivalent look-up tables. A FORTRAN program was developed for the radar computed index values for each target position (azimuth, elevation, and range) and a correction was determined for each radar hit. This procedure removed about 75 percent of the monthly mean ionospheric effect. A further reduction was then made by using first and update factor determined by the Air Force Global Weather Central and then a more accurate update derived from a two-frequency calibration made by the radar itself. These procedures are shown to be capable of removing up to 90 percent of the mean ionospheric effect.

**Cobra Dane** John T. Campbell, 2013-09 Russian sleeper agents

left over from the Cold War take over an Alaskan radar station when they think a strategic nuclear attack from Russia has been launched at the United States. Frank Trask, an engineer at the site, and Ellen Gain, a covert CIA agent, race to stop the Russian agents while trying to survive the extreme elements on the Aleutian Island of Shemya. The two hook up with two other survivors of the Russian agents' vicious attack on the island personnel. Elverson, a security guard, and Vaughan, a personnel employee, join Trask and Gain in trying to figure out why their island has been taken over by hostile forces. Trask struggles with inner demons, his excessive drinking and is haunted by his past as a sniper in Vietnam. He comes to the sudden conclusion that one of their group is a traitor, waiting to betray them at any time. Meanwhile U.S. Marines are sent to Shemya when communications are broken between the island and NORAD. A U.S. attack submarine is also sent into the area and tracks a Russian submarine whose intent is unknown. The Russian sub deploys a Spetsnaz team onto the island. All these forces converge for one final battle at the top of the world.

Helicopters Stanley S. McGowen, 2005-05-24 First envisioned by Leonardo da Vinci and first deployed in World War II, the helicopter is now a universal icon of modern warfare, a key component of combat planning around the world, and one of the military's most versatile and effective tools. *Helicopters: An Illustrated History of Their Impact* covers the development of helicopters from a concept in Leonardo da Vinci's mind to the first successful machines in the early 1900s to the latest tilt-rotor designs. Time and again, in a story of constant innovation, designers answered the concerns of military planners with more maneuverable, more capable rotorcraft. With expert analysis and specific details of every significant model ever used, *Helicopters* shows how these once denigrated machines became essential to a variety of missions (reconnaissance, transport, attack, support, evacuation, urban combat, quick strikes behind enemy lines, and more). In addition, the book looks at the impact of rotorcraft beyond the military, including their ever-widening role in emergency medical care, police work, traffic control, agriculture, news reporting, and more.

*Computational Ballistics III* C. A. Brebbia, Alexandre de Assis Motta, 2007 Containing the proceedings of the Third International Conference on Computational Ballistics, this book presents new ideas and advanced developments in the field of study of Computational Ballistics. Ballistic studies include applications as varied as the study of the structural and control behavior of rockets and communication satellites; bird strike effects on commercial aircraft, terrorist attacks and automobile crash worthiness modelling. Many basic problems of ballistics are similar to those in other fields of applications, such as combustion, heat conduction, in-flight structural behaviour, trajectory related issues, contact, impact, penetration, structural response to shock waves and many others. A valuable contribution to its field, this text will be of interest to researchers involved in the different areas of computational ballistics and their relationship between computational methods and experiments. Notable topics include: Systems and Technology; Combustion and Heat Transfer; Propellants; Fluid Dynamics; Fluid Flow and Aerodynamics; In-Flight Structural Behaviour and Material Response; Guidance and Control; Perforation and Penetration Mechanics; Fluid-structure Interaction; Experimental Mechanics/ballistic and Field Testing; High Rate Loads; Composite Material; Shock and Impact.
