LTE Security Dan Forsberg,Günther Horn,Wolf-Dietrich Moeller,Valtteri Niemi,2012-11-05 A concise, updated guide to the 3GPP LTE SecurityStandardization specifications A welcome Revised Edition of the successful LTE Securityaddressing the security architecture for SAE/LTE, which is based onelements of the security architectures for GSM and 3G, but whichneeded a major redesign due to the significantly increasedcomplexity, and different architectural and business requirementsof fourth generation systems. The authors explain in detailthe security mechanisms employed to meet these requirements.

These specifications generated by standardization bodies only inform about how to implement the system (and this only to the extent required for interoperability), but almost never inform readers about why things are done the way they are. Furthermore, specifications tend to be readable only for a small group of experts and lack the context of the broader picture. The book fills this gap by providing first hand information from insiders who participated in decisively shaping SAE/LTE security in the relevant standardization body, 3GPP, and can therefore explain the rationale for design decisions in this area. A concise, fully updated guide to the 3GPP LTE Security Standardization specifications Describes the essential elements of LTE and SAE Security, written by leading experts who participated in decisively shaping SAE/LTE security in the relevant standardization body, 3GPP Explains the rationale behind the standards specifications giving readers a broader understanding of the context to these specifications Includes new chapters covering 3GPP work on system enhancements for MTC, plus application layer security in ETSI TC M2M and embedded smart card in ETSI SCP; Security for Machine-type Communication, Relay Node Security, and Future Challenges, including Voice over LTE, MTC, Home base stations, LIPA/SIPTO, and New Cryptographic Algorithms Essential reading for System engineers, developers and people in technical sales working in the area of LTE and LTE security, communication engineers and software developers in mobile communication field.
