Colour Films in Britain Sarah Street, 2019-07-25 How did the coming of colour change the British film industry? Unlike sound, the arrival of colour did not revolutionise the industry overnight. For British film-makers and enthusiasts, colour was a controversial topic. While it was greeted by some as an exciting development – with scope for developing a uniquely British aesthetic – others were deeply concerned. How would audiences accustomed to seeing black-and-white films – which were commonly regarded as being superior to their garish colour counterparts – react? Yet despite this initial trepidation, colour captivated many British inventors and film-makers. Using different colour processes, these innovators produced films that demonstrated remarkable experimentation and quality. Sarah Street's illuminating study is the first to trace the history of colour in British cinema, and analyses the use of colour in a range of films, both fiction and non-fiction, including *The Open Road*, *The Glorious Adventure*, *This is Colour*, *Blithe Spirit*, *This Happy Breed*, *Black Narcissus*, *The Red Shoes*, *The Tales of Hoffmann* and *Moulin Rouge*. Beautifully illustrated with full colour film stills, this important study provides fascinating insights into the complex process whereby the challenges and opportunities of new technologies are negotiated within creative practice. The book also includes a Technical Appendix by Simon Brown (Kingston University, UK), which provides further details of the range of colour processes used by British film-makers.

Color Language and Color Categorization Jonathan Brindle, Geda Paulsen, Mari Uusküla, 2016-08-17 This volume represents a unique collection of chapters on the way in which color is categorized and named in a number of languages. Although color research has been a topic of focus for researchers for decades, the contributions here show that many aspects of color language and categorization are as yet unexplored, and that current theories and methodologies which investigate color language are still evolving. Some core questions addressed here include: How is color conceptualized through language? What kind of linguistic tools do languages use to describe color? Which factors tend to bias color language? What methodologies could be used to understand human color categorization and language better? How do color vocabularies evolve? How does context impact the color cognition? The chapters collected here adopt different theoretical and methodological approaches in describing new empirical research on how the concept of color is represented in a variety of different languages. Researchers in linguistics, psychology, and cognitive science present a set of new explorations and challenges in the area of color language. The book promotes several methodological and disciplinary dimensions to color studies. The color category is given an in-depth and broad-based examination, so a reader interested in color conceptualization for itself will be able to form a solid vision of the subject.

Women of Color and the Multicultural Curriculum Liza Fiol-Matta, Mariam Chamberlain, 1994 A A A The product of 13 curriculum projects that involved several hundred educators nationwide, this volume provides faculty and administrators with a guide to multicultural curricular change-especially with respect to women. While women represent over half of the college students on campus, they are still represented only minimally in the allegedly mainstream curriculum. Women of color are far less visible in the curriculum than white women. A A A Both the process and the results of a Ford Foundation funded project are presented here in a format that allows browsing and promotes reading straight through. The volume is divided into three major sections, the first of which highlights the actual process of faculty transformation and administrative support essential to curricular changes as it occurred on two of the participating campuses, U.C.L.A. and George Washington University. Extensive multidisciplinary faculty development syllabi are provided. A A A Section Two contains 37 transformed undergraduate course syllabi for courses in sociology, American history and literature, and more, with brief essays describing professors' encounters with teaching the new texts. Section Three is an invaluable interdisciplinary guide to teaching about Puerto Rican women, prepared by a team of scholars at SUNY, Albany. It provided information about Puerto Rican women inside and outside Puerto Rico, as well as teaching strategies for integrating such information into the traditional curriculum. A A A This volume shows that essential educational change-to meet the diversity of U.S. students-may be somewhat slower than one would wish, and more difficult, but it is complex, challenging, and intellectually exciting.

The Classical Hollywood Reader Steve Neale, 2012-11-12 The Classical Hollywood Reader brings together essential readings to provide a history of Hollywood from the 1910s to the mid 1960s. Following on from a Prologue that discusses the aesthetic characteristics of Classical Hollywood films, Part 1 covers the period between the 1910s and the mid-to-late 1920s. It deals with the advent of feature-length films in the US and the growing national and international dominance of the companies responsible for their production, distribution and exhibition. In doing so, it also deals with film making practices, aspects of style, the changing roles played by women in an increasingly business-oriented environment, and the different audiences in the US for which Hollywood sought to cater. Part 2 covers the period between the coming of sound in the mid 1920s and the beginnings of the demise of the `studio system` in late 1940s. In doing so it deals with the impact of sound on films and film production in the US and Europe, the subsequent impact of the Depression and World War II on the industry and its audiences, the growth of unions, and the roles played by production managers and film stars at the height of the studio era. Part 3 deals with aspects of style, censorship, technology, and film production. It

includes articles on the Production Code, music and sound, cinematography, and the often neglected topic of animation. Part 4 covers the period between 1946 and 1966. It deals with the demise of the studio system and the advent of independent production. In an era of demographic and social change, it looks at the growth of drive-in theatres, the impact of television, the advent of new technologies, the increasing importance of international markets, the Hollywood blacklist, the rise in art house imports and in overseas production, and the eventual demise of the Production Code. Designed especially for courses on Hollywood Cinema, the Reader includes a number of newly researched and written chapters and a series of introductions to each of its parts. It concludes with an epilogue, a list of resources for further research, and an extensive bibliography.

Harnessing the Technicolor Rainbow Scott Higgins, 2009-02-17 Like Dorothy waking up over the rainbow in the Land of Oz, Hollywood discovered a vivid new world of color in the 1930s. The introduction of three-color Technicolor technology in 1932 gave filmmakers a powerful tool with which to guide viewers' attention, punctuate turning points, and express emotional subtext. Although many producers and filmmakers initially resisted the use of color, Technicolor designers, led by the legendary Natalie Kalmus, developed an aesthetic that complemented the classical Hollywood filmmaking style while still offering innovative novelty. By the end of the 1930s, color in film was thoroughly harnessed to narrative, and it became elegantly expressive without threatening the coherence of the film's imaginary world. *Harnessing the Technicolor Rainbow* is the first scholarly history of Technicolor aesthetics and technology, as well as a thoroughgoing analysis of how color works in film. Scott Higgins draws on extensive primary research and close analysis of well-known movies, including *Becky Sharp*, *A Star Is Born*, *Adventures of Robin Hood*, and *Gone with the Wind*, to show how the Technicolor films of the 1930s forged enduring conventions for handling color in popular cinema. He argues that filmmakers and designers rapidly worked through a series of stylistic modes based on the demonstration, restraint, and integration of color—and shows how the color conventions developed in the 1930s have continued to influence filmmaking to the present day. Higgins also formulates a new vocabulary and a method of analysis for capturing the often-elusive functions and effects of color that, in turn, open new avenues for the study of film form and lay a foundation for new work on color in cinema.

Color Ordered Rolf G. Kuehni, Andreas Schwarz, 2008-01-09 Since antiquity, people have searched for a way to understand the colors we see—what they are, how many there are, and how they can be systematically identified and arranged in some kind of order. How to order colors is not merely a philosophical question, it also has many practical applications in art, design, and commerce. Our intense interest in color and its myriad practical applications have led people throughout history to develop many systems to characterize and order it. The number of color order systems developed throughout history is unknown but ranges in the hundreds. Many are no longer used, but continue to be of historical interest. Despite wrong turns and slow progress, our understanding of color and its order has improved steadily. Although full understanding continues to elude us, it seems clear that it will ultimately come from research in neurobiology, perception and consciousness. *Color Ordered* is a comprehensive, in-depth compendium of over 170 systems, dating from antiquity to the present. In it, Rolf Kuehni and Andreas Schwarz present a history and categorization of color systems, describe each one using original figures and schematic drawings, and provide a broad review of the underlying theory. Included are a brief overview of color vision and a synthesis of the various systems. This volume is a unique and valuable resource for researchers in color vision, and visual perception, as well as for neuroscientists, art historians, artists, and designers.
