Praxis Manned Spaceflight Log 1961-2006 Tim Furniss,Shayler David,Michael D.

Shayler,2007-08-17 This flagship work charts a complete chronological log of orbital manned spaceflight. Included are the X-15 astroflights of the 1960s, and the two 1961 Mercury and Redstone missions which were non-orbital. There is an image depicting each manned spaceflight, and data boxes containing brief biographies of all the space travelers. The main text is a narrative of each mission, its highlights and accomplishments, including the strange facts and humorous stories connected to every mission. The resulting book is a handy reference to all manned spaceflights, the names of astronauts and cosmonauts who flew on each mission, their roles and accomplishments.

Quest for Space: The Indian Connect ,2014-02-15 Human endeavours in space over the past six decades have reached a stage that just about every facet of human life today has some complement of space capability contributing to it, encompassing the entire spectrum from telecommunications, navigation, weather forecasting, remote sensing, broadcasting and disaster management. Space exploration actually owes its origins to matters military, with civil applications coming about as a by-product. Capability building in space thereafter has witnessed frenzied progress, in the spheres of both the military and the civil/commercial. With an ever increasing number of countries joining the space bandwagon, space is getting congested and competitive. International legislation on space, though well meaning, is largely viewed to be inadequate to address the concerns of equitable access to space and more alarmingly, is reticent on the issue of militarisation and weaponisation. The Indian presence in the global space order is rather significant. Ranking sixth globally in terms of space budget and technological capability, India is capable of going beyond its calling. Its multi-dimensional space programme spans almost the entire spectrum from space launch to satellite construction and their employment in a large array of development-centric applications, and in recent years, in missions beyond the Earth. The Mangalyaan mission to Mars currently underway symbolises India's indigenous technological prowess and is a harbinger of its capability of cementing its status as a responsible space player at the global level. India, thus, stands today, technologically robust and self-reliant - well poised in the global space order to look beyond its domestic charter and address the concerns of the international global community. Space legislation, situational awareness and international cooperation in space security are some of the geostrategic options analysed in this book, which could facilitate Indian positioning in the global space order.

Automatic Detection of Irony Jihen Karoui,Farah Benamara,Veronique Moriceau,2019-11-05 In recent years, there has been a proliferation of opinion-heavy texts on the Web: opinions of Internet users, comments on social networks, etc. Automating the synthesis of opinions has become crucial to gaining an overview on a given topic. Current automatic systems perform well on classifying the subjective or objective character of a document. However, classifications obtained from polarity analysis remain inconclusive, due to the algorithms' inability to understand the subtleties of human language. Automatic Detection of Irony presents, in three stages, a supervised learning approach to predicting whether a tweet is ironic or not. The book begins by analyzing some everyday examples of irony and presenting a reference corpus. It then develops an automatic irony detection model for French tweets that exploits semantic traits and extralinguistic context. Finally, it presents a study of portability in a multilingual framework (Italian, English, Arabic).

Introduction of Oculus Quest2 for the first VR users Martin J.,2020-12-28 When I first encountered VR (Virtual Reality) devices as a device called Quest 2 from a company called Oculus, I wondered is there a way to make it easier for anyone to use this device? I thought about it, and through this book, I shared what I had experienced. At first, how to use, what accessories are needed, what game to start with, and additional information were included. Therefore, I integrated what I learned from trial and error and summarized what the user are needed throughout this book.

Learning to Solve Problems with Technology David H. Jonassen, 2003 Rather than focus on technology as a tool to teach with, this book stresses that technology-video, hypermedia, the Internet, etc.-is an excellent tool to learn with. The emphasis is on learning to solve problems. By concentrating on problem solving with several specific media, the authors show how a variety of technologies can be used to engage students in personally and socially constructed meaning. They address the Internet, and how it can be used to foster community building; video, and how naturally students take to being behind the camera; and multimedia, as a new form of interactive literacy. The Internet material also includes a section on creating a personal or group website, plus coverage of cybermentoring. For teachers in computer classes and media centers-of students at all grade levels.
