Future Tech Trond Arne Undheim,2021-03-03 Amazon's Fire phone. Google Glass. Facebook Home. Quikster. New technologies alone don't always cause industry changes. Future Tech explains how the four forces of technology, policy, business models and social dynamics work together to create industry disruption and how this understanding can help to predict what is coming next. Technology is generally viewed as the single force that disrupts markets. However, history is rife with stories of technologies that have failed to meet such hyped expectations. In Future Tech, the author reveals that true change only results from combining the forces of science and technology, policy and regulation, new business models (i.e. sharing economy) and social dynamics (whether or not people adopt it). Whether these four forces align explains why some technologies, such as AI, blockchain, robotics, synthetic biology and 3D printing, stick and why others fail. With an understanding of these four forces, business executives and policymakers can explain what technology is likely to stick and even anticipate what is coming next. By 2030, the global labor force will be led by an elite set of knowledge workers enabled by robotic AI. To help individuals thrive in this workplace, Future Tech advises readers to develop their human capabilities of creativity and adaptation, develop deep expertise in one domain while being well-versed in dozens more, and develop a personalized approach to acquiring and processing information and deliberating decisions.

It explores the evolving contested material under "green infrastructure" covering timber, concrete, soil, and pavement. It discusses the resistance to the ambiguity of managing the construction of green infrastructure and drawing on wider debates around applications and processes on construction. These contributions are by no means definitive, but rather an attempt to provide a detached and holistic perspective on the engineering "green infrastructure" concept.

The Militarization and Weaponization of Space Matthew Mowthorpe,2004 The militarization of space began as a rivalry between the United States and the Soviet Union and grew to enormous proportions during the height of the Cold War. Satellite reconnaissance, navigation and weapons guidance, and electronic intelligence comprise only a few of the efforts taken to militarize and dominate space. Today as the prominence of information technology, computing, and telecommunications advances, so does the concept of space as a battlefield. In The Militarization and Weaponization of Space, Matthew Mowthorpe diligently analyzes the military space policies of the United States, the Soviet Union/Russia, and the People's Republic of China from the Cold War period to the present day. Mowthorpe focuses on the development of the ballistic missile defense and other anti-satellite systems and aptly assesses to what degree space will become armed. This work cogently addresses an issue of increasing urgency to scholars of international politics.
