On the Move to Meaningful Internet Systems: OTM 2009 Workshops Robert Meersman, Pilar Herrero, Tharam Dillon, 2009-10-26 Internet-based information systems, the second covering the large-scale integration of heterogeneous computing systems and data resources with the aim of providing a global computing space. Each of these four conferences encourages researchers to treat their respective topics within a framework that incorporates jointly (a) theory, (b) conceptual design and development, and (c) applications, in particular case studies and industrial solutions. Following and expanding the model created in 2003, we again solicited and selected quality workshop proposals to complement the more “archival” nature of the main conferences with research results in a number of selected and more “avant-garde” areas related to the general topic of Web-based distributed computing. For instance, the so-called Semantic Web has given rise to several novel research areas combining linguistics, information systems technology, and artificial intelligence, such as the modeling of (legal) regulatory systems and the ubiquitous nature of their usage. We were glad to see that ten of our earlier s-

cessful workshops (ADI, CAMS, EI2N, SWWS, ORM, OnToContent, MONET, SEMELS, COMBEK, IWSSA) re-appeared in 2008 with a second, third or even 4th edition, sometimes by alliance with other newly emerging workshops, and that no fewer than three brand-new independent workshops could be selected from proposals and hosted: ISDE, ODIS and Beyond SAWSDL. Workshop - diences productively mingled with each other and with those of the main c- ferences, and there was considerable overlap in authors.

Information Technology and Traditional Legal Concepts Richard Jones, Roksana Moore, 2013-10-18 Information technology has served to revolutionise the use, exchange, and protection of information. The growth of the internet, the convergence of technologies as well as the development of user generated and social networking sites has meant that significant amounts of person data as well as copyrighted materials are now readily accessible. Within this changing cultural landscape the legal concepts of privacy, data protection, intellectual property and criminality have necessarily had to develop and adapt. In this volume a number of international scholars consider this process and whether it has merely been a question of the law adapting to technology or whether technology has been forced to adapt to law. Technologies have wrought a culture shift it is therefore apposite to ask whether legal concepts, as reflections of culture, should also change. It is in this volume where papers on privacy data protection, intellectual protection and cyber crime begin address this question. This book was published as a special issue of International review of Law Computers and Technology.
