The National Toxicology Program's Chemical Database Lawrence H. Keith,Douglas B. Walters,1991-12-31 This database provides a vast amount of information about potentially toxic chemicals to regulatory and research agencies, consultants, academics, and libraries. The National Toxicology Program's Chemical Database consists of eight volumes containing 50 fields that present detailed information on 2,270 different chemicals. The data is obtained from the literature or experimentally determined. Each compound is listed in every volume even when there is no information available for it in some volumes. Information in the NTP database was gathered and updated as compounds were used throughout a 12 year period from 1979 to 1991. Throughout the eight volumes, the primary chemical name and the Chemical Abstracts Service Registry Number (CAS No.) remain constant and all 2,270 chemicals are listed alphabetically in each volume. The NTP database can be sold as a set or individually. Each volume consists of one 3-1/2 and two 5-1/4 diskettes , in addition to a 64 page manual that describes how to use the software. Diskettes will run on IBM® or IBM-compatible equipment with DOS 2.0 and higher, 640K internal memory (RAM), and a hard drive with at least 2-17MB of available disk space. Use the eight volumes together to get the full benefit of the NTP Chemical Repository Database, or select only those volumes that contain the information you need and use them as stand-alone databases. Each volume consists of one 3-1/2 and two 5-1/4 diskettes, that will run on IBM or IBM-compatible hardware!

Patterns of Change in Earth Evolution H.D. Holland,A.F. Trendall,2012-12-06 3 of the experience of the last few generations. The group of happily unexperienced events includes large bolide impacts with the Earth. The evidence for the occurrence of such impacts at intervals of some tens of millions of years is quite convincing, and Lyell stands admonished by Hamlet: There are more things in heaven and earth, Horatio, than are dreamt of in your philosophy. The role of bolide impacts on the history of life during other portions of the Phanerozoic Eon is less clear (see Raup and Fischer, both this volume), and catastrophic changes unrelated to extraterrestrial processes may have been important (see Holser, this volume). Changes in the later Precambrian biota are still difficult to interpret, in part because the preservation of soft-bodied animals from this period of Earth history is so unusual (see Seilacher, this volume). During the past billion years or so, bolide impacts have exerted a significant effect on the Earth's surface and its inhabitants, but not on its interior. The 3800 Ma rocks at Isua in West Greenland are the oldest terrestrial rocks that are currently available for inspection (see Dymek, this volume). They contain abundant evidence for the operation of chemical and physical processes that are similar to those of the present day. This situation could not have prevailed during the entire 700 Ma preceding the formation of the Isua rocks.

Touched Bodies Mara Polgovsky Ezcurra,2019-06-21 Shortlisted for the 2020 Association for the Study of the Arts of the Present Book Prize Winner of the 2019 Art Journal Prize from the College Art Association What is the role of pleasure and pain in the politics of art? In *Touched Bodies*, Mara Polgovsky Ezcurra approaches this question as she examines the flourishing of live and intermedial performance in Latin America during times of authoritarianism and its significance during transitions to democracy. Based on original documents and innovative readings, her book brings politics and ethics to the discussion of artistic developments during the “long 1980s”. She describes the rise of performance art in the context of feminism, HIV-activism, and human right movements, taking a close look at the work of Diamela Eltit and Raúl Zurita from Chile, León Ferrari and Liliana Maresca from Argentina, and Marcos Kurtycz, the No Grupo art collective, and Proceso Pentágono from Mexico. The comparative study of the work of these artists attests to a performative turn in Latin American art during the 1980s that, like photography and film before, recast the artistic field as a whole, changing the ways in which we perceive art and understand its role in society.

After Adoption Janette Logan,Carole Smith,2013-01-11 Few children nowadays are placed for adoption with no form of contact planned with birth relatives and it has become common professional practice to advocate direct rather than indirect contact. Practice has outstripped evidence in this respect and not enough is known about how contact arrangements actually work out, particularly for older children adopted from state care. Such children have often experienced neglect, and sometimes abuse, and have frequently been adopted without parental agreement. Based on research with a large number of adoptive parents, children and birth relatives, *After Adoption* considers the impact of direct post-adoption contact on all concerned in such cases. It also: · discusses the development of adoption policy and law, particularly with regard to the legal and social consequences · reviews the research evidence on adopted children's contact with their birth families · explores through interviews: participants' feelings about adoption and direct contact; their relationships with each other; what hinders and what helps. *After Adoption* challenges readers to re-think the relationship between adoption and the possibility of direct post-adoption contact and at the same time provides a comprehensive understanding of adoption issues. It is a timely and valuable addition to the literature on adoption, making a substantial contribution to policy and practice.

The Internationalisation of British Start-up Companies in High-Technology Industries Oliver Bürgel,2012-12-06 The present study analyses the international activities of British start-up companies in high-technology industries. The research makes the following contributions. First, it is the first study that establishes the prevalence of internationally operating start-up companies in a particular country. Accordingly, we find that the majority of British high-tech start-ups have engaged in international activities within a few years since formation. Second, it consolidates the existing knowledge in the fields of international entrepreneurship and subjects it to empirical testing. Third, it assesses the power of different theories in international business to explain the cross-border activities of start-up companies. Overall, the research lends support to a resource-based perspective of international entrepreneurship since the proxies for transaction cost-based arguments and the internationalisation process theory are of limited explanatory power.
