This book explains basic physiologic and pathophysiologic mechanisms of cardiovascular disease in a straightforward manner, gives guidelines as to when referral is appropriate, and, uniquely, explains what the specialist is likely to do. It is ideal for any hospital doctor, generalist, or even senior medical student who may need a cardiology opinion, or for that ma.

Muscular Contraction Robert Malcolm Simmons,1992-06-26 Composed of a set of chapters contributed by past and present collaborators of the Nobel laureate Sir Andrew Huxley, this book covers the areas of muscle research to which Huxley made major contributions. The purpose of the book is to discuss the way that muscles work, asking questions at a fundamental level about the molecular basis of muscle tone production and muscle contraction. The majority of the chapters are concerned with muscle physiology and the relation between structure and function. The process of activation of muscles is discussed, along with the mechanism of contraction itself. Although most of the book deals with vertebrate skeletal muscle, several chapters cover cardiac muscle. Also featured are two chapters discussing Sir Andrew's achievements in both nerve and muscle physiology.

The Era of Uncertainty Francois Trahan,Katherine Krantz,2011-07-13 Macroeconomic Investment Strategies for an Era of Economic Uncertainty “Over the years, François’ insightful analyses of the business cycle has led to market calls that have both benefitted investors on the upside and (more important to many) protected them from losses on the downside. François’ incredible track record in successfully interpreting the trends that can be found in leading indicators and other macroeconomic data have also led to his well deserved reputation as an expert in sector rotation - providing investors on both the long and short side of the market opportunities to profit from his ideas. In my opinion, his most important and influential macro prediction to date was his call in the middle of the last decade when he predicted that the worst housing crisis in American history would soon be upon us, and that it would have far-ranging implications for both the global economy and world financial markets.”
