**Contractor's Guide to QuickBooks Pro 2002** Karen Mitchell,Craig Savage,Jim Erwin,2002 According to a recent national survey, more construction contractors use QuickBooks Pro and QuickBooks than all other accounting programs combined. And for good reason. QuickBooks Pro excels at all the routine paperwork in a construction office: writing checks, keeping track of your bank balance, sending out invoices and statements, creating up-to-the-minute profit and loss statements for the month, year or by job, writing payroll checks, paying suppliers and subcontractors, tracking job costs, comparing estimated and actual costs for each job, and much more. But there's a lot to learn in QuickBooks Pro. And converting to a new accounting system can be a complex and confusing task, even if you have a strong background in accounting and plenty of time to install the new system. That's why this book was written -- because most construction pros aren't accounting experts and have more important work to do at the job site.

Construction Business Management Nick B. Ganaway,2006 Most construction contractors start small with ambitious plans for growth - but half will fail before they are five years old. The most skilled project managers and craftsmen still need the knowledge and experience in running a business to succeed. This book offers the opportunity to stack the odds in your favour. It is based on the things I've learned, used, and refined as a commercial contractor while starting up and operating my own construction firm for 25 years. My book spreads these tools out on the table and the reasoning behind them, makes suggestions for their use, and offers a proven business philosophy--knowledge a contractor can set in place from day one to put his construction business on a level playing field with the best-run companies. What's written here is born of missteps as well as best steps, and both are instructive in building a business that is profitable, enjoyable, and enduring. I've put in one place as much as possible of what I learned the hard way so that you can profit from my experience. \* Learn what you need to succeed in the construction sector \* How to target, land and retain profitable customers \* Avoid the pitfalls of running your own construction business

**Successful RFPs in Construction** Richard Fria, 2005-03-18 Publisher's Note: Products purchased from Third Party sellers are not guaranteed by the publisher for quality, authenticity, or access to any online entitlements included with the product. Managing the RFP process is a key ingredient for any successful construction project, yet few professionals know how to take full advantage of an RFP's potential. This step-by-step guide is a roadmap for an efficient RFP process that will result in time- and cost-savings, optimal team collaboration, and the best possible quality in construction. The negotiated contract method for RFPs is a rapidly growing trend in construction. Traditionally, RFPs have gone through a competitive bid method - meaning that 100% of the design work is done without the input of contractors and with very little real cost information. With the negotiated contract method, only about 10% of the design work is done before a contractor is brought to the table, which means less paperwork and lower up-front costs. There are several advantages to the negotiated contract method: • Because only a small part of the design work is done up-front (before a contractor is brought on board), no extensive re-design work has to be done when budget/schedule issues with the design become a factor. • A complete team - architect/designer and contractor - is assembled earlier, making for a much more efficient process and outcome. • The RFP process becomes a collaborative effort, rather than a competitive one. There is no other book on the shelf that either focuses specifically on RFPs in the construction industry, or features a step-by-step method for implementing the negotiated contract method. This is a step-by-step guide for managing the RFP process in a way that saves time, money, enhances team collaboration, and assures quality in construction. Focusing on the negotiated contract method (as opposed to the competitive bid method), the book takes readers from articulating the needs/wish list for a construction project, to the analysis of responses and interviews, through negotiations and finalization of the deal. This is a roadmap for: • Preparing, understanding, and assessing the quality of information in an RFP. • Gathering critical, project-specific information from free and up-to-date local databases. • Adding value to the process by assisting consultants in marketing and project management capabilities. • Selecting and working with a team early in the process to stay on-schedule and on-budget. • Improving the materials selection process and the end-result overall quality of construction. • Example and template forms make it easy to create a successful RFP process.
