Michael Miller

*Beginning Google Maps Applications with PHP and Ajax* Jeffrey Sambells, Michael Purvis, Cameron Turner, 2007-12-22  
The Google Maps API remains one of the showcase examples of the Web 2.0 development paradigm. In fact, interest in the Google service is so strong that it arguably sparked the mashup phenomenon. This is the first book to comprehensively introduce the service from a developer perspective, showing readers how they can integrate mapping features into their Web applications. Proceeding far beyond creating a simplistic map display, readers are shown how to draw upon a variety of data sources such as geocode.us and the U.S. Census Bureau's TIGER/Line data to build comprehensive geocoding services for mapping any location in North America.

**Using Google Maps and Google Earth, Enhanced Edition** Michael Miller, 2011-01-07 This is the eBook version of the printed book. Using Google™ Maps and Google Earth is more than just a book: it's the fastest, easiest way to master Google's amazing mapping applications! Don't just "read" about it: see it, hear it, live it, with step-by-step screencasts and expert audio tips. Discover how to map your favorite places with Google Maps...see actual locations with Street View...generate driving, walking, and public transit directions...find and learn more about businesses...create and share custom maps and mashups...use Google Maps on iPhone...navigate Google Earth to find locations fast...create life-like Google Earth roadmaps, and tour your route...even explore Google Sky, Google Moon, and Google Earth's Flight Simulator! Exclusive online Show Me video walks through tasks you've just got to see...Tell Me More audio delivers practical, "straight from the experts" insights...Point-Counterpoint audio compares alternative solutions—so you can pick the one that's best for you. It's all the help you'll ever need...where you want it, when you want it!

**The Map Reader** Martin Dodge, Rob Kitchin, Chris Perkins, 2011-05-09 WINNER OF THE CANTEMIR PRIZE 2012 awarded by the Berendel Foundation The Map Reader brings together, for the first time, classic and hard-to-find articles on mapping. This book provides a wide-ranging and coherent edited compendium of key scholarly writing about the changing nature of cartography over the last half century. The editorial selection of fifty-four theoretical and thought provoking texts demonstrates how cartography works as a powerful representational form and explores how different mapping practices have been conceptualised in particular scholarly contexts. Themes covered include paradigms, politics, people, aesthetics and technology. Original interpretative essays set the literature into intellectual context within these themes. Excerpts are drawn from leading scholars and researchers in a range of cognate fields including: Cartography, Geography, Anthropology, Architecture, Engineering, Computer Science and Graphic Design. The Map Reader provides a new unique single source reference to the essential literature in the cartographic field: more than fifty specially edited excerpts from key, classic articles and monographs critical introductions by experienced experts in the field focused coverage of key mapping practices, techniques and ideas a valuable resource suited to a broad spectrum of researchers and students working in cartography and GIScience, geography, the social sciences, media studies, and visual arts full page colour illustrations of significant maps as provocative visual 'think-pieces' fully indexed, clearly structured and accessible ways into a fast changing

field of cartographic research

The Routledge Handbook of Mapping and Cartography Alexander J. Kent, Peter Vujakovic, 2017-10-04 This new Handbook unites cartographic theory and praxis with the principles of cartographic design and their application. It offers a critical appraisal of the current state of the art, science, and technology of map-making in a convenient and well-illustrated guide that will appeal to an international and multi-disciplinary audience. No single-volume work in the field is comparable in terms of its accessibility, currency, and scope. The Routledge Handbook of Mapping and Cartography draws on the wealth of new scholarship and practice in this emerging field, from the latest conceptual developments in mapping and advances in map-making technology to reflections on the role of maps in society. It brings together 43 engaging chapters on a diverse range of topics, including the history of cartography, map use and user issues, cartographic design, remote sensing, volunteered geographic information (VGI), and map art. The title's expert contributions are drawn from an international base of influential academics and leading practitioners, with a view to informing theoretical development and best practice. This new volume will provide the reader with an exceptionally wide-ranging introduction to mapping and cartography and aim to inspire further engagement within this dynamic and exciting field. The Routledge Handbook of Mapping and Cartography offers a unique reference point that will be of great interest and practical use to all map-makers and students of geographic information science, geography, cultural studies, and a range of related disciplines.

*Ambient Intelligence* Boris De Ruyter, Achilles Kameas, Periklis Chatzimisios, Irene Mavrommati, 2015-10-31 This book constitutes the refereed proceedings of the 12th European Conference on Ambient Intelligence, AmI 2015, held in Athens, Greece, in November 2015. Smartphones as Locative Media Jordan Frith, 2018-06-06 Smartphone adoption has surpassed 50% of the population in more than 15 countries, and there are now more than one million mobile applications people can download to their phones. Many of these applications take advantage of smartphones as locative media, which is what allows smartphones to be located in physical space. Applications that take advantage of people's location are called location-based services, and they are the focus of this book. Smartphones as locative media raise important questions about how we understand the complicated relationship between the Internet and physical space. This book addresses these questions through an interdisciplinary theoretical framework and a detailed analysis of how various popular mobile applications including Google Maps, Facebook, Instagram, Yelp, and Foursquare use people's location to provide information about their surrounding space. The topics explored in this book are essential reading for anyone interested in how smartphones and location-based services have begun to impact the ways we navigate and engage with the physical world.

Reference and Information Services Kay Ann Cassell, Uma Hiremath, 2013 Search skills of today bear little resemblance to searches through print publications. Reference service has become much more complex than in the past, and is in a constant state of flux. Learning the skill sets of a worthy reference librarian can be challenging, unending, rewarding, and-- yes, fun.

*A History of the World in Twelve Maps* Jerry Brotton, 2012-09-06 Jerry Brotton is the presenter of the acclaimed BBC4 series 'Maps: Power, Plunder and Possession'. Here he tells the story of our world through maps. Throughout history, maps have been fundamental in shaping our view of the world, and our place in it. But far from being purely scientific objects, world maps are unavoidably ideological and subjective, intimately bound up with the systems of power and authority of particular times and places. Mapmakers do not simply represent the world, they construct it out of the ideas of their age. In this scintillating book, Jerry Brotton examines the significance of 12 maps - from the mystical representations of ancient history to the satellite-derived imagery of today. He vividly recreates the environments and circumstances in which each of the maps was made, showing how each conveys a highly individual view of the world - whether the Jerusalem-centred Christian perspective of the 14th century Hereford Mappa Mundi or the Peters projection of the 1970s which aimed to give due weight to 'the third world'.

Although the way we map our surroundings is once more changing dramatically, Brotton argues that maps today are no more definitive or objective than they have ever been - but that they continue to make arguments and propositions about the world, and to recreate, shape and mediate our view of it. Readers of this book will never look at a map in quite the same way again.

Brilliant Ideas for Using ICT in the Inclusive Classroom Sally McKeown, Angela McGlashon, 2012-07-26 Shortlisted as ERA Finalist 2013 How can you use ICT to boost the achievement of all your pupils?
