Records of English Court Music Andrew Ashbee,2017-09-19 Pioneering work on the musical material from the archives of the English court was undertaken by Nagel (1894), Lafontaine (1909) and Stokes (in the Musical Antiquary 1903-1913). Records of English Court Music (a series of seven volumes covering the period 1485-1714) is the first attempt to compile a systematic calendar of such references. It aims to revise these earlier studies where necessary, adding significant details which researchers omitted, clarifying the context of documents and substituting current call-marks for defunct references. Volume V is primarily concerned with the post-Restoration years already partially covered in volumes I and II. The material from the Exchequer and Declared Accounts of the Treasurer of the Chamber has been revised to include references to trumpeters and drummers. Other sections are devoted to material outside the Lord Chamberlain's papers: the Signet Office Docquet Books, Secret Service accounts and more from the Exchequer; the Corporation of Musick (controlled by the Court musicians) and to the range of music material from accounts of the Receivers General. Samples from the comprehensive records of the Lord Steward's department (including those of the Cofferer of the Household) are also provided. Andrew Ashbee was the winner of the Oldman Prize in 1987 for Volume II in the series of 'Records of English Court Music', awarded by the UK branch of the International Association of Music Libraries for the year's best book on music librarianship, bibliography and reference.

Functional Verification Coverage Measurement and Analysis Andrew Piziali,2004-06-07 Functional Verification Coverage Measurement and Analysis addresses the subject of coverage measurement and analysis, a means of quantitatively assessing functional verification progress. In the absence of

this process, design verification engineers (and their management) are left guessing whether or not they have completed verifying the device they are designing. Using the techniques described in this book, they will learn how to build a toolset which, when applied to the verification of their device, allows them to know how close they are to functional closure. Functional Verification Coverage Measurement and Analysis will be of interest to both professionals and academics as it instructs verification engineers and designers on how to measure verification progress and opens a number of areas of research for academia.

Complex, Intelligent and Software Intensive Systems Leonard Barolli,2022-06-16 Software intensive systems are systems, which heavily interact with other systems, sensors, actuators, devices, other software systems, and users. More and more domains are involved with software intensive systems, e.g., automotive, telecommunication systems, embedded systems in general, industrial automation systems, and business applications. Moreover, the outcome of web services delivers a new platform for enabling software intensive systems. Complex systems research is focused on the overall understanding of systems rather than its components. Complex systems are very much characterized by the changing environments in which they act by their multiple internal and external interactions. They evolve and adapt through internal and external dynamic interactions. The development of intelligent systems and agents, which is each time more characterized by the use of ontologies and their logical foundations, builds a fruitful impulse for both software intensive systems and complex systems. Recent research in the field of intelligent systems, robotics, neuroscience, artificial intelligence, and cognitive sciences is a very important factor for the future development and innovation of software intensive and complex systems. The aim of the book "Complex, Intelligent and Software Intensive Systems" is to deliver a platform of scientific interaction between the three interwoven challenging areas of research and development of future ICT-enabled applications: software intensive systems, complex systems, and intelligent systems.

Leveraging Applications of Formal Methods, Verification, and Validation Tiziana Margaria,Bernhard

Steffen,2010-11-02 This volume contains the conference proceedings of the 4th International S-posium on Leveraging Applications of Formal Methods, Veri?cation and Vali- tion, ISoLA 2010, which was held in Greece (Heraklion, Crete) October 18–21, 2010, and sponsored by EASST. Following the tradition of its forerunners in 2004, 2006, and 2008 in Cyprus and Chalchidiki, and the ISoLA Workshops in Greenbelt (USA) in 2005, in Poitiers (France) in 2007, and in Potsdam (Germany) in 2009, ISoLA 2010 p- vided a forum for developers, users, and researchers to discuss issues related to the adoption and use of rigorous tools and methods for the speci?cation, ana- sis, veri?cation, certi?cation, construction, testing, and maintenance of systems from the point of view of their di?erent application domains. Thus, the ISoLA series of events serves the purpose of bridging the gap between designers and developers of rigorous tools, and users in engineering and in other disciplines, and to foster and exploit synergetic relationships among scientists, engineers, software developers, decision makers, and other critical thinkers in companies and organizations. In particular, by providing a venue for the discussion of c- mon problems, requirements, algorithms, methodologies, and practices, ISoLA aims at supporting researchers in their quest to improve the utility, reliability, ?exibility, and e?ciency of tools for building systems, and users in their search for adequate solutions to their problems.

Designing Geodatabases for Transportation J. Allison Butler,2008 Designing Geodatabases for Transportation addresses the development of a GIS to manage data relating to the transportation facilities and service commonly organized around various modes of travel for accurate and reliable

data exchange. Transportation involves several modes of travel, and although the details of each mode can be quite different, this book demonstrates how all follow a basic conceptual structure. That structure consists of an origin, a destination, a path between the two, and a conveyance that provides the ability to move along the path to establish a common data structure.
