African linguistics on the prairie Jason Kandybowicz, Travis Major, Harold Torrence, Philip T. Duncan, 2018-06-15 African Linguistics on the Prairie features select revised peer-reviewed papers from the 45th Annual Conference on African Linguistics, held at the University of Kansas. The articles in this volume reflect the enormous diversity of African languages, as they focus on languages from all of the major African language phyla. The articles here also reflect the many different research perspectives that frame the work of linguists in the Association for Contemporary African Linguistics. The diversity of views presented in this volume are thus indicative of the vitality of current African linguistics research. The work presented in this volume represents both descriptive and theoretical methodologies and covers fields ranging from phonetics, phonology, morphology, typology, syntax, and semantics to sociolinguistics, discourse analysis, language acquisition, computational linguistics and beyond. This broad scope and the quality of the articles contained within holds out the promise of continued advancement in linguistic research on African languages.

*Stochastic Geometry Analysis of Cellular Networks* Bartłomiej Błaszczyszyn, Martin Haenggi, Paul Keeler, Sayandev Mukherjee, 2018-04-19

Achieve faster and more efficient network design and optimization with this comprehensive guide. Some of the most prominent researchers in the field explain the very latest analytic techniques and results from stochastic geometry for modelling the signal-to-interference-plus-noise ratio (SINR) distribution in heterogeneous cellular networks. This book will help readers to understand the effects of combining different system deployment parameters on key performance indicators such as coverage and capacity, enabling the efficient allocation of simulation resources. In addition to covering results for network models based on the Poisson point process, this book presents recent results for when non-Poisson base station configurations appear Poisson, due to random propagation effects such as fading and shadowing, as well as non-Poisson models for base station configurations, with a focus on determinantal point processes and tractable approximation methods. Theoretical results are illustrated with practical Long-Term Evolution (LTE) applications and compared with real-world deployment results.

**Physical Components of Correctional Goals** Kenneth L. McReynolds, 1972 This study identifies a design process which uses three categories of variables to identify the interrelationships between correctional goals and the design of correctional facilities. The variables are the physical components, the operational characteristics needed for implementing the correctional programs, and the behavioral patterns of residents and staff. The physical components are restructured in a way that reduces the interaction between groups of physical variables while maintaining a high level of homogeneity within each group. Relationships between the operational and physical variables are used in the model to determine the interrelationships among the physical variables. The interrelationships, recorded on matrices, provide the input for a computer-aided factor analysis approach to identify all variable combinations, or 'pure core groups', in a matrix and to compute a homogeneity index to evaluate the homogeneity for each group. The physical variables are regrouped through the selection of the set of pure core groups with the highest degree of discrimination. The interrelationships tie the groups together into a hierarchy from which conflicts can be identified, trade-offs can be evaluated, and design decisions can be made. The working model is used to determine what effects, if any; similar and dissimilar organizations have on the physical variable groupings. Four sample facilities are chosen for examination. Empirical data, gathered through interviews with staff and residents, observations of resident-staff encounters and from internal reports, makes it possible to identify the interrelationships between the variables. Main findings of the study outline the importance of access to public transportation and community resources.

**Guinea Languages of the Atlantic Group** André Auguier Wilson,2007 Atlantic is one of the most diversified and most problematic Niger-Congo families as far as evidence for a monogenetic origin is concerned. Moreover, the group remains poorly known. Besides well-studied languages such as Fula, Wolof and Serer some sixty lesser known languages of Senegal, Guinea-Bissau, Guinea, Sierra Leone and Liberia are currently believed to belong to Atlantic. Many of these languages are not yet documented, and some never will - they disappeared some decades ago or are just on the verge of extinction. This book provides an overview of Atlantic south of the Wolof, Serer and Fula-speaking regions. The sections on the various Atlantic languages present information on phonology, morphology and basic syntactic patterns by using General Linguistic Theory. Lexical material is presented in comparative wordlists. All data stem from the author's own fieldwork in the 1950s and 1960s in Guinea Bissau and Guinea.

**Grammaticalization and Variation** Nicole Hober,2021-11-08 Grammaticalization research looks back on a rich history, but recent empirical findings, as well as new insights from cognitive science and psycholinguistics, entice researchers to reassess and review what we know about the process. This book presents a detailed study of the grammaticalization of motion verbs in the Mayan languages. The focus lies on variation in the parallel grammaticalization of motion verbs into auxiliaries and directionals. It is demonstrated that the genetically related and areally close languages do not always grammaticalize source items in the same way - both from a formal and meaning perspective. The empirical findings suggest that traditional theories on grammaticalization do not capture the complex nature of the phenomenon entirely. Therefore, a Network Approach to grammaticalization is introduced which emphasizes a 'meaning-first' account. The approach seeks to combine the conceptual with the discourse-pragmatic while being firmly grounded in cognitive and psychological facts. New insights into the grammaticalization behavior of the world's languages are offered, while well-established notions and assumptions within the grammaticalization research paradigm are reviewed and challenged.

*The Role of Semantic, Pragmatic, and Discourse Factors in the Development of Case* Jóhanna Barðdal, Shobhana L. Chelliah,2009-03-11 The aim of this volume is to bring non-syntactic factors in the development of case into the eye of the research field, by illustrating the integral role of pragmatics, semantics, and discourse structure in the historical development of morphologically marked case systems. The articles represent fifteen typologically diverse languages from four different language families: (i) Indo-European: Vedic Sanskrit, Russian, Greek, Latin, Latvian, Gothic, French, German, Icelandic, and Faroese; (ii) Tibeto-Burman, especially the Bodic languages and Meithei; (iii) Japanese; and (iv) the Pama-Nyungan mixed language Gurindji Kriol. The data also show considerable diversity and include elicited, archival, corpus-based, and naturally occurring data. Discussions of mechanisms where change is obtained include semantically and aspectually motivated synchronic case variation, discourse motivated subject marking, reduction or expansion of case marker distribution, case syncretism motivated by semantics, syntax, or language contact, and case splits motivated by pragmatics, metonymy, and subjectification.

*Celebrating 50 years of ACAL* Akinbiyi Akinlabi ,Lee Bickmore,Michael Cahill ,Michael Diercks,Laura J. Downing,James Essegbey,Katie Franich ,Laura McPherson ,Sharon Rose , The papers in this volume were presented at the 50th Annual Conference on African Linguistics held at the University of British Columbia in 2019. The contributions span a range of theoretical topics as well as topics in descriptive and applied linguistics. The papers reflect the typological and genetic diversity of languages in Africa and also represent the breadth of the ACAL community, with papers from both students and more senior scholars, based in North America and beyond. They thus provide a snapshot on current research in African linguistics, from multiple perspectives. To mark the 50th anniversary of the conference, the volume editors reminisce, in the introductory chapter,

about their memorable ACALs.

*A Berichtigungsliste of Demotic Documents: Papyrus editions* A. A. den Brinker, Brian Paul Muhs, S. P. Vleeming, 2005 There seems to be no brief English equivalent for the concept of a +Berichtigungsliste; . This demotic +Berichtigungsliste; collects and critically presents corrections and supplements to editions of demotic documentary texts: papyri, ostraka, inscriptions, mummy labels, graffiti - everything demotic that was not clearly written as a secular or religious literary composition. We have added all the information we have found concerning inventory numbers and photographs as well as republications of the texts in question which the scholar working with these texts might like to have. Although the +Berichtigungsliste; chiefly concerns text editions, be they published in monographs or articles, texts that have been published only in photography or facsimile are also included. The period covered for the publications that have been ransacked for the purpose of our +Berichtigungsliste; is roughly the Twentieth Century: 1900-2000. In subsequent volumes, we intend to extend this time-range into the Nineteenth Century as well as into the future.

*Asian Highlands Perspectives 2B* Libu Lakhi, Tsering Bum, Charles Kevin Stuart, This remarkable book is the product of a fruitful collaboration among a native speaker of the Namuyi language, Tibetan and Chinese consultants, and a dedicated group of Westerners resident in China. It affords the reader an intimate glimpse into traditional Namuyi, now well on its way to disappearing along with hundreds of similar minority cultures in the world. The authors of this book are to be congratulated for putting Namuyi language and culture 'on the map' in such a clear and respectful fashion. *Itzaj Maya Grammar* Charles Andrew Hofling,Félix Fernando Tesucún,2000 The Itzaj Maya language is member of a the Yukatekan Maya language family spoken in the lands of Guatemala, Mexico, and Belize, a family that includes Maya, Mopan, and Lakantun. Many Classic Maya hieroglyphic texts were written in an earlier form of these languages, as were many important colonial documents. In addition to being a valuable record of an ancient language, Andrew Hofling's Itzaj Maya Grammar contributes greatly to the study of these older documents. This exemplary grammar completes a basic documentation that began with Itzaj Maya Texts and Itzaj Maya-Spanish-English Dictionary. Its coverage of the linguistic structures of Itzaj includes the phonological, morphophonological, and syntactic structures. Each morphological and grammatical construction is carefully explained, with additional examples of each construction included. Itzaj Maya Grammar is a landmark contribution to the study of discourse in Maya languages. When used with Hofling's previous texts, it provides a thoroughly dynamic documentation of the language, useful to all interested in the study of Yukatekan languages or linguistics.
