Generative SLA in the Age of Minimalism Tania Leal,Elena Shimanskaya,Casilde A. Isabelli,2022-08-17 This volume brings together empirical studies and keynote addresses presented at the 15th Generative Approaches to Second Language Acquisition conference hosted by the University of Nevada, Reno in 2019. The studies selected for the volume reflect how the latest developments in generative syntactic theory and psycholinguistic methodologies have impacted second language acquisition research in the last decade, from the linguistic properties under investigation and L1-L2/Ln language pairings down to the specific research questions in each study. The minimalist view of language architecture is at the center of studies investigating L2 acquisition of raising, scope, definiteness, phonological representations, and interlanguage transfer. The volume also showcases the latest research on interface phenomena, language processing, and working memory. Studies analyze data collected with a variety of L2 populations from adult foreign language learners to adolescent L3 learners and heritage speakers.

Bernhardt,2023-10-09 Combining a collection of data on phonological acquisition with attention to Optimality Theory, this book blends the studies of linguistics, psycholinguistics, and speech-language pathology in reference to phonological development. It also contains an evaluation of competing theories and presents a view of non-linear phonology.

Formal Studies in Slavic Linguistics Anastasia Smirnova,Vedrana Mihaliček,Lauren Ressue,2010 Formal Studies in Slavic Linguistics is a collection of selected papers presented at the Graduate Colloquia on Slavic Linguistics held at the Ohio State University, and as such presents current research of young scholars from top European and American universities. The present volume is a continuation of Issues in Slavic Syntax and Semantics (2008). Unlike its predecessor, Formal Studies in Slavic Linguistics exclusively focuses on synchronic analyses of challenging phenomena in various Slavic languages and expands its theoretical scope to include essays in virtually all areas of theoretical linguistics: phonetics, phonology, morphosyntax, syntax, semantics and pragmatics. The papers in this volume discuss consonant deletion in Russian and phonetic patterns in Russian loan words, properties of Slovenian clitics and the constructions involving the prefix na- in Slovenian, subjunctive clauses in Polish, Serbo-Croatian multiple wh questions, negative-contrastive ellipsis and impersonal constructions in Russian. The formal frameworks employed in the analyses of these phenomena range from optimality theory to minimalism. Given its broad empirical and theoretical scope, Formal Studies in Slavic Linguistics is bound to be of interest to Slavic scholars and general linguists alike.

Vowel Epenthesis in Loanword Adaptation Christian Uffmann,2007-01-01 While it is commonly assumed that languages epenthesize context-free default vowels, this book shows that in loanword adaptation, several strategies are found which interact intricately. Large loanword corpora in Shona, Sranan, Samoan and Kinyarwanda are analyzed statistically, and the patterns are modeled in a version of Optimality Theory which introduces constraints on autosegmental representations. The focus of this book is on English loans in Shona, providing an in-depth empirical and formal analysis of epenthesis in this language. The analysis of additional languages allows for solid typological

generalizations. In addition, a diachronic study of epenthesis in Sranan provides insight into how insertion patterns develop historically. In all languages analyzed, default epenthesis exists alongside vowel harmony and spreading from adjacent consonants. While different languages prefer different strategies, these strategies are subject to the same set of constraints, however. In spreading, feature markedness plays an important role alongside sonority. We suggest universal markedness scales which combine with constraints on autosegmental configurations to model the patterns found in individual languages and at the same time to constrain the range of possible crosslinguistic variation.

Alf lahga wa lahga Olivier Durand, Angela Daiana Langone, Giuliano Mion, 2014 This volume is a collection of articles written by more than 40 scholars who work in the field of Arabic dialectology. All articles are revised versions of papers presented at the 9th Conference of the Association Internationale de Dialectologie Arabe (AIDA) held in Pescara in March 2011. The variety of dialects represented in the book engage various issues in Arabic dialectology - such as sedentary and Bedouin dialects, sociolinguistic phenomena, and the written dimension - investigated from both synchronic and diachronic perspectives. The broad range of meaningful subjects that are tackled in the book offer an important contribution to the current debates on general linguistics and sociolinguistics, Arabic linguistics, Arabic literature, as well as Semitic and Islamic studies. The Phonology of Romanian Ioana Chițoran, 2002 The architecture of the human language faculty has been one of the main foci of the linguistic research of the last half century. This branch of linguistics, broadly known as Generative Grammar, is concerned with the formulation of explanatory formal accounts of linguistic phenomena with the ulterior goal of gaining insight into the properties of the 'language organ'. The series comprises high quality monographs and collected volumes that address such issues. The topics in this series range from phonology to semantics, from syntax to information structure, from mathematical linguistics to studies of the lexicon.

Pure C Programming Amir Afzal, 1999 Easing students through a complete survey of the C programming language, this consistently paced text begins with an introduction to the language at a level that is understandable by non-C programmers, progresses to intermediate level coverage, then finishes off with more complex concepts, with each topic building upon what precedes it. Current, accurate, and rich with example programs and diagrams, it uses a general purpose approach that gives students the freedom to apply the C programming to a variety of environments, providing a solid foundation in the language that will enable them to move on to more advanced/ reference type books with confidence.* Accessible to non-C/C++ programmers. * Assumes only computer skills - no programming skills. * A focus on pure C and C++ language concepts and syntax - Not on programming design techniques, program development methodologies, specific business or science applications, or any specific compilers or development environments. * Provides students with a solid C or C++ foundation - so they can apply C/C++ programming to a variety of environments, and can move on to more advanced/reference type books and compiler help facilities with ease
