The Fear of Snakes Nobuyuki Kawai, 2019-09-05 This book provides a series of compelling evidence that shows that humans have innate fear of snakes. Building on the previous studies on the Snake Detection Theory (SDT), the author presents a summary of psychological and neuropsychological experiments to explain the fear of snakes in humans and primates. Readers will come to understand why and how we are afraid of snakes from an evolutionary perspective. The first half of the book discusses the history of psychological behaviorism and neobehaviorism. The latter half of the book consists mainly of the experimental studies performed by the author with a focus on three key items: First, compared with other animals, snakes especially draw the attention of primates and humans. Second, the ability of primates and humans to recognize snakes with particular efficiency. Third, processing mechanisms within the brain for snake detection is discussed from a new viewpoint. The book offers a unique resource for all primatologists, psychologists, neuroscientists, anthropologists, herpetologists, and biologists who are interested in the evolution of visual and cognitive systems, mechanisms of fear, snakes or primates.

Lexicalising Clausal Syntax Tibor Laczkó, 2021-11-15 The book presents a new perspective on clausal syntax and its interactions with lexical and discourse function information by analysing Hungarian sentences. It also demonstrates ways in which grammar engineering implementations can provide insights into how complex linguistic processes interact. It analyses the most important phenomena in the preverbal domain of Hungarian finite declarative and wh-clauses: sentence structure, operators, verbal modifiers, negation and copula constructions. Based on the results of earlier generative linguistic research, it presents the fundamental empirical generalisations and offers a comparative critical assessment of the most salient analyses in a variety of generative linguistic models from its own perspective. It argues for a lexical approach to the relevant phenomena and develops the first comprehensive analysis in the theoretical framework of Lexical-Functional Grammar. It also reports the successful implementation of crucial aspects of this analysis in the computational linguistic platform of the theory, Xerox Linguistic Environment.

Night Music L. E. Sissman, 1999 Selected by Peter Davison with an introduction by Edward Hirsch. Sissman was a true phenomenon in American poetry. He published his first book, a collection of antic, autobiographical episodes in blank verse, in 1968. Eight years and three books later, he died of Hodgkin's disease at the age of forty-

eight. Of Sissman's remarkable final poems John Updike wrote, What other poet had ever given such wry and unblinking witness to his own dying? His poetry gave back to life more generously than he had received, and carried his beautiful wit into darkness undimmed. Now Sissman's longtime editor, Peter Davison, has selected from his lifework the essential poems--the essence of an American original. (A Mariner Original)

Running Well Sam Murphy, Sarah Connors, 2009 Providing the keys to maximizing performance while avoiding injuries, Running Well allows runners at all levels to easily assess and improve technique. Anatomical art supplements the thorough coverage of causes and symptoms of dozens of running injuries.

An Average Morning in the Galaxy Stephen Parr, 2013-11 A collection of transformative poetry by a leading exponent of the genre. Poems have been called urgent, loving and shadowed by death; visionary, finely crafted, they come from moments of deep awareness, and touch the heart. Unlike anything else you will find in contemporary writing.

Talking the Walk & Walking the Talk Marc Shell, 2015-09-01 This book argues that we should regard walking and talking in a single rhythmic vision. In doing so, it contributes to the theory of prosody, our understanding of respiration and looking, and, in sum, to the particular links, across the board, between the human characteristics of bipedal walking and meaningful talk. The author first introduces the philosophical, neurological, anthropological, and aesthetic aspects of the subject in historical perspective, then focuses on rhetoric and introduces a tension between the small and large issues of rhythm. He thereupon turns his attention to the roles of breathing in poetry--as a life-and-death matter, with attention to beats and walking poems. This opens onto technical concepts from the classical traditions of rhetoric and philology. Turning to the relationship between prosody and motion, he considers both animals and human beings as both ostensibly able-bodied creatures and presumptively disabled ones. Finally, he looks at dancing and writing as aspects of walking and talking, with special attention to motion in Arabic and Chinese calligraphy. The final chapters of the book provide a series of interrelated representative case studies.

Learning Through Movement Peter H. Werner, Elsie Carter Burton, 1979 Bewegungslehre, Lernen.

Fly-fishing Pressured Water Lloyd Gonzales, 2005 As fly fishing increases in popularity and rivers and streams become more congested, anglers must come up with strategies to fool the bright and finicky fish. Through years of experimentation both on the water and at the vise, Lloyd Gonzales has developed techniques for tying artificial mayflies, sedges, stoneflies, and baitfish that focus on general styles of flies and variations to deal with specific challenges to catch tricky trout. This modern fly-style approach, focusing on a fly's design and construction rather than on a specific pattern, is applicable to more situations and more easily adjusted to match local species than the traditional pattern approach. The fly-style approach is orderly--styles progress through the book, establishing a framework that can support any skill level and type of water--and fluid, allowing for experimentation and a personal flair, a key to tying flies that bring success on fly-saturated pressured water.

303 Kid-Approved Exercises and Active Games Kimberly Wechsler, 2012-06-12 With game consoles and the Internet, children are playing as much as they always have--but now, they sit still while doing it. Kids spend as much time watching TV, using computers, and playing video games as they spend in school each week. One in every three kids in America is considered overweight or obese, and the number one concern that parents bring up to pediatricians is keeping kids fit. Half of all children are not physically active enough for the development of a healthy cardiovascular system. 303 Kid-Approved Exercises and Active Games helps 6-8 year old kids get off their chairs with fun and age-appropriate exercises. Exercise for children must be fun. These exercises have been used for personal training sessions, kids fitness classes, kids fitness camps, birthday parties and in schools; they have all been "Kid-Approved!". Kimberley Wechsler, a specialist in Kid's Fitness, took into account the fundamental attributes of being a child while developing these exercises. Children have specific physiologic differences that make them unique. They grow, mature, and develop skills at different ages, so what may be skill appropriate for one child could be harmful for another child. These exercises reflect the emotional, social, physical level of this age group. At this age, children feel confident with the basic skill of fitness and are now ready to be challenged to more complex moves. They are now at the skill level in which physical challenges like balance, muscle building, hand-eye, hand-foot coordination, increasing challenges for their fine and gross motor skills, and functional training can be more added. They are growing in their intellectual and emotional processes as well, which now allows this age group to follow and understand simple rules of a sport. They are also introduced to the concept of friendly competition and sports fitness. Children also enjoy using their imagination and fantasy, so exercises require the use of their imagination. There are games and fitness challenges that require kids to take an active role in learning new skills, and there are introductions to new sports. Kids still enjoy outside participation so families, friends, educators and counselors can participate in all of the 303 activities. Kids at this age can't seem to sit still--their minds are always thinking and their bodies are always moving. Children have short attention spans, so most of the activities can be played within a 15 minute period of time and many choices are offered throughout the book. 303 Kid-Approved Exercises and Active Games supports children's energy and directs it in a positive way; the activities take advantage of a child's natural tendency to be active with unstructured or free play. 303 Kid-Approved Exercises and Active Games develops intellectual, emotional, and social skills for children, all the while promoting an active and healthy lifestyle.
