Effective GUI Testing Automation Kanglin Li,Mengqi Wu,2006-02-20 Have you tried using an automated GUI testing tool, only to findthat you spent most of your time configuring, adjusting, anddirecting it? This book presents a sensible and highly effective alternative:it teaches you to build and use your own truly automated tool. Theprocedure you'll learn is suitable for virtually any developmentenvironment, and the tool allows you to store your test data andverification standard separately, so you can build it once and useit for other GUIs. Most, if not all, of your work can be donewithout test scripts, because the tool itself can easily be made toconduct an automatic GUI survey, collect test data, and generatetest cases. You'll spend virtually none of your time playing withthe tool or application under test. Code-intensive examples support all of the book's instruction,which includes these key topics: Building a C# API text viewer Building a test monkey Developing an XML viewer using xPath and other XML-relatedclasses Building complex, serializable classes for GUI testverification Automatically testing executable GUI applications anduser-defined GUI controls Testing managed (.NET) and unmanaged GUI applications Automatically testing different GUI controls, including Label,TextBox, Button, CheckBox, RadioButton, Menu Verifying test results Effective GUI Test Automation is the perfect complement to Liand Wu's previous book, Effective Software Test Automation:Developing an Automated Software Testing Tool. Together, theyprovide programmers, testers, designers, and managers with acomplete and cohesive way to create a smoother, swifter developmentprocess—and, as a result, software that is as bug-free aspossible.

Ascension Gabriel Da Silva,2006-03-01 'Ascension' is a new kind of sci fi. It's dark, gothy cyberpunk, with a twist or two in the tail. Set in a tower with Heaven at the top and Hell at the bottom, Frakture is a humanoid creature able to swap limbs at will as she ascends towards the top. Her bizzare struggles are not dissimilar to those we face in our own lives, the question being when do you give up and settle for what you've got?

Computational Intelligence Kurosh Madani,António Dourado,Agostinho Rosa,Joaquim Filipe,Janusz Kacprzyk,2015-11-19 The present book includes a set of selected extended papers from the fifth International Joint Conference on Computational Intelligence (IJCCI 2013), held in Vilamoura, Algarve, Portugal, from 20 to 22 September 2013. The conference was composed by three co-located conferences: The International Conference on Evolutionary Computation Theory and Applications (ECTA), the International Conference on Fuzzy Computation Theory and Applications (FCTA), and the International Conference on Neural Computation Theory and Applications (NCTA). Recent progresses in scientific developments and applications in these three areas are reported in this book. IJCCI received 111 submissions, from 30 countries, in all continents. After a double blind paper review performed by the Program Committee, only 24 submissions were accepted as full papers and thus selected for oral presentation, leading to a full paper acceptance ratio of 22%. Additional papers were accepted as short papers and posters. A further selection was made after the Conference, based also on the assessment of presentation quality and audience interest, so that this book includes the extended and revised versions of the very best papers of IJCCI 2013. Commitment to high quality standards is a major concern of IJCCI that will be maintained in the next editions, considering not only the stringent paper acceptance ratios but also the quality of the program committee, keynote lectures, participation level and logistics.

Critical Ecofeminism Greta Gaard,2017-06-16 Australian feminist philosopher Val Plumwood coined the term "critical ecofeminism" to "situate humans in ecological terms and non-humans in ethical terms," for "the two tasks are interconnected, and cannot be addressed properly in isolation from each other." Variously using the terms "critical ecological feminism," "critical anti-dualist ecological feminism," and "critical ecofeminism," Plumwood's work developed amid a range of perspectives describing feminist intersections with ecopolitical issues—i.e., toxic production and toxic wastes, indigenous sovereignty, global economic justice, species justice, colonialism and dominant masculinity. Well over a decade before the emergence of posthumanist theory and the new materialisms, Plumwood's critical ecofeminist framework articulates an implicit posthumanism and respect for the animacy of all earthothers, exposing the linkages among diverse forms of oppression, and providing a theoretical basis for further activist coalitions and interdisciplinary scholarship. Had Plumwood lived another ten years, she might have described her work as "Anthropocene Ecofeminism," "Critical Material Ecofeminism," "Posthumanist Anticolonial Ecofeminism"—all of these inflections are present in her work. Here, Critical Ecofeminism advances upon Plumwood's intellectual, activist, and scholarly work by exploring its implications for a range of contemporary perspectives and issues--critical animal studies, plant studies, sustainability studies, environmental justice, climate change and climate justice, masculinities and sexualities. With the insights available through a critical ecofeminism, these diverse eco-justice perspectives become more robust.

Developments in Modern Racecar Driver Crash Protection and Safety John Melvin,J Kirk Russell,2013-10-14 For many years, the evolution of safety improvements in motorsports was the result of a combination of science and perceived safe practices. Most safety developments were not based on rigorous laboratory testing, but rather on intuition and a "let's try it and see what happens" approach. During the last few decades, motorsports has benefited from the organized research efforts made possible by academia, manufacturers, and sanctioning bodies, leading to present-day motorsports safety methodologies based on solid data and testing. This compendium, edited by some of the foremost racing safety experts, comprises selected technical papers that document the development and implementation of key motorsports safety technologies now in use. It is intended to provide racing professionals and enthusiasts with a concise overview of the significant engineering developments in motorsports driver safety that has occurred during the past two decades. The 13 papers chosen for this compendium, published between 1990 and 2013, reflect landmark safety studies and developments of that time. Eleven of the papers were published by SAE International and two were presented at the Stapp Car Crash Conference. The papers cover the following topics: • Crash testing simulations • Human crash injury and survival • Reducing driver injury in severe crashes • Head and neck restraints, including the HANS device • Race car seats • Restraint systems • Track safety and barrier systems The final paper is a study on the detailed performance of restraint systems and seats in examples of severe stock car crashes. The paper represents a succinct example of modern crash investigation of racing crashes with crash recording data, detailed injury analysis, and protective system performance. The progress in motorsports safety, as described in this compendium, has been dramatically effective in reducing driver injuries at the top levels of motorsports. Unfortunately, this is not true at the lower levels, where drivers continue to suffer preventable injuries and fatalities.

Crash Karen Redrobe,2010-08-03 Artists, writers, and filmmakers from Andy Warhol and J. G. Ballard to Alejandro González Iñárritu and Ousmane Sembène have repeatedly used representations of immobilized and crashed cars to wrestle with the conundrums of modernity. In Crash, Karen

Beckman argues that representations of the crash parallel the encounter of film with other media, and that these collisions between media offer useful ways to think about alterity, politics, and desire. Examining the significance of automobile collisions in film genres including the "cinema of attractions," slapstick comedies, and industrial-safety movies, Beckman reveals how the car crash gives visual form to fantasies and anxieties regarding speed and stasis, risk and safety, immunity and contamination, and impermeability and penetration. Her reflections on the crash as the traumatic, uncertain moment of inertia that comes in the wake of speed and confidence challenge the tendency in cinema studies to privilege movement above film's other qualities. Ultimately, Beckman suggests that film studies is a hybrid field that cannot apprehend its object of study without acknowledging the ways that cinema's technology binds it to capitalism's industrial systems and other media, technologies, and disciplines.

Androids Chet Haase,2022-07-19 The fascinating inside story of how the Android operating system came to be. In 2004, Android was two people who wanted to build camera software but couldn't get investors interested. Today, Android is a large team at Google, delivering an operating system (including camera software) to over 3 billion devices worldwide. This is the inside story, told by the people who made it happen. Androids: The Team that Built the Android Operating System is a first-hand chronological account of how the startup began, how the team came together, and how they all built an operating system from the kernel level to its applications and everything in between. It describes the tenuous beginnings of this ambitious project as a tiny startup, then as a small acquisition by Google that took on an industry with strong, entrenched competition. Author Chet Haase joined the Android team at Google in May 2010 and later recorded conversations with team members to preserve the early days of Android's history leading to the launch of 1.0. This engaging and accessible book captures the developers' stories in their own voices to answer the question: How did Android succeed?

It's the story of Valerie, a twenty-three-year-old police officer in Montgomery County, Maryland, whose world is turned upside down when she learns about the abuses of animals in laboratories. The book describes how this law-abiding woman comes to challenge the system by taking direct action and examines why ordinary people are moved to do extraordinary things on behalf of animals. Full of fascinating characters, vivid descriptions, and thrilling incidents, and rich with details on what it means to live life on the run from the law (and agents provocateurs), Free the Animals is not only a classic for our times but a compellingly relevant examination of our cruelty to other animals.
