Combustion Technology: Some Modern Developments Howard Palmer,2012-12-02 Combustion Technology: Some Modern Developments reviews modern developments in combustion technology, with emphasis on furnace flames. Topics covered range from equilibria and chemical kinetics in flames to corrosion and deposits in combustion systems, along with combustion aerodynamics and noise. Heat transfer from non-luminous flames in furnaces is also investigated. Comprised of 15 chapters, this book begins with an overview of some aspects of the chemistry of flames, followed by a discussion on the problem of corrosion and deposits. Subsequent chapters focus on aerodynamics and heat transfer in combustors, together with combustion noise and the application of aerodynamic principles to flame stabilization in high-speed flow; radiative heat transfer in combustion chambers; electrical properties of flames; flame-field interactions and their practical applications; generation of electricity by magnetohydrodynamic methods; and practical aspects of magnetohydrodynamic power generation. The book also assesses the influence of stirred reactor theory on design principles for high-performance combustion chambers and concludes with a summary of developments in the design and utilization of oil burners. This monograph should be of interest to engineers and combustion technologists.

Theory and Phenomena of Metamaterials Filippo Capolino,2017-12-19 Theory and Phenomena of Metamaterials offers an in-depth look at the theoretical background and basic properties of electromagnetic artificial materials, often called metamaterials. A volume in the Metamaterials Handbook, this book provides a comprehensive guide to working with metamaterials using topics presented in a concise review format along with numerous references. With contributions from leading researchers, this text covers all areas where artificial materials have been developed. Each chapter in the text features a concluding summary as well as various cross references to address a wide range of disciplines in a single volume.

Growth of the Gastrointestinal Tract (1990) Jean A. Morisset,Travis E. Solomon,2017-11-22 This book provides an up-to-date summary of the large body of data regarding gastrointestinal hormones and growth factors involved in the development and maintenance of the architecture and physiological functions of the different organs of the digestive tract. The regulation of growth and differentiation in the stomach, small intestine, colon, and pancreas is reviewed by experts in developmental and adult physiology, as well as in pathophysiology of diseases involving each organ. The book provides essential reference material for gastroenterologists, medical and university libraries, and investigators and graduate students of gastrointestinal physiology.

<u>Information Structure and its Interfaces</u> Lunella Mereu,2009-02-26 The volume presents recent results in the field of Information Structure based on research on Italian and Italian dialects, and on further studies on several typologically different languages. The central idea is that Information Structure is not an exclusive matter of syntax but an interface issue which involves the interplay of at least the phonological, morpho-syntactic and semantic-pragmatic levels of analysis. In addition, the volume is based on the study of actual language use and it adopts a cross-linguistic point of view.

Inhibition of Flow Separation at High Speed Frederick K. Goodwin,Larry L. Lynes,1969 This is the last part of a four-part series of reports describing an investigation of the inhibition of boundary-layer separation of the free-interaction type at high speeds through the use of surface cooling. The purpose of this report is to extend the other work of the authors to configurations representative of axisymmetric compression spikes. The analysis is developed and a computer program written for a spike which consists of a conical nose on which separation occurs followed by compression surface. No data were found to compare with the theory. A calculation made with the pressure gradient prescribed by the body shape rather than by free interaction is compared with experiment. The comparisons, which were made for skin friction, heat transfer, and pressure distributions, were good. The significant effect of wall cooling in delaying separation for the prescribed pressure gradient case is shown. It is also shown that a free-interaction solution can be joined to a prescribed pressure gradient solution so that the solution will go smoothly through separation to reattachment.

<u>Design Methodologies for Space Transportation Systems</u> Walter Edward Hammond,2001 Annotation Design Methodologies for Space Transportation Systems is a sequel to the author's earlier text, Space Transportation: A Systems Approach to Analysis and Design. Both texts represent the most comprehensive exposition of the existing knowledge and practice in the design and project management of space transportation systems, and they reflect a wealth of experience by the author with the design and management of space systems. The text discusses new conceptual changes in the design philosophy away from multistage expendable vehicles to winged, reusable launch vehicles and presents an overview of the systems engineering and vehicle design process as well as systems trades and analysis. Individual chapters are devoted to specific disciplines such as aerodynamics, aerothermal analysis, structures, materials, propulsion, flight mechanics and trajectories, avionics and computers, and control systems. The final chapters deal with human factors, payload, launch and mission operations, safety, and mission assurance. The two texts by the author provide a valuable source of information for the space transportation community of designers, operators, and managers. A companion CD-ROM succinctly packages some oversized figures and tables, resources for systems engineering and launch ranges, and a compendium of software programs. The computer programs include the USAF AIRPLANE AND MISSILE DATCOM CODES (with extensive documentation); COSTMODL for software costing; OPGUID launch vehicle trajectory generator; SUPERFLO-a series of 11 programs intended for solving compressible flow problems in ducts and pipes found in industrial facilities; and a wealth of Microsoft Excel spreadsheet programs covering thedisciplines of statistics, vehicle trajectories, propulsion performance, math utilities,

Nature's Teleological Order and God's Providence Paul Weingartner,2014-12-11 The book defends that there is both teleological order (design) and chance in non-living and in living systems of nature including man. This is done by giving exact definitions of different types of order and teleological order on the one hand and of different types of chance on the other. For their compatibility it is important to notice that any definition of chance presupposes some kind of order relative to that we can speak of chance. Thus also in evolution which is some growth of some order and for which a detailed definition is given in chpt.13 chance and degrees of freedom play an essential role. A further purpose of the book is to show that both the existing order and the existing chance in nature are compatible with a global teleological plan which is God's providence. However concerning the execution of God's plan not everything is done or caused by himself but "God created things in such a way that they themselves can create something" (Gödel, MAX PHIL). A reason for that is that God is neither all-causing nor all-willing although he is almighty. This is connected with the result of chpts.15 and 16 that also human freedom and evil are compatible with God's providence.

Building and Maintaining Collaborative Communities Judith J. Slater,Ruth Ravid,R. Martin Reardon,2016-03-01 Building and Maintaining Collaborative Communities: Schools, University, and Community Organizations is a new and noteworthy volume in the literature on collaboration among schools and universities. It expands the playing field to include both publically and privately funded community organizations and the effects of the interaction of the three on projects in a multitude of settings both domestically and in international venues. Asked to analyze their projects following the Slater Matrix, nineteen examples provide an inside glimpse into the success and limitations of each project. Chapters are organized in order of complexity of type of collaboration. The editors expect this to be a useful guide for university personnel, school administrators, and community organizations wishing to embark or expand on projects involving schools, universities, and community organizations. In a time of short resources and uncertain sustainability, it should serve as a useful tool in making decisions in the planning, process, carrying out, and analysis of each endeavor.

Civil Engineering Applications of Ground Penetrating Radar Andrea Benedetto,Lara Pajewski,2015-04-07 This book, based on Transport and Urban Development COST Action TU1208, presents the most advanced applications of ground penetrating radar (GPR) in a civil engineering context, with documentation of instrumentation, methods and results. It explains clearly how GPR can be employed for the surveying of critical transport infrastructure, such as roads, pavements, bridges and tunnels and for the sensing and mapping of underground utilities and voids. Detailed attention is also devoted to use of GPR in the inspection of geological structures and of construction materials and structures, including reinforced concrete, steel reinforcing bars and pre/post-tensioned stressing ducts. Advanced methods for solution of electromagnetic scattering problems and new data processing techniques are also presented. Readers will come to appreciate that GPR is a safe, advanced, non destructive and noninvasive imaging technique that can be effectively used for the inspection of composite structures and the performance of diagnostics relevant to the entire life cycle of civil engineering works.
