Cross-Media Service Delivery Diomidis Spinellis,2003-05-31 The digitisation of traditional media formats, such as text, images, video, and sound provides us with the ability to store, process, and transport content in a uniform way. This has led the formerly distinct industries of media, telecommunications, and information technology to converge. Cross-media publishing and service delivery are important new trends emerging in the content industry landscape. Mass-media organizations and content providers traditionally targeted content production towards a single delivery channel. However, recent economic and technological changes in the industry led content providers to extend their brands to cover multiple delivery channels. Following the content industry trend to create once and publish everywhere-COPE, a number of architectures, technologies, and tools are currently being developed and deployed to facilitate the automatic conversion of content to multiple formats, and the creation of innovative multi-platform services. This new approach enables the seamless access to information over different network infrastructures and client platforms. This work aims to bring together a cross-disciplinary core of contributors to address the technical and business issues of cross-media publishing and service delivery. The volume is based on papers presented at the conference on Cross-Media Service Delivery-CMSD-2003 that took place in Santorini, Greece in May 2003. Each contribution was reviewed by at least two reviewers-typically three. From the 30 papers that were submitted 20 were selected for presentation at the conference. Those were further shepherded by programme committee members to be improved according to the review suggestions.

A First Course in Machine Learning, Second Edition Simon Rogers,Mark Girolami,2016-10-14 A First Course in Machine Learning by Simon Rogers and Mark Girolami is the best introductory book for ML currently available. It combines rigor and precision with accessibility, starts from a detailed explanation of the basic foundations of Bayesian analysis in the simplest of settings, and goes all the way to the frontiers of the subject such as infinite mixture models, GPs, and MCMC. –Devdatt Dubhashi, Professor, Department of Computer Science and Engineering, Chalmers University, Sweden This textbook manages to be easier to read than other comparable books in the subject while retaining all the rigorous treatment needed. The new chapters put it at the forefront of the field by covering topics that have become mainstream in machine learning over the last decade. –Daniel Barbara, George Mason University, Fairfax, Virginia, USA The new edition of A First Course in Machine Learning by Rogers and Girolami is an excellent introduction to the use of statistical methods in machine learning. The book introduces concepts such as mathematical modeling, inference, and prediction, providing ‘just in time’ the essential background on linear algebra, calculus, and probability theory that the reader needs to understand these concepts. –Daniel Ortiz-Arroyo, Associate Professor, Aalborg University Esbjerg, Denmark I was impressed by how closely the material aligns with the needs of an introductory course on machine learning, which is its greatest strength...Overall, this is a pragmatic and helpful book, which is well-aligned to the needs of an introductory course and one that I will be looking at for my own students in coming months. –David Clifton, University of Oxford, UK The first edition of this book was already an excellent introductory text on machine learning for an advanced undergraduate or taught masters level course, or indeed for anybody who wants to learn about an interesting and important field of computer science. The additional chapters of advanced material on Gaussian process, MCMC and mixture modeling provide an ideal basis for practical projects, without disturbing the very clear and readable exposition of the basics contained in the first part of the book. –Gavin Cawley, Senior Lecturer, School of Computing Sciences, University of East Anglia, UK This book could be used for junior/senior undergraduate students or first-year graduate students, as well as individuals who want to explore the field of machine learning...The book introduces not only the concepts but the underlying ideas on algorithm implementation from a critical thinking perspective. –Guangzhi Qu, Oakland University, Rochester, Michigan, USA

L.A. Raw Michael Duncan,2012 Until recently, the figurative artists who dominated the Los Angeles art scene of the 1940s and 50s had largely been written out of art history. L.A. Raw is an attempt to right that wrong. Bringing together works by 41 artists in a variety of media, it traces a lineage that connects postwar figurative expressionism to the 1960s and 70s investigations of politics, gender and ethnicity in art. The featured artists include John Altoon, Wallace Berman, William Brice, Hans Burckhardt, Chris Burden, Cameron, Judy Chicago, Connor Everts, Llyn Foulkes, Charles Garabedian, David Hammonds, Robert Heinecken, John Paul Jones, Kim Jones, Ed and Nancy Kienholz, Rico Lebrun, Paul McCarthy, Arnold Mesches, Betye Saar, Ben Sakoguchi, Barbara Smith, James Strombotne, Jan Stussy, Edward Teske, Joyce Treiman, Howard Warshaw, June Wayne, Charles White and Jack Zajac.

Bearers of Meaning John Onians, 1990-02-04 For all those interested in the relationship between ideas and the built environment, John Onians provides a lively illustrated account of the range of meanings that Western culture has assigned to the Classical orders. Onians shows that during the 2,000 years from their first appearance in ancient Greece through their codification in Renaissance Italy, the orders--the columns and capitals known as Doric, Ionic, Corinthian, Tuscan, and Composite--were made to serve expressive purposes, engaging the viewer in a continuing visual dialogue.

Slavs and Tatars Pablo Larios, 2017 Defining an area 'east of the former Berlin Wall and west of the Great Wall of China' as their remit, Slavs and Tatars repeatedly creolize, craft and collide a political and imagined geography to topple our brittle notions of identity, language, and beliefs. Throughout their 10 year practice, the artist collective has turned to Turkic language politics, medieval advice literature, the relationship between Iran and Poland, and transliteration, to name but a few of their areas of research. The artists' work (from sculptures to lecture performances, installations to publications) similarly overturn the traditional hierarchies of understanding, seeing, and listening. Slavs and Tatars aim to free knowledge from the Enlightenment confines of the mind. Exhibition: Ujazdowski Castle Centre for Contemporary Art, Warsaw, Poland (Nov 2016 - Feb 2017) / Pejman Foundation, Tehran, Iran (Apr 2017) / Salt Galata, Istanbul, Turkey (Jun 2017) / CAC Vilnius, Lithuania (Sep 2017) / Museum of Contemporary Art, Belgrade, Serbia (Nov 2017) / Albertinum, Dresden, Germany (Winter 2017-2018).

Statistical Process Control Robert James Oakland, John S Oakland, 2018-10-08 The business, commercial and public-sector world has changed dramatically since John Oakland wrote the first edition of Statistical Process Control - a practical guide in the mid-eighties. Then people were rediscovering statistical methods of 'quality control' and the book responded to an often desperate need to find out about the techniques and use them on data. Pressure over time from organizations supplying directly to the consumer, typically in the automotive and high technology sectors, forced those in charge of the supplying production and service operations to think more about preventing problems than how to find and fix them. Subsequent editions retained the 'took kit' approach of the first but included some of the 'philosophy' behind the techniques and their use. The theme which runs throughout the 7th edition is still processes - that require understanding, have variation, must be properly controlled, have a capability, and need improvement - the five sections of this new edition. SPC never has been and never will be simply a 'took kit' and in this book the authors provide, not only the instructional guide for the tools, but communicate the management practices which have become so vital to success in organizations throughout the world. The book is supported by the authors' extensive and latest consulting work within thousands of organisations worldwide. Fully updated to include real-life case studies, new research based on client work from an array of industries, and integration with the latest computer methods and Minitab software, the book also retains its valued textbook quality through clear learning objectives and end of chapter discussion questions. It can still serve as a textbook for both student and practicing engineers, scientists, technologists, managers and for anyone wishing to understand or implement modern statistical process control techniques.

Systems Performance Brendan Gregg, 2014 The Complete Guide to Optimizing Systems Performance Written by the winner of the 2013 LISA Award for Outstanding Achievement in System Administration Large-scale enterprise, cloud, and virtualized computing systems have introduced serious performance challenges. Now, internationally renowned performance expert Brendan Gregg has brought together proven methodologies, tools, and metrics for analyzing and tuning even the most complex environments. Systems Performance: Enterprise and the Cloud focuses on Linux® and Unix® performance, while illuminating performance issues that are relevant to all operating systems. You'll gain deep insight into how systems work and perform, and learn methodologies for analyzing and improving system and application performance. Gregg presents examples from bare-metal systems and virtualized cloud tenants running Linux-based Ubuntu®, Fedora®, CentOS, and the illumos-based Joyent® SmartOS™ and OmniTI OmniOS®. He systematically covers modern systems performance, including the "traditional" analysis of CPUs, memory, disks, and networks, and new areas including cloud computing and dynamic tracing. This book also helps you identify and fix the "unknown unknowns" of complex performance: bottlenecks that emerge from elements and interactions you were not aware of. The text concludes with a detailed case study, showing how a real cloud customer issue was analyzed from start to finish. Coverage includes • Modern performance analysis and tuning: terminology, concepts, models, methods, and techniques • Dynamic tracing techniques and tools, including examples of DTrace, SystemTap, and perf • Kernel internals: uncovering what the OS is doing • Using system observability tools, interfaces, and frameworks • Understanding and monitoring application performance • Optimizing CPUs: processors, cores, hardware threads, caches, interconnects, and kernel scheduling • Memory optimization: virtual memory, paging, swapping, memory architectures, busses, address spaces, and allocators • File system I/O, including caching • Storage devices/controllers, disk I/O workloads, RAID, and kernel I/O • Network-related performance issues: protocols, sockets, interfaces, and physical connections • Performance implications of OS and hardware-based virtualization, and new issues encountered with cloud computing • Benchmarking: getting accurate results and avoiding common mistakes This guide is indispensable for anyone who operates enterprise or cloud environments: system, network, database, and web admins; developers; and other professionals. For students and others new to optimization, it also provides exercises reflecting Gregg's extensive instructional experience.

The Routledge Companion to Art in the Public Realm Cameron Cartiere, Leon Tan, 2020-10-20 This multidisciplinary companion offers a comprehensive overview of the global arena of public art. It is organized around four distinct topics, activation, social justice, memory and identity and ecology, with a final chapter mapping significant works of public and social practice art around the world between 2008-2018. The thematic approach brings into view similarities and differences in the recent globalization of public art practices, while the multidisciplinary emphasis allows for a consideration of the complex outcomes and consequences of such practices, as they engage different disciplines and communities and affect a diversity of audiences beyond the existing 'art world.' The book will highlight an international selection of artist projects that illustrate the themes. This book will be of interest to scholars in contemporary art, art history, urban studies, and museum studies.
