Quantum Brain Dynamics and Consciousness Mari Jibu, 1995

This introduction to quantum brain dynamics is accessible to a broad interdisciplinary audience. The authors, a brain scientist and a theoretical physicist, present a new quantum framework for investigating advanced functions of the brain such as consciousness and memory. The book is the first to give a systematic account, founded in fundamental quantum physical principles, of how the brain functions as a unified system. It is based on the quantum field theory originated in the 1960s by the great theoretical physicist, Hiroshi Umezawa, to whom the book is dedicated. It poses an alternative to the dominant conceptions in the neuro- and cognitive sciences, which take neurons organized into networks as the basic constituents of the brain. Certain physical substrates in the brain are shown to support quantum field phenomena, and the resulting strange quantum properties are used to explain consciousness and memory. This change of perspective results in a radically new vision of how the brain functions.

Space Odyssey Michael Benson, 2019-04-23 The definitive story of the making of 2001: A Space Odyssey, acclaimed today as one of the greatest films ever made, and of director Stanley Kubrick and writer Arthur C. Clarke—"a tremendous explication of a tremendous film....Breathtaking" (The Washington Post). Fifty years ago a strikingly original film had its premiere. Still acclaimed as one of the most remarkable and important motion pictures ever made, 2001: A Space Odyssey depicted the first contacts between humanity and extraterrestrial intelligence. The movie was the product of a singular collaboration between Stanley Kubrick and science fiction visionary Arthur C. Clarke. Fresh off the success of his cold war satire Dr. Strangelove, Kubrick wanted to make the first truly first-rate science fiction film. Drawing from Clarke's ideas and with one of the author's short stories as the initial inspiration, their bold vision benefited from pioneering special effects that still

look extraordinary today, even in an age of computer-generated images. In *Space Odyssey*, author, artist, and award-winning filmmaker Michael Benson “delivers expert inside stuff” (San Francisco Chronicle) from his extensive research of Kubrick’s and Clarke’s archives. He has had the cooperation of Kubrick’s widow, Christiane, and interviewed most of the key people still alive who worked on the film. Drawing also from other previously unpublished interviews, *Space Odyssey* provides a 360-degree view of the film from its genesis to its legacy, including many previously untold stories. And it features dozens of photos from the making of the film, most never previously published. “At last! The dense, intense, detailed, and authoritative saga of the making of the greatest motion picture I’ve ever seen...Michael Benson has done the Cosmos a great service” (Academy Award-winning actor Tom Hanks).

The SAGE Handbook of Marxism Beverley Skeggs, Sara R. Farris, Alberto Toscano, Svenja Bromberg, 2021-11-17 The past decade has witnessed a resurgence of interest in Marxism both within and without the academy. Marxian frameworks, concepts and categories continue to be narratively relevant to the features and events of contemporary capitalism. Most crucially, an attention to shifting cultural conditions has lead contemporary researchers to re-confront some classical and essential Marxist concepts, as well as elaborating new critical frameworks for the analysis of capitalism today. The *SAGE Handbook of Marxism* showcases this cutting-edge of today’s Marxism. It advances the debate with essays that rigorously map and renew the concepts that have provided the groundwork and main currents for Marxist theory, and showcases interventions that set the agenda for Marxist research in the 21st century. A rigorous and challenging collection of scholarship, this book contains a stunning range of contributions from contemporary academics, writers and theorists from around the world and across disciplines, invaluable to scholars and graduate students alike. Complete Works of Aniruddha Bose Volume 4 Aniruddha Bose ,2022-06-22 This volume is collection of three English murder-suspense-thrillers

If Aniruddha Bose ,2021-03-08 There are fictions and there are genres. Some fictions follow certain standard routes of the established genres, while on rare occasions some fictions create their own genres. That new genres might become established later or may wither away. Only future could decide their fate. But an author who treads on a new path to create a new genre is a pioneer. The spirit always deserves a salute. Such is the new novel by Aniruddha Bose “If ...”. It treads along a comparatively new path. What is it? A sci-fi? A whodunit mystery thriller? Or a combination of both? The core idea is not new. Energy crisis and finding a new source of energy is a burning issue to the humankind. Fossil fuel will inevitably finish soon, it is just a matter of time. What next? Nuclear fission energy? Harnessing fusion energy? Wind energy? Tidal energy? Solar energy? Geothermal energy? Biofuel energy? These are only a few of the next possible sources of energy. And it is an established fact that big powers will go to any extent to own the newer sources of energy. In this background Aniruddha has woven the story of his novel. A completely new form of energy is almost in the hand of an Indian businessman with a strong scientific background and the source lies in the ancient Indian scripts. As usual, all the international players are in the arena with their sinister motives and men and women are murdered right and left. The rest of the story I cannot divulge here for obvious reasons.

Ideas Matter Richard English, Joseph Morrison Skelly, 2000 In Ideas Matter a wide array of Irish and international figures pay tribute to Conor Cruise O'Brien, with a collection of original essays on a wide range of issues which fascinated O'Brien: Irish history and politics, the United Nations, the Middle East, African affairs, American studies, the interplay of literature and politics, Edmund Burke, deTocqueville, Camus, and W.B. Yeats. They also reflect, with admiration and affection, on the highlights of a remarkable career. The broad reach of these topics underscores the scope of O'Brien's concerns. This book will be of interest to students of the humanities and political sciences.

Political Theory for Mortals John E. Seery, 2018-10-18 Despite an abundance of violence occurring in political contexts, no liberal political theorist since Thomas Hobbes has talked directly and coherently about death. John E. Seery does. He contends that liberalism desperately needs a theoretical framework in which to discuss pressing matters of human mortality. Among the contemporary political issues that cry out for theoretical articulation, Seery suggests, are abortion politics, ethnic cleansing, suicide assistance, national reparations, environmental degradation, and capital punishment. Seery offers a new conception of social contract theory as a framework for confronting death issues. He urges us to look to an older tradition of descent into an underworld, wherein classic theorists consulted poetically with the dead and acquired from them political insight and direction. In this lively book, Seery excavates the infernal tradition by rereading the politics of death in Platonism, early Christianity, and contemporary feminism. Building on those traditions, he proposes a new, constructive image of death that can serve democratic theory productively. Reconsidered from the

land of the shades, social contractarian theory is sufficiently altered that, for example, a pro-life Christian and a pro-choice secularist might be able to strike common ground upon which to discuss abortion politics.

90 Miles South Jeff Metzger,2005-08-01 90 MILES SOUTH is a story of adventure, culture shock, and ill-advised romance. A young American risks prison and fines by illegally smuggling himself into Cuba. He grows obsessed with the crumbling streets of Havana--the history, the politics, and most of all, the people. But at the same time, he feels a searing pain every time he opens his eyes to the ubiquitous poverty and prostitution. And, of course, there is a girl Our somewhat befuddled hero grows infatuated with a beautiful girl of dubious profession, but he does not seem to be psychologically capable of taking that step from his suburban universe to a relationship with a Magdalene of the third world. But he comes back this time as a reporter covering the pope's historic visit to Cuba in 1998. As he follows both the pope and the lovely Susanna around Havana, he attempts to solve the puzzle of politics, religion, and love on that mysterious island--and he finds himself entrenched in an exhausting wrestling match of values.

The Legendary Tauran'creima Johnny Littlejohn, Jr,2020-09-16 For eons, across the cosmos, there has been speculation of a star unlike any other. A star very unique. Yet, countless beings do not believe in such things. However, all those disbeliefs are put to rest when strange events start occurring. A mysterious character emerges, its intentions cryptic. Yet, something about this individual gradually eases the tension amidst those doubtful, as the powerful light about the entity makes its motive, its purpose, known to all.

reduced list price During the last 50 years, coincident with the Space Age, cosmic evolution has been recognized as the master narrative of the universe, history writ large. Cosmic evolution includes physical, biological, and cultural evolution, and of these the latter is by far the most rapid. In this volume, authors with diverse backgrounds in science, history, anthropology, and more, consider culture in the context of the cosmos. How does our knowledge of cosmic evolution affect terrestrial culture?

Conversely, how does our knowledge of cultural evolution affect our thinking about possible cultures in the cosmos? Are life, mind, and culture of fundamental significance to the grand story of the cosmos that has generated its own self-understanding through science, rational reasoning, and mathematics? Might this lead to cultural evolution on a large enough scale to allow the universe to both create and steer itself toward its own destiny?
