Engineering Geology for Society and Territory - Volume 1 Giorgio Lollino, Andrea Manconi, John Clague, Wei Shan, Marta Chiarle, 2016-08-23 This book is one out of 8 IAEG XII Congress volumes and deals with climate change affecting different natural processes and environments, such as slope dynamics, water courses, coastal and marine environments, hydrological and littoral processes and permafrost terrain. Due to climate change, major effects are also expected on territorial planning and infrastructure, particularly in extreme climate regions. The volume and its contents aim to analyze the role of engineering geology and the solutions it may offer with respect to the ongoing environmental changes. Contributions regard the modeling of both the factors and the effects induced by climate change. Potential impacts of the climate change on the common practice and routine work of engineering geologists are also analyzed, with particular attention to the risk assessment and mitigation procedures and to the adaptation measures adopted. The Engineering Geology for Society and Territory volumes of the IAEG XII Congress held in Torino from September 15-19, 2014, analyze the dynamic role of engineering geology in our changing world and build on the four main themes of the congress: environment, processes, issues and approaches. The congress topics and subject areas of the 8 IAEG XII Congress

volumes are: Climate Change and Engineering Geology. Landslide Processes. River Basins, Reservoir Sedimentation and Water Resources. Marine and Coastal Processes. Urban Geology, Sustainable Planning and Landscape Exploitation. Applied Geology for Major Engineering Projects. Education, Professional Ethics and Public Recognition of Engineering Geology. Preservation of Cultural Heritage.

Immunosensors Minhaz Uddin Ahmed, Mohammed Zourob, Eiichi Tamiya, 2019-08-28
Immunosensors are widely used and are particularly important for fast diagnosis of diseases in remote environments as well as point-of-care devices. In this book, expert scientists are covering a selection of high quality representative examples from the past five years explaining how this area has developed. It is a compilation of recent advances in several areas of immunosensors for multiple target analysis using laboratory based or point-of-care set-up, for example graphene-, ISFET- and nanostructure-based immunosensors, electrochemical magneto immunosensors and nanoimprinted immunosensors. Filling a gap in the literature, it showcases the multidisciplinary, innovative developments in this highly important area and

provides pointers towards commercialisation. Delivering a single, comprehensive work, it appeals to graduate students and professional researchers across academia and industry.

Mineralogy and Geochemistry of Gems Panagiotis Voudouris, Stefanos Karampelas, Vasilios Melfos, Ian Graham, 2020-03-10 Gems have been used in the manufacture of jewellery and as ornaments since antiquity. Considering gems, recent statistics have shown that about 15 billion Euros are annually at stake. Nowadays, gemmology, i.e., the study of gem materials, is one of the most expanding fields in the earth sciences, positioned between academia and industry. As an applied science, in gemmology, the instruments used should be non- or microdestructive, and their cost should be reasonable both in terms of equipment and time consumption. Gemmology can also be used contribute to the development of pure science and in some cases, destructive techniques may have to be used. Taking into account the fact that gems are albeit rarely available for scientific research, this compilation of 20 articles by around 100 researchers from over 30 different institutions situated in 20 countries from around the globe, presented in the Special Issue entitled "Mineralogy and Geochemistry of Gems", offers very good examples on the application of various methods for their study which will hopefully contribute to our better understanding of gem formation in general and will enhance scientific debates attracting more scientists from various disciplines to get involved in this field.

In a Dark Place Ed Warren,Lorraine Warren,Ray Garton,Carmen Reed,Al Snedeker,2014-10-04 The story of the most terrifying case of demonic possession in the United States. It became the basis for the hit film “The Haunting in Connecticut” starring Virginia Madsen. Shortly after moving into their new home, the Snedeker family is assaulted by a sinister presence that preys one-by-one on their family. Exhausting all other resources, they call up the world-renowned demonologists Ed and Lorraine Warren—who have never encountered a case as frightening as this... No one had warned the Snedekers their new house used to be an old funeral home. Their battle with an inexplicable and savage phenomena had only just begun. What started as a simple “poltergeist” escalated into a full-scale war, an average American family battling the deepest, darkest forces of evil—a war this family could not afford to lose.

The Science of Ghosts Joe Nickell,2012-07-03 Are ghosts real? Are there truly haunted places, only haunted people, or both? And how can we know? Taking neither a credulous nor a dismissive approach, this first-of-its-kind book solves those perplexing mysteries and more--even answering the question of why we care so very much. Putting aside purely romantic tales, this book

examines the actual evidence for ghosts--from eyewitness accounts to mediumistic productions (such as diaphanous forms materializing in dim light), spirit photographs, ghost-detection phenomena, and even CSI-type trace evidence. Offering numerous exciting case studies, this book engages in serious investigation rather than breathless mystifying. Pseudoscience, folk legends, and outright hoaxes are challenged and exposed, while the historical, cultural, and scientific aspects of ghost experiences and haunting reports are carefully explored. The author--the world's only professional paranormal investigator--brings his skills as a stage magician, private detective, folklorist, and forensic science writer to bear on a topic that demands serious study.

Calculus Paul A. Foerster, 2005 The acclaimed *Calculus: Concepts and Applications* is now available in a new edition, revised to reflect important changes in the Advanced Placement curriculum, and updated to incorporate feedback from instructors throughout the U.S. With over 40 years of experience teaching AP Calculus, Paul Foerster developed *Calculus: Concepts and Applications* with the high school student in mind, but with all the content of a college-level course. Like the previous edition, the second edition follows the AP Calculus curriculum for both AB and BC levels. In *Calculus: Concepts and Applications*, students start off with calculus! Review of precalculus occurs at various points when it's needed. The text combines graphing-calculator technology with a unique, real-world application approach, and presents calculus as a study of just four fundamental concepts: limits, derivatives, definite integrals, and indefinite integrals. Students learn these concepts using algebraic, numerical, graphical, and verbal approaches. As a result, students with a wider range of abilities can be successful in calculus, not just those who are strong in algebra. The accompanying set of Explorations in the Instructor's Resource Book, designed for cooperative group work, gives students hands-on experience with new topics before they are formally introduced. In this new edition, derivatives of transcendental functions, related rates, as well as area and volume applications of the definite integral are introduced earlier. Additionally, the Instructor's Resource Book includes projects utilizing the CBL, and, The

Geometer's Sketchpad ®, and Fathom Dynamic Statisticsâ„¢ software, giving students extended opportunities to explore and understand calculus in depth.

Policing Critical Incidents Laurence Alison,Jonathan Crego,2012-11-12 The aim of this book is to examine the qualities of leadership and decision-making in the police service. Based on groundbreaking research using unique, advanced methods for examining policing in complex critical incident environments, the book focuses principally on a series of police debriefs following live major critical incidents. It captures the views of the Senior Investigating Officers (SIOs) who worked on these cases and draws upon the very rich set of experiences that they have had in dealing with complex, stressful and demanding enquiries. The book provides an introduction to new methods for exploring leadership and decision-making in critical incidents. It will be an essential resource for developers of police training in leadership and decision-making, senior police officers involved in critical

incident management, organisational psychologists who work within policing, and for students whose area of study covers policing, decision-making or criminal investigation.

Classical Charged Particles Fritz Rohrlich, 2020-01-20 Widely-discussed in the theory of classical point charges are the difficulties of divergent self-energy, self-accelerating solutions, and pre-acceleration. This book explains the theory in the context of quantum electrodynamics, the neutral particle limit, and coherence with neighboring theories.

Sleep and Sleep Disorders: Malcolm Lader, Daniel P. Cardinali, S. R. Pandi-Perumal, 2009-11-06 Many recent discoveries in both laboratory and clinical settings have greatly increased our understanding of sleep medicine and the relevant psychopharmacology. This timely book serves to present updated information about the neuropsychopharmacology of sleep as this field enters mainstream psychiatry, neurology and medicine. This volume has assembled articles that summarize and review carefully, a chosen selection of the latest discoveries concerning sleep medicine, sleep physiology and sleep pharmacology. Outstanding contributions have been sought from acknowledged experts in their respective fields. The goal of the volume is to present the more recent developments and advances in the fields of sleep and neuropsychopharmacology, as well as to provide a context for considering them both in depth and from multidisciplinary perspectives. This volume brings together the collective expertise of clinicians and basic researchers who

represent a range of interests in neuroscience, neuropharmacology, sleep physiology, and biological rhythms. Presenting a thoughtful balance of basic experimental and clinical facts and viewpoints, this book will serve as a foundation for understanding, and ultimately treating, sleep disorders.
