**Cubed** Erno Rubik,2020-09-15 'More than just a memoir. A manifesto for a whole way of thinking' Daily Mail 'An idiosyncratic and gripping memoir about his life and the indomitable career of the Cube' Observer 'The rise and enduring power of the world's most popular puzzle toy . . . Cubed is less a memoir than a chronicle of Rubik's evolving relationship with his creation' Financial Times \*\*\* As a child, Erno Rubik became obsessed with puzzles of all kinds. **Network-on-Chip Architectures** Chrysostomos Nicopoulos, Vijaykrishnan Narayanan, Chita R. Das, 2009-09-18 [2]. The Cell Processor from Sony, Toshiba and IBM (STI) [3], and the Sun UltraSPARC T1 (formerly codenamed Niagara) [4] signal the growing popularity of such systems. Furthermore, Intel's very recently announced 80-core TeraFLOP chip [5] exemplifies the irreversible march toward many-core systems with tens or even hundreds of processing elements.

1.2 The Dawn of the Communication-Centric Revolution The multi-core thrust has ushered the gradual displacement of the computation-centric design model by a more communication-centric approach [6]. The large, sophisticated monolithic modules are giving way to several smaller, simpler processing elements working in tandem. This trend has led to a surge in the popularity of multi-core systems, which typically manifest themselves in two distinct incarnations: heterogeneous Multi-Processor Systems-on-Chip (MPSoC) and homogeneous Chip Multi-Processors (CMP). The SoC philosophy revolves around the technique of Platform-Based Design (PBD) [7], which advocates the reuse of Intellectual Property (IP) cores in flexible design templates that can be customized accordingly to satisfy the demands of particular implementations. The appeal of such a modular approach lies in the substantially reduced Time-To-Market (TTM) incubation period, which is a direct outcome of lower circuit complexity and reduced design effort. The whole system can now be viewed as a diverse collection of pre-existing IP components integrated on a single die.

**First IEEE/ACM International Symposium on Cluster Computing and the Grid** Rajkumar Buyya, George M. Mohay, Paul Roe, 2001 Annotation This collection of 85 papers from the May 2001 symposium presents developments in cluster and grid computing that enable applications to share resources and content across the Internet in a peer-to-peer manner. The main areas of discussion are component and agent approaches, input/output and databases, message passing, scheduling, and distributed shared memory. Some of the topics are design of a generic platform for scalable cluster computing based on middleware techniques, early experiences with the EGrid testbed, software environments for cluster-based display systems, the performance of CORBA for distributed and grid applications, sabotage-tolerance mechanisms for volunteer computing systems, and a tool kit for the simulation of application scheduling.
