Football and Risk Jan Andre Lee Ludvigsen, 2022-06-27 This is the first book to look closely at the concept of 'risk' in elite and professional football from a social scientific perspective. Drawing on the wider sociological, criminological and management literature on risk, it shows how football helps us to understand global risk more generally in present-day society. The book explores how attitudes to risk have shaped the modern football business, and identifies those risks that pose a threat to the sustainability of football in the future. It draws upon the work of theorists including Ulrich Beck, Anthony Giddens and Michel Foucault, as well as digital media sources and policy documents, and covers a range of topics, cases and themes including political, environmental and terrorism risks, technologies, the governance of fans and risk resistance. In the context of the social, globalized and commercialized realm of football, as well as a global pandemic that has had a profound influence on attitudes to risk, the book argues that modern societies' preoccupation with risk has transformed the ways in which modern football is played on the pitch, organized off the pitch, covered in the media and attended by fans. Including an extended case study of the 2026 World Cup, to be held in the USA, Mexico and Canada, this is a thought-provoking read for any student, researcher or policy-maker with an interest in football, sport, events, sociology, criminology or risk management.

Textbook of Sports and Exercise Cardiology Axel Pressler, Josef Niebauer, 2020-04-08 This textbook provides a comprehensive, yet practically orientated overview of classic and novel sports cardiology topics, based on current evidence, guidelines, recommendations and expert experience. Numerous publications have provided guidance to these issues, but it has become increasingly difficult for both students and doctors to obtain a thorough, but practicable overview for optimal clinical care of athletes and patients. This book is intended as an educational work, filling the large gaps that are still present in the current educational guidelines for medical students and cardiology trainees. Textbook of Sports and Exercise Cardiology differs from other sports cardiology books by focusing on clear, practical recommendations based on the latest evidence, primarily targeting those who seek professional background information and education that can easily be transferred into everyday care.

Routledge Handbook of Sport and Legacy Richard Holt, Dino Ruta, 2015-03-02 What remains of a great sporting spectacle after the last race is run or the final match is played? How can the vast expense of mounting such events be justified? What if there is nothing left behind or what if the legacy is negative, a costly infrastructure which is unused or a debt-ridden host city? The Routledge Handbook of Sport and Legacy addresses perhaps the most important issue in the hosting of major contemporary sporting events: the problem of 'legacy'. It offers a rigorous, innovative and comparative insight into this contested concept from interdisciplinary and practical perspectives. Major events must now have a conscious, credible and defined policy for legacy to meet public expectations. The book provides a comprehensive survey of the various kinds of legacy that can be delivered, as well as a close examination of the potential benefits and practical challenges involved in each. From 'hard' legacies, such as stadia and infrastructure, to 'soft' legacies including skill development, attitude change and capacity building, the book offers both a historical case study and an innovative strategic management approach, and establishes the limits of what can realistically be achieved in terms of economic, social, cultural, physical and sporting development. The Routledge Handbook of Sport and Legacy includes contributions from world leading scholars and practitioners and features detailed case studies of major sports events from around the world, including the FIFA World Cup and ten Olympics Games from London in 1908 to London 2012. It is invaluable reading for

students and researchers working in sport studies, events management, human geography, economics or planning, and an essential reference for any professional engaged in delivering legacy through sport.

Urban Informality in South Africa and Zimbabwe Inocent Moyo, Trynos Gumbo, 2021-01-09 This book adds to the research of urban informality in the Global South with a specific focus on South Africa and Zimbabwe. It addresses the agency and the potential transformative capacity of the phenomenon of urban informality in connection with Southern African cities and towns. It adopts a political economy approach to analyse the evolution of informality in cities and its implications for urban planning. It brings to bear how the South African and Zimbabwean historical and/or ideological and contemporary political and economic trajectories have impacted on the ever changing nature of urban informality, both spatially and structurally and/or compositionally; thus resulting in unique urban materialities, which are aspects that have scarcely been studied or discussed in the extant literature. This book, therefore, seeks to close the academic gap by dealing with the dearth of literature on spatial (re)locational discourses of urban informality. The work positions urban informality as a resilient force with potency in terms of political mobilisation and (re) shaping urban spaces. Though these are fundamental issues, they have received comparatively little attention, especially in literature that focuses on the Southern African region. Accordingly, undergraduate and post-graduate students, as well as academics in the fields of Urban Geography, Political Science, Development Studies, Sociology, Town and Regional Planning among others, will find the range of topics and depth of coverage in this book particularly valuable. Similarly, practitioners and activists on issues of urban informality and urban governance will find the book very useful.

Planning Theory Philip Allmendinger, 2017-09-16 In the 3rd edition of the leading introductory textbook to planning theory, Allmendinger provides a wide-ranging and up-to-date analysis of planning theories, how these relate to planning practice, and their significance. Moving away from a

linear, chronological model of progress over time from one paradigm to another, Allmendinger explains how and why different theories have gained dominance in particular places at particular times, giving the reader a holistic view of the field of scholarship and to demonstrate the relevance of planning theory for practise. Planning theory has undergone significant changes in recent decades as new theories and perspectives have emerged. Allmendinger takes care to detail the historical evolution of planning theory and the key philosophical issues involved so as enable the reader to both understand and critique theories as they encounter them. This much revised edition of Philip Allmendinger's text draws upon both established theories and expands its scope of current thinking around neoliberalism, post-colonialism and post-structuralist thinking on politics, space and scale. This unique approach to planning theory means this is an essential for all students completing planning theory courses in Urban or Planning studies, at both undergraduate and postgraduate level. New to this Edition: - Comprehensively revised and updated throughout - Greater international scope of coverage of theories and practice examples - Reflects the shift in planning theory to post-structuralism

Human Rights and Ocean Governance Mara Ntona, 2023-12-12 This book argues for the utility of human rights in the practice of ocean governance. Maritime spatial planning (MSP) has become the dominant marine management paradigm, with MSP frameworks already at various stages of elaboration and implementation in more than half of all coastal states. However, as experience with MSP accrues, a central systemic shortcoming has become apparent, insofar as the normative frameworks that underpin MSP tend to be grounded in a rationalistic and economistic worldview. The result is a post-political, neoliberal approach to the implementation of MSP, which favours technocratic 'fixes' to complex societal problems over efforts to address underlying issues of power and inequality. Building upon the new field of critical MSP studies, this book offers a much-neglected legal contribution. More specifically, it analyses the extent to which law, and particularly human rights law, can be utilised to meaningfully challenge the unjust patterns of human-ocean interaction that MSP preserves or creates, and so provide a vehicle for the formulation and realisation of transformative blue futures. The book looks to human rights as norms that are uniquely capable of bringing into relief the values, cause-and-effect relationships, and uncertainties that prevailing capitalist-industrial framings of the ocean tend to downplay or, worse, disregard. And so, from a more pragmatic viewpoint, the book argues that the policy and advocacy tools associated with human rights can be used within MSP processes to foster patterns of human-ocean interaction which are more conducive to social and environmental justice. This book will be of interest to legal and planning scholars, geographers, and others concerned with ocean governance and the 'blue turn' in the social sciences and humanities more generally.

Space and planning in secondary cities Lochner Marais, Verna Nel, 2019-09-01 Much of the urban research focuses on the large metropolitan areas in South Africa. This book assesses spatial planning in the second-tier cities of the country. Secondary cities are vital as they perform essential regional, and in some cases, global economic roles and help to distribute the population of a country more evenly across its surface. Apartheid planning left South African cities fragmented segregated and with low densities. Post-apartheid policies aim to reverse these realities by emphasising integration, higher densities and upgrading. Achieving these aims has been challenging and often the historical patterns continue. The evidence shows that two opposing patterns prevail, namely increased densities and continued urban sprawl. This book presents ten case studies of spatial planning and spatial transformation in secondary cities of South Africa. The book frames these case studies against complexity theory and suggests that the post-apartheid response to apartheid planning represents a linear deviation from history. The ten case studies then reveal how difficult it is for local decision-makers to find appropriate responses and how current responses often result in contradictory results. Often these cities are highly vulnerable and they find it difficult to plan in the context of uncertainty. The book also highlights how these cities find it difficult to stand on their own against the influence of interest groups (property developers, mining companies, traditional authorities, other spheres of government). The main reasons include weak municipal finance statements, the dependence on

national and provincial government for capital expenditure, limited investment in infrastructure maintenance, the lack of planning capacity, the inability to implement plans and the unintended and sometimes contrary outcomes of post-apartheid planning policies.

Sport, Community Regeneration, Governance and Development Rory Shand, 2017-06-26 Sporting mega events are playing an increasingly important role in the governance of community regeneration and development across the globe. This book examines the ways in which sporting organisations engage with local communities through projects that target youth, health or social issues and act as key partners in governance mechanisms. Showcasing original research to suggest that sporting organisations, mega events and legacies are now operating as governing instruments in renewal programmes, it sheds new light on the role that sport plays in community regeneration and development on an international scale. Drawing on the interpretivist approach to governance which bridges theory and practice, the book considers how relationships between sporting mega events,

legacies and local communities are evolving to foster trust and encourage participation. With international case studies from the UK, Brazil and South Africa, it reflects on best practice in relation to governance structure, funding mechanisms and partnerships. Sport, Community Regeneration, Governance and Development: A Comparative Global Perspective is fascinating reading for all students and scholars with an interest in governance, sport development, sport policy, sport management or the sociology of sport.
