Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Techniques for Evaluating the Differences in Multiregional Input-Output Databases Anne Owen, 2017-02-10 This book introduces the Eora, Global Trade Analysis Project (GTAP) and World Input-Output (WIOD) databases and provides detailed metadata on the data sources, database structures and construction techniques used to build each system. It offers a detailed account of how multi-regional input-output (MRIO) databases are used to calculate consumption-based accounts - guiding the reader through each mathematical step and explaining the associated equations. It demonstrates that different MRIO databases calculate different national level consumption-based CO2 accounts. If these results are to be used as evidence in climate policy-making, analysts need to be confident about the accuracy of the databases and understand why the results differ. It carefully explains the mathematical equations behind each technique and provides a link to a repository where the reader can access specially prepared MATLAB functions associated with the techniques. To make meaningful comparisons between the three MRIO databases, each is mapped to a consistent classification system comprising 40 countries and 17 sectors. Further, readers can access the aggregated databases using the link provided. The effect of this aggregation is shown to be minimal, so readers can be confident that the aggregated versions of each database reflect the full-sized versions. The book concludes by making recommendations as to how future MRIO databases could be accurately and consistently constructed and how they should be used in policy-making in light of the findings. Endorsement Anne Owen did a splendid job in comparing the most important Global Multiregional Input Output databases (GMRIO) available. She probably is the first to develop a good understanding what factors in GMRIO construction really contribute to uncertainties in carbon footprint analysis. A great achievement, packed in easy to understand language! Prof. Arnold Tukker Scientific director CML Leiden, NL With its thorough investigations and clear explanations of the differences in MRIO databases and outcomes, this book is compulsory reading for both skilled practitioners and scholars when starting any input-output analysis in a multiregional context. Dr.

Harry C. Wilting Senior researcher, environment and economics PBL Netherlands Environmental Assessment Agency, NL A novel exposition on understanding some of the biggest datasets underpinning current global sustainability assessments. Britain and European Monetary Cooperation, 1964-1979 Kiyoshi Hirowatari, 2016-09-23 The collapse of the Bretton Woods system in the early 1970s resulted in a transition to fluctuating rather than fixed currency system. This brought sterling into the turmoil of the world currency markets, and by the end of the 1970s, sterling had quietly ended its role as an international currency. Sterling-dollar diplomacy collapsed, bringing to an end what had hitherto been considered Britain's prime relationship. Britain and European Monetary Cooperation, 1964-1979 provides a unique perspective on these events, shedding light on the complexities of the historical context of British monetary diplomacy and exploring the country's attempt at a European approach to sterling in the 1960s and '70s. The book describes the political and economic approach Britain took at the turn of the 1970s, and explains how the country became restricted by the burden of the sterling balances. In this book, the author illustrates how these developments offered opportunity for both cooperation and conflict in the light of monetary diplomacy. He demonstrates how Britain's struggle to achieve exchange rate stability, twinned with controversy over European Economic Community membership, finally prompted serious reconsideration of economic policy-making. This book challenges the commonly-held perception of the decline of sterling, and explains that, although Britain's attempt at a European approach failed, the decline of the currency was more complicated than a 'managed decline'.
