Real Exchange Rates, Economic Complexity, and Investment Steve Brito, Mr. Nicolas E Magud, Mr. Sebastian Sosa, 2018-05-10 We show that the response of firm-level investment to real exchange rate movements varies depending on the production structure of the economy. Firms in advanced economies and in emerging Asia increase investment when the domestic currency weakens, in line with the traditional Mundell-Fleming model. However, in other emerging market and developing economies, as well as some advanced economies with a low degree of structural economic complexity, corporate investment increases when the domestic currency strengthens. This result is consistent with Diaz Alejandro (1963)—in economies where capital goods are mostly imported, a stronger real exchange rate reduces investment costs for domestic firms.

Pacific Island Countries Christopher Browne, David William Harold Orsmond, 2006-10 This paper examines the potential advantages and disadvantages of adopting a common currency arrangement among the six IMF member Pacific island countries that have their own national currency. These countries are Fiji, Papua New Guinea, Samoa, Solomon Islands, Tonga, and Vanuatu. The study explains that the present exchange rate regimes—comprising pegging to a basket of currencies for five countries and the floating arrangement for Papua New Guinea—have generally succeeded in avoiding inflationary, balance of payments, external debt, and financial system problems. The study concludes that adopting a common currency in the Pacific would require greater convergence of domestic policies and substantial strengthening of regional policies, which would take time to achieve.
