Cyberia (Cyberia, Book 1) Chris Lynch, 2014-11-25 *From National Book Award nominee Chris Lynch* Zane's wired life is about to be unplugged. . . Zane lives a life of luxury in a completely wired world. He doesn't ever have to leave his building to have exciting (virtual) experiences. His room knows everything he eats and what he needs for school. Even his pet dog is wired. There's only one problem: When Zane gets a device that enables animals to talk to him, he finds out that his world is a lie. The animals don't want to be wired -- they want to rebel. And Zane's going to be a part of their revolution, whether he likes it or not. In the process, he'll have to enter a world he's never confronted before: Nature. Join award-winning author Chris Lynch on a nonstop adventure through a not-so-distant future, where one lone kid has to prove he can be an animal's best friend.

Cyberia Douglas Rushkoff, 1994 . Rushkoff introduces us to Cyberia's luminaries, who speak with dazzling lucidity about the rapid-fire change we're all experiencing.

Monkey See, Monkey Don't (Cyberia, Book 2) Chris Lynch, 2014-11-25 From National Book Award nominee Chris Lynch, the second action-and-humor-filled futuristic series about talking pets who are tired of being pets ... and the boy who must help them. Zane has made an enemy for life in the evil scientist Dr. Gristle. Not only is Gristle angry about the damage Zane has done to his reputation, he's also extraordinarily jealous of Zane's ability to use technology to talk to animals. The result? He's now working on a new device to control animals' movements and speech - and Zane's dog, Hugo, is one of the first targets.

Dust Or Magic, Creative Work in the Digital Age Bob Hughes, 2007 A book for the interface workers. Dust or Magic was primarily written for the young, talented people whose creative instincts are kindled by computers and live to create 'good stuff', but who are systematically betrayed by the managerial types in suits who hire them, set them absurd tasks, and sack them when their half-baked schemes go belly-up. It is also for people who simply want to know how human creativity fares in the digital age. Originally published by Addison-Wesley (under the title 'Dust or Magic, Secrets of successful multimedia design') this book is, in part, a 'secret history' of computers: a history told from the vantage point of the people who did the work. We have insiders' accounts of a range of influential products and projects, many of which were in danger of being forgotten. The scene is illuminated by recent insights into creativity and well-being from the fields of psychology and neuroscience, as well as tried-and-tested, practical strategies for workplace survival from other industries. The author, Bob Hughes, has been a 'creative' for most of his working life: first a calligrapher, then an advertising artist and copywriter before discovering computers in the mid-1980s. He now teaches at Oxford Brookes University on the MA in Interactive Media Publishing, and researches and writes about the wider impact of electronics and computers in workplaces world-wide. He also campaigns on behalf of migrants, refugees and all precarious workers. What you are doing is stripping away the corporate bullshit from this 'revolution' - it's ours not theirs. Reclaim the pixels - Chris McEvoy (Creator of 'Usability Must Die' www.usabilitymustdie.com). There are many books explaining why software projects go sour; this one breaks the mold by showing how they come good. - Malcolm Cook (Senior Lecturer in Human Factors, University of Abertay) It was

incredibly engrossing. I expected to skim through it, and found myself reading it avidly, putting aside all the other work I should have been doing... It rang so true about so many things about the process of creating the virtual world we spend so much time in that I'm dying to share it with others who also create for it, or want to. - Aleen Stein (co-founder of the Voyager Company and CEO of Organa inc. www.organa.com). Computational Science and High Performance Computing IV Egon Krause, Yurii Shokin, Michael M. Resch, Dietmar Kröner, Nina Shokina, 2011-01-21 This volume contains 27 contributions to the Forth Russian-German Advanced Research Workshop on Computational Science and High Performance Computing presented in October 2009 in Freiburg, Germany. The workshop was organized jointly by the High Performance Computing Center Stuttgart (HLRS), the Institute of Computational Technologies of the Siberian Branch of the Russian Academy of Sciences (ICT SB RAS) and the Section of Applied Mathematics of the University of Freiburg (IAM Freiburg) The contributions range from computer science, mathematics and high performance computing to applications in mechanical and aerospace engineering. They show a wealth of theoretical work and simulation experience with a potential of bringing together theoretical mathematical modelling and usage of high performance computing systems presenting the state of the art of computational technologies.

Religion Hent de Vries, 2008 What do we talk about when we talk about religion? Is it an array of empirical facts about historical human civilizations? Or is religion what is in essence unpredictable--perhaps the very emergence of the new? In what ways are the legacies of religion--its powers, words, things, and gestures--reconfiguring themselves as the elementary forms of life in the twenty-first century? Given the Latin roots of the word religion and its historical Christian uses, what sense, if any, does it make to talk about religion in other traditions? Where might we look for common elements that would enable us to do so? Has religion as an overarching concept lost all its currency, or does it ineluctably return--sometimes in unexpected ways--the moment we attempt to do without it? This book explores the difficulties and double binds that arise when we ask What is religion? Offering a marvelously rich and diverse array of perspectives, it begins the task of rethinking religion and religious studies in a contemporary world. Opening essays on the question What is religion? are followed by clusters exploring the relationships among religion, theology, and philosophy and the links between religion, politics, and law. Pedagogy is the focus of the following section. Religion is then examined in particular contexts, from classical times to the present Pentacostal revival, leading into an especially rich set of essays on religion, materiality, and mediatization. The final section grapples with the ever-changing forms that religion is taking, such as spirituality movements and responses to the ecological crisis. Featuring the work of leading scholars from a wide array of disciplines, traditions, and cultures, Religion: Beyond a Concept will help set the agenda for religious studies for years to come. It is the first of five volumes in a collection entitled The Future of the Religious Past, the fruit of a major international research initiative funded by the Netherlands Organization for Scientific Research.

Cyberia Tim Rowe, 2014-09-06 Malachi Smith regains consciousness on the floor of a hospital ward, beside the body of a murdered girl. With a head wound impeding his memory, he tries to evade the authorities, but soon finds himself also hunted by drones and local militia. Set in 2097 - following the effects of population expansion, climate change and accelerated resource consumption - *Cyberia* depicts a world controlled by a single government dictatorship, where humanity exists in a lattice of tunnels beneath the Earth's crust, and every activity is controlled, monitored and analysed to identify deviant behaviour. The few individuals who escape join communities in the ruined remains of what used to be cities, but without law enforcement, these societies degenerate and are run by criminal organisations dealing in arms, narcotics and prostitution. While government forces struggle to regain control of the surface, a pandemic (an amalgamation between influenza and the Ebola virus) is rapidly spreading. As Malachi uncovers more of the puzzle pieces surrounding his situation, the picture they portray is disturbing and strange.... www.tim-rowe.co.uk

The Computable City Michael Batty, 2024-03-26 How computers simulate cities and how they are also being embedded in cities, changing our behavior and the way in which cities evolve. At every stage in the history of computers and communications, it is safe to say we have been unable to predict what happens next. When computers first appeared nearly seventy-five years ago, primitive computer models were used to help understand and plan cities, but as computers became faster, smaller, more powerful, and ever more ubiquitous, cities themselves began to embrace them. As a result, the smart city emerged. In *The Computable City*, Michael Batty investigates the circularity of this peculiar evolution: how computers and communications changed the very nature of our city models, which, in turn, are used to simulate systems composed of those same computers. Batty first charts the origins of computers and examines how our computational urban models have developed and how they have been enriched by computer graphics. He then explores the sequence of digital revolutions and how they are converging, focusing on continual changes in new technologies, as well as the twenty-first-century surge in social media, platform economies, and the planning of the smart city. He concludes by revisiting the digital transformation as it continues to confound us, with the understanding that the city, now a high-frequency twenty-four-hour version of itself, changes our understanding of what is possible.

The One to Watch Bruce Girard, 2003 The combination of the new information

and communication technologies (ICTs) and radio is opening up a range of possibilities for communication in the developing world. Broadcasters who used to have to travel for hours to find a public library to research a programme, now have instant access to the internet, whilst national, regional and global radio news agencies are making world news and alternative perspectives available to even the most remote communities. These developments are also helping to keep communities together, despite the distances imposed by migration trends. The case studies in this book demonstrate the value of converging radio and new ITCs for development and suggest that radio will have even greater significance and value in the future. The book is based on the findings of a FAO international workshop, held in February 2001.

Zofia Kulik Agata Jakubowska, 2020-07-30 Zofia Kulik's rich artistic career has a dual nature. Between 1970 and 1987, she worked alongside Przemysław Kwiek as a member of the duo KwieKulik, after which she began to develop a successful individual career. While KwieKulik's work has been well established as central to the East European neo-avant-garde art lexicon of the 1970's and '80s, Kulik's solo work has yet to be examined in depth. The first publication devoted solely to her work, this monograph analyzes the themes of her rich and complex oeuvre, addressing the (post)communist condition, artistic labor, intermediality, and the conditions of working as a female artist. The book forms a portrait of Kulik as an artist whose work is both deeply focused and rich in variations that reflect the socio-political shifts in her native Poland. With contributions from leading art historians, including Edit András, Angela Dimitrakaki, Ewa Lajer-Burcharth, Suzana Milevska, and Tomasz Załuski.
