Unauthorised Access Wil Allsopp,2010-03-25 The first guide to planning and performing a physical penetration test on your computer's security Most IT security teams concentrate on keeping networks and systems safe from attacks from the outside-but what if your attacker was on the inside? While nearly all IT teams perform a variety of network and application penetration testing procedures, an audit and test of the physical location has not been as prevalent. IT teams are now increasingly requesting physical penetration tests, but there is little available in terms of training. The goal of the test is to demonstrate any deficiencies in operating procedures concerning physical security. Featuring a Foreword written by world-renowned hacker Kevin D. Mitnick and lead author of *The Art of Intrusion* and *The Art of Deception*, this book is the first guide to planning and performing a physical penetration test. Inside, IT security expert Wil Allsopp guides you through the entire process from gathering intelligence, getting inside, dealing with threats, staying hidden (often in plain sight), and getting access to networks and data. Teaches IT security teams how to break into their own facility in order to defend against such attacks, which is often overlooked by IT security teams but is of critical importance Deals with intelligence gathering, such as getting access building blueprints and satellite imagery, hacking security cameras, planting bugs, and eavesdropping on security channels Includes safeguards for consultants paid to probe facilities unbeknown to staff Covers preparing the report and presenting it to management In order to defend data, you need to think like a thief-let *Unauthorised Access* show you how to get inside.

The book concludes with a discussion on security measures against client-side attacks, starting from the planning of security. This book will be of great value to penetration testers, security consultants, system and network administrators, and IT auditors. Design and implement your own attack, and test methodologies derived from the approach and framework presented by the authors Learn how to strengthen your network's host- and network-based defense against attackers' number one remote exploit—the client-side attack Defend your network against attacks that target your company's most vulnerable asset—the end user

Access Control, Authentication, and Public Key Infrastructure Bill Ballard,Tricia Ballard,Erin Banks,2010-10-22 PART OF THE NEW JONES & BARTLETT LEARNING INFORMATION SYSTEMS SECURITY & ASSURANCE SERIES! Access control protects resources against unauthorized viewing, tampering, or destruction. They serve as a primary means of ensuring privacy, confidentiality, and prevention of unauthorized disclosure. The first part of *Access Control*,

Authentication, and Public Key Infrastructure defines the components of access control, provides a business framework for implementation, and discusses legal requirements that impact access control programs. It then looks at the risks, threats, and vulnerabilities prevalent in information systems and IT infrastructures and how to handle them. The final part is a resource for students and professionals which discusses putting access control systems to work as well as testing and managing them.

Unauthorized Access Robert Sloan, 2017-07-27 Annotation This text provides an overview of non-governmental threats to privacy from private businesses and corporations. The authors explore the concept of informational privacy and suggest rules to limit the distribution of public information from private businesses.

Insider Threats Meet Access Control Abdulaziz M. Almeahmadi, Ph.d., 2016-10-28 Existing access control mechanisms are based on the concepts of identity enrollment and recognition, and assume that recognized identity is synonymous with ethical actions. However, statistics over the years show that the most severe security breaches have been the results of trusted, authorized, and identified users who turned into malicious insiders. Therefore, demand exists for designing prevention mechanisms. A non-identity-based authentication measure that is based on the intent of the access request might serve that demand. In this book, we test the possibility of detecting intention of access using involuntary electroencephalogram (EEG) reactions to visual stimuli. This method takes advantage of the robustness of the Concealed Information Test to detect intentions. Next, we test the possibility of detecting motivation of access, as motivation level corresponds directly to the likelihood of intent execution level. Subsequently, we propose and design Intent-based Access Control (IBAC), a non-identity-based access control system that assesses the risk associated with the detected intentions and motivation levels. We then study the potential of IBAC in denying access to authorized individuals who have malicious plans to commit maleficent acts. Based on the access risk and the accepted threshold established by the asset owners, the system decides whether to grant or deny access requests. We assessed the intent detection component of the IBAC system using experiments on 30 participants and achieved accuracy of 100% using Nearest Neighbor and SVM classifiers. Further, we assessed the motivation detection component of the IBAC system. Results show different levels of motivation between hesitation-based vs. motivation-based intentions. Finally, the potential of IBAC in preventing insider threats by calculating the risk of access using intentions and motivation levels as per the experiments shows access risk that is different between unmotivated and motivated groups. These results demonstrate the potential of IBAC in detecting and preventing malicious insiders.

Achieving the Sustainable Development Goals in South Asia United Nations Economic and Social Commission for Asia and the Pacific, 2017-05-30 Global progress on the Sustainable Development Goals will depend to a large extent on the collective action of South Asia to implement them. The sub-region indeed accounts for almost one fourth of the world's population, 36 per cent of the world's poor and nearly half of the world's malnourished children. The sub-region's success in implementing the 2030 Agenda for Sustainable Development, however, hinges on addressing current capacity gaps and strengthening the means of implementation. Recognizing the host of challenges faced by the sub-region, UNESCAP has attempted in the present Report, to unpack the 2030 Agenda at the sub-regional level, outlining tangible, high priority and relevant policy actions that are critical to achieve sustainable development in South Asia. The Report identifies seven key priorities that can help accelerate the SDG achievement in South Asia by leveraging the relationships between the Goals. Based on rigorous policy simulations and evidence, it offers insight into ways a regionally coordinated sustainable industrialization strategy could generate more than 56 million new jobs by 2030 in South Asia, and lift 71 million additional people out of poverty, relative to a business-as-usual scenario. It is hoped that this Report will be useful for analysts and practitioners of development policy in the sub-region and beyond, in stimulating a debate on the ways and means of bringing sustainable prosperity to all in the dynamic and population subregion of

South Asia.
